# ENERGY MEASUREMENT TECHNOLOGY WITH VISION

## ONE SYSTEM – THREEFOLD BENEFITS

Energy management, power quality monitoring and residual current monitoring in a single system environment. That is what the comprehensive Janitza product range stands for. The software and hardware components are optimally tailored to one another. Profit from our total competence and comprehensive services across the entire product life cycle.

Further information on our products, software solutions and services, as well as interesting practical examples, can be found on our website [www.janitza.com](http://www.janitza.com). We look forward to hearing from you!

# 3in1

MADE  
IN  
GERMANY

Janitza GridVis®  
Network visualisation software

Janitza energy measurement  
devices

### 1. Energy management (per DIN EN ISO 50001)

- Reduces CO<sub>2</sub> emissions
- Reduces energy costs
- Improves energy efficiency

### 2. Power quality monitoring

- High-availability power supply
- Reduces downtimes
- Optimises maintenance

### 3. Residual current monitoring / fault current monitoring (RCM)

- Minimum effort for DGUV V3
- Improves supply reliability
- Identifies insulation faults faster
- Improves fire protection

Energy management  
DIN EN ISO 50001

Power quality  
DIN EN 50160

Residual current monitoring  
(RCM)

# ENERGY MANAGEMENT SYSTEMS

The reduction in energy costs can be a significant competitive factor, because in many industry sectors the energy costs constitute a relevant item on the company results. In this regard, the ISO 50001 standard aims to establish the framework conditions for an operational energy management system. Energy flows must be made transparent and they must be analysed, in order to sustainably save costs and decisively reduce energy consumptions and CO<sub>2</sub> emissions. It is also possible to identify problems in the energy supply with an energy management system.

In response to these requirements, Janitza has developed the ISO 50001-certified GridVis® software. The software offers the user the tool required for establishing an efficient, manageable and consistent energy management system. In this way, measures can be developed for the improvement of the energy efficiency of processes, systems and devices with the help of the measured data provided. The effect of the implemented measures is continuously monitored by the energy monitoring system, the results are verified for example with the help of key figures (KPIs) and quantity flow diagrams (Sankey).

- Energy management systems increase the (energy) efficiency of processes, systems and devices (ISO 50001, VDE 0100-801):
- Continuous energy monitoring helps with the rapid identification of significant deviations in the power supply. Furthermore, this monitoring also supports fulfilment of the taxation and regulatory aspects (German law on renewable energy sources, peak balancing per German electricity tax law, etc.).
- Through transparent energy flows it is possible to reduce the costs, minimise maintenance outlay and identify energy-intensive consumer devices:
- The visible reduction of energy consumptions and CO<sub>2</sub> emissions makes a contribution to environmental protection:
- MID-compliant devices from Janitza can be used in combination with GridVis® software for cause-related cost centre management. MID is a measuring instruments directive of the European Parliament, which includes such requirements as manipulation security and therefore provides legal certainty.

GridVis® KPI example – key figures are an important instrument for the energy manager

# POWER QUALITY

## System assurance and highly-availability power supply

Continuous monitoring of the power quality in all technical systems per IEC 61000-2-4 is essential, in order to avoid unnecessary repair costs and production downtimes.

The voltage in the grid nowadays is far removed from the ideal sinusoidal waveform. Voltage interruptions, transients, harmonics, flickers or start-up currents: Various different "grid feedback effects" change the sinusoidal character of the currents and thus also the power quality. Impermissible electrical loading and increased thermal losses are then a daily occurrence. This can result in the equipment operating in a restricted manner or its service life being adversely affected. This risks a production failure.

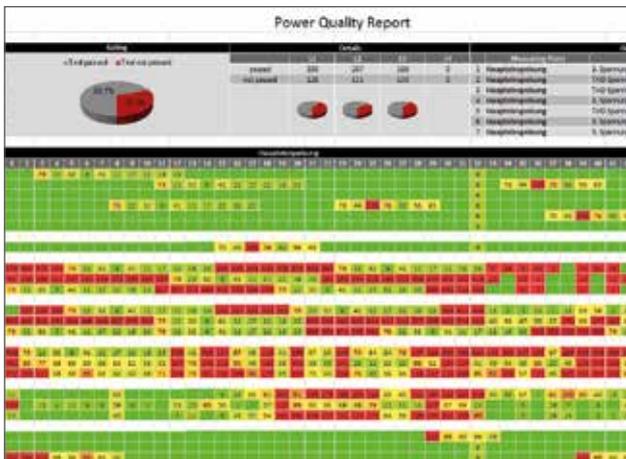

## Detect grid feedback effects promptly

Solid power quality management measures the power quality continuously, analyses the acquired data and highlights the central starting points for optimisation. In doing so, it also pursues the objective of reducing maintenance costs. For example, the class A power quality analyser UMG 512-PRO enables the power quality to be monitored in accordance

with the established standards, such as EN 50160, IEEE 519 or EN 61000-2-4. In addition, the device also measures flicker and harmonics up to the 63rd harmonic. The UMG 509-PRO also continuously monitors the power quality and provides analysis of electrical disturbances in the event of network problems. On the lower network levels, the UMG 96RM serves to record energy consumers and standard variables, as well as further basic power quality parameters.

## PQ reports with the GridVis® monitoring software

With the aid of meaningful reports, Janitza's TÜV-approved software GridVis® delivers sound and comprehensible information on the power quality. The GridVis® reporting system is the heart of the network analysis. The PQ reports provide a rapid overview of any standard and threshold value infringements that arise. Furthermore, they show whether the power quality is adequate or not within the time period in question. The traceability and tracking of the measured values is assured with the GridVis® software. Legal certainty is provided.

GridVis® PQ Heatmap

- Secure, highly-availability power supply  
Assured quality of the electrical energy through continuous monitoring and analysis.
- Avoidance of overload situations
- Avoidance of production stoppages
- Maximisation of operating times
- Ensuring product quality/stable processes  
Production-related quality assurance by monitoring the local power quality.
- Optimisation of the maintenance costs

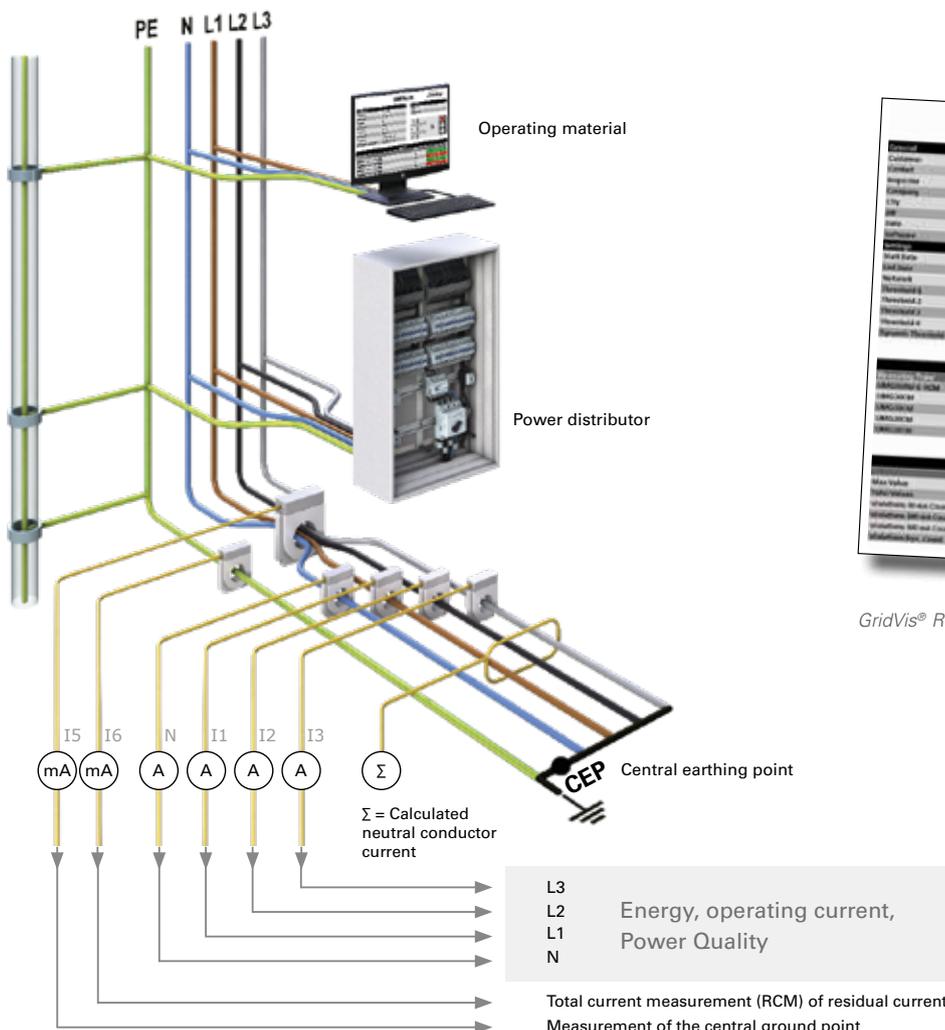

Residual current monitoring  
(RCM)

# RESIDUAL CURRENT MONITORING (RCM)

**Safe – modular – future-oriented**

Residual current monitoring (RCM) plays a decisive role in high-availability power supply systems. Constant measurement and early warnings can enable the rapid and direct localisation of faults and insulation problems. This applies in particular to quietly rising residual currents (e.g. triggered by an insulation fault), overly high operating currents and any other overloading of system parts and consumers. This not only protects against risks of fire but also increases the system availability. In this way, it is frequently possible to avoid costly shut-downs through residual current circuit breakers (RCD) and minimise servicing costs. With an electrical system or static operating equipment, complex insulation measurements within the framework of DGUV V3 are superfluous and this results in a significant reduction in testing outlay.

- Early alerts in the event of a possible overload
- Increased system and operational certainty
- Reduction in servicing costs
- Avoiding the risk of fire
- Significant outlay reduction with DGUV V3 testing

GridVis® RCM report

TN-S system (5-conductor network) – Basic precondition for the safe operation of IT equipment, machinery and networked systems including residual current monitoring

# MAXIMUM TRANSPARENCY JANITZA SOFTWARE SOLUTIONS

Janitza GridVis® software, the Janitza APPs and the Janitza energy portal make energy data transparent and therefore form a decision-making basis for implementing measures for the optimisation of energy efficiency and power quality. Energy data can be called up any time and anywhere, online through the GridVis® network visualisation software and the energy portal. The APPs simplify the devices in terms of reading out, processing and visualising the energy data. These can be interrogated via a browser.

## The Janitza Cloud solution

The cloud-based **energy portal** saves the customer acquisition and operating costs for software, database, server, and maintenance. It guarantees the highest levels of data security and more than anything else, is simple to use. The system architecture is flexible, scalable and can be individually configured. This enables the optimising of energy efficiency in the company, on the basis of key figures and their progressions – but also the current, gas and water consumption.

# GridVis®

## NETWORK VISUALISATION

Janitza GridVis® version 7.2 is a powerful, user-friendly software solution for the development of **energy, RCM and power quality monitoring systems**. Alongside the programming and configuration of the Janitza measurement devices, the software can also be used for the documentation (reporting), as well as read-out, saving, display, processing and analysis of the measured data. With this, the comprehensive and scalable GridVis® is a

software solution for energy suppliers, industrial applications, facility management applications, the building market and infrastructure projects.

Energy saving potentials can be highlighted, energy costs reduced, production downtimes avoided and the utilisation of production resources optimised.

### GridVis® highlights

- Configuration of the measurement system and the UMG measurement devices
- Time planning with time period definition for time-controlled alarms, tariff formation and key figures formation
- Generic modbus devices, virtual meters
- Dashboards (individual web page customisation with widgets)
- Dashboard standard templates for GridVis® Energy
- Various widget and dashboard functional expansions for GridVis® Energy
- Automatic read-out of the measuring data from the device memory, alternatively cyclical querying possible through online recording (polling)
- Automatic CSV data import (e.g. for unit quantities, sales figures, energy meters without interface, etc.), e.g. for KPI calculations
- Minimum, average and maximum values can be displayed in a graph
- Real-time data and indicator function
- Manual or time-controlled reports
- PQ reports for freely configurable threshold values, annual assessments per EN50160, Heatmap and assessment functions
- RCM report, designed for the assessment of residual current infringements
- Saving the data in a central database including database management (e.g. MySQL / MS SQL / Janitza DB)
- Key figure evaluation (KPI)
- Sankey diagram (graphical representation of quantity flows)

# MONITORING SYSTEMS GERMANY

### Log energy data, display energy consumption, reduce costs

Nowadays, energy management is not only relevant for the environment and for society but is also a critical competitive factor. Only those who can keep a close eye on their energy consumption can reduce costs and increase efficiency. To ensure optimum use of the measurement devices, Janitza offers the corresponding accessories and tailored software – a complete package that guarantees efficient energy management.

# STANDARDISED SPECIFICATIONS

## DIN EN 16247-1

### Energy audit

- Defines the requirements for an energy audit
- One-off acquisition/analysis of the energy consumption
- Obligation for all non SMEs since 2015

## DIN EN ISO 50001

### Energy management systems

- Specifications for systematic energy management
- Precondition for the partial release of energy-intensive companies from the German law on renewable energy sources

## DIN VDE 0100-801

### Energy efficiency in low voltage systems

- Directive for planning energy distribution, also applies for retrofits to older systems
- Prescribes the use of energy measurement technology in all energy distribution systems

## DIN VDE 0100-801

### Energy efficiency in low voltage distribution systems

- Valid and binding since December 2015
- Electrical and practical supplement to ISO 50001
- Valid for new systems and the updating of older systems
- Measurement, monitoring and control of:  
Consumptions, load management, power quality, harmonics, voltage drop, optimum load utilisation of transformers (25-50%), reactive power load
- Recording the measured values = Basis for planning expansions

## DGUV V3

### Operating equipment testing

- Insulation testing: Can be minimised with continuous documentation of the residual currents

## EN 50160

### Power quality standard for energy suppliers

- "Incoming goods inspection - current"
- Enforceable product liability standard

## EN 61000-2-4

### Power quality standard within companies

- Threshold values for the loads of electronic components, caused by grid feedback
- Key phrase: Warranty claims

## Chapter 02 Energy and power quality measurement products

UMG 508 / UMG 509-PRO / UMG 604-PRO = Janitza power analyser

UMG 511 / UMG 512-PRO / UMG 605-PRO = Janitza power quality analyser

UMG 96RM / UMG 96RM-E / UMG 96-PA / UMG 103-CBM / UMG 104 = Janitza multifunction energy meters

UMG 20CM = Janitza 20 channel branch circuit monitoring device, for residual current monitoring (RCM) and energy data acquisition

# UMG 103-CBM

Universal measurement device for DIN rails

Harmonics

Modbus interface

GridVis®  
Analysis software

Measurement accuracy 0.5

### Communication

- Protocols: Modbus RTU / Slave

### Interface

- RS485

### Accuracy of measurement

- Energy: Class 0.5S (... / 5 A)
- Current: 0.5 %
- Voltage: 0.2 %

### Power quality

- Harmonics up to 25th order, odd harmonics
- Distortion factor THD-U
- Distortion factor THD-I

### Memory

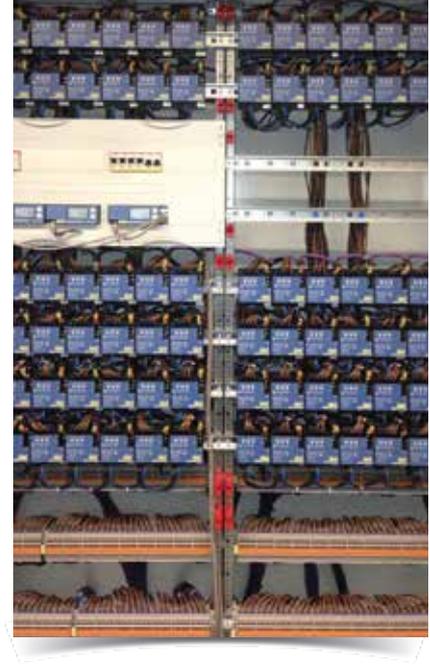

- 4 MB

### Networks

- TN, TT networks

### Network visualisation software

- Free GridVis®-Basic

## Areas of application

- Measurement and checking of electrical characteristics and energy consumption in energy distribution systems
- Cost centre management
- Threshold value monitoring, measured value transducer for building management systems or PLC
- Monitoring of harmonics

## Main features

### Power quality

- Harmonics analysis up to 25th harmonic, odd harmonics
- Distortion factor THD-U / THD-I
- Minimum and maximum values
- Measurement of positive, negative and zero sequence component

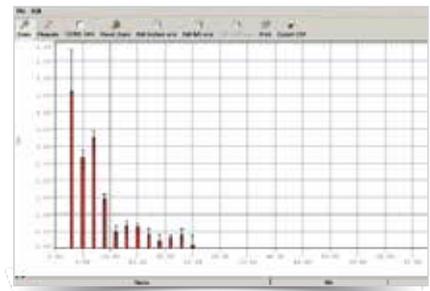

Fig.: GridVis® – Harmonics analysis (FFT)

### Features

- 3 Voltage measurement inputs (300 V CATIII)
- 3 Current measurement inputs
- Continuous sampling of voltage and current measurement inputs
- Measurement of the reactive distortion power
- Sampling frequency 5.4 kHz
- Transfer of the measured values via a serial interface
- Supply voltage via measurement voltage L1-N, L2-N and L3-N

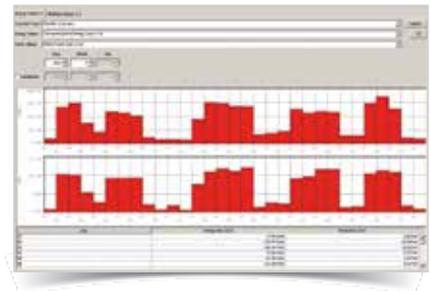

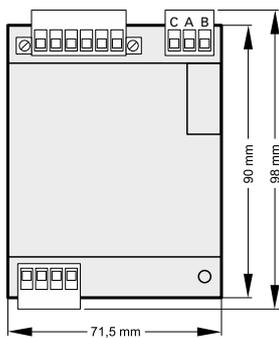

Fig.: GridVis® – Device dashboard with energy analysis

# UMG 104

Energy measurement device for DIN rails

### Added value through additional functions

The UMG 104 goes far beyond the limits of digital multifunction measurement devices thanks to the integration of additional functions:

- Multifunction measurement device
- State monitoring
- Data logger
- Meters (kWh, kvarh)
- Temperature monitoring
- Harmonics analyser

Due to the four current and voltage inputs there are also particular advantages with the monitoring of up to four single-phase outputs, e.g. in data centres, offices or single-phase motor outputs.

# UMG 20CM

## 20 Channel Branch Circuit Monitoring Device with RCM

## Areas of application

- Continuous acquisition of the operating currents
- Permanent residual current monitoring
- Messages in the event of the nominal current being exceeded
- Energy acquisition for complete current distribution
- Cost centre accounting
- Transparency of energy costs
- More effective use of IT infrastructure
- PDUs in data centres
- Increase of high availability power supply

## Main features

### RCM and energy measurement device in a single unit

- 20 current measurement channels +/- 0.5 %
- 3 voltage measurement channels +/- 0.5 %
- Internal RS485 interface (Modbus as Slave)
- 20 LEDs – One LED for each current channel (Green = o.k., Yellow = Warning; Red = Nominal current exceed)
- Measurement range of operation current with burden up to 63 A with closed or split core current transformers (standard measured values: V, A, kW, kVA, kVar, kWh)

### The system for smart people

- Compact nature of the system
- Can be retrofitted to existing systems
- Modbus RTU directly on board
- State indication per channel (LEDs)
- Name stored per channel in the measurement device
- Polarity reversal for the current channels
- Memory function for the messages of the threshold monitoring
- Wide range power adapter (90 – 276 V ... AC / DC)
- Integration in the GridVis® software
- Diverse current transformer variants for the individual application
- Measurement variants:
  - Three-phase and single-phase energy measurement
  - RCM measurement three-phase and single-phase
- High sampling rate 20,000 Hz
- Current transformer connection monitoring (i.e. wire break will be detected)
- Harmonics analysis up to 63rd harmonic via analysis channel
- Saving of minimum and maximum values with time stamp
- Standard measured values: V, A, kW, kVA, kVar, kWh (variable list)
- Scalability of the system

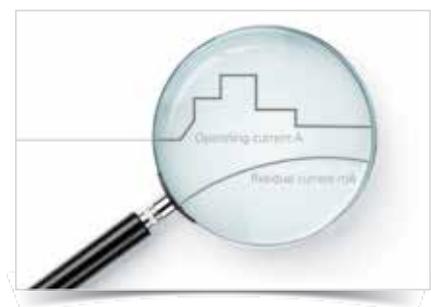

Fig.: Operating current and RCM fault current monitoring

# The system

## Power supply without drop-outs

- Permanent monitoring and logging of processes in TN-S or TN-C-S systems
- Simple parameterisation and operation of the RCM measurement
- Automatic reporting in the event of problems enables a rapid initiation of countermeasures
- Comprehensive diagnostics increase safety and efficiency of a company

## Alarms before failures (preventative residual current analysis)

- Faults arising will be detected in good time
- Monitoring, evaluation and reporting of creeping increases in residual currents (e.g. triggered by insulation faults and operating currents for system parts or loads being too high)
- Reduction of downtimes

## Sensors for energy management

- Energy data of a large number of loads can be acquired and passed to a database with ease
- Automatic reading out and saving of the measured values and data saved in the measurement devices as well as the exceedance of parameterised threshold values
- Channel-specific measured values of the current monitoring devices can be displayed via the GridVis® software
  - The progression of measured values is visualised graphically
  - Display of warnings or fault messages possible, e.g. via the topology views.
  - Associated message texts can be freely configured for this
  - Automatic sending of an email in the event of operational or fault messages
  - Remote monitoring of the entire system is possible via internet
  - Residual current and operational current monitoring devices can be parameterised via GridVis® (Modbus)
- The evaluation and saving of data in central databases is implemented via the GridVis® software
- The greater the scope of information, the more accurate the determination of savings potentials
- Energy optimisation offers a higher, more economical savings potential (ISO 50001)

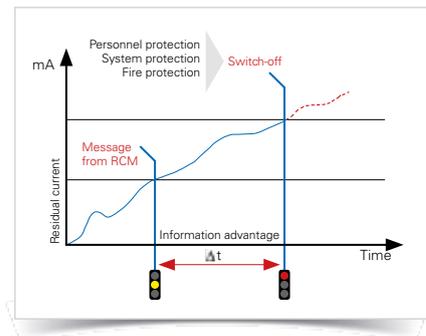

Fig.: Message before shut-down - an objective of residual current monitoring

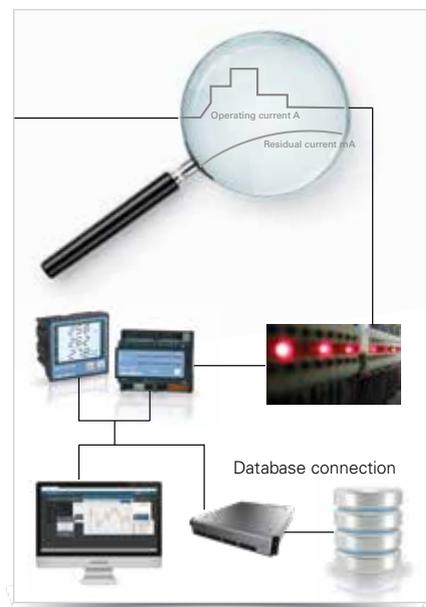

Fig.: Read-out, analysis and saving of energy data

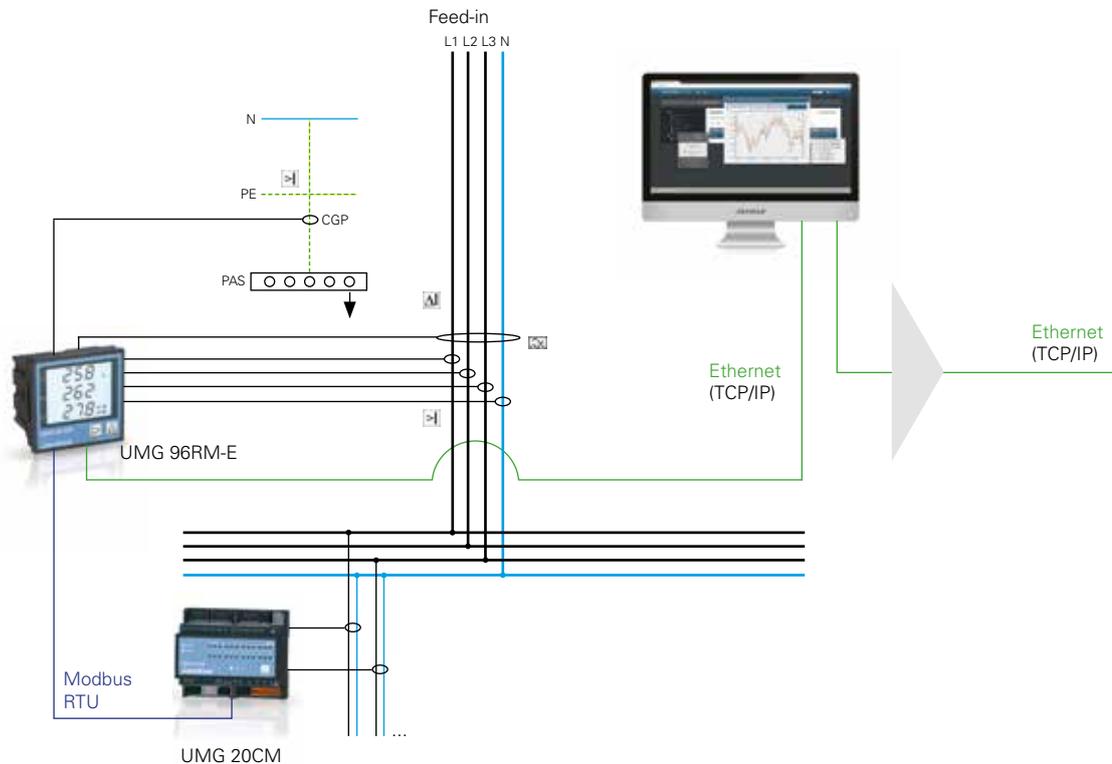

Fig.: The 20 channels of the UMG 20CM can be optionally used for residual current or operational current monitoring by utilising the corresponding current measurement transformer. In the case of residual current monitoring, the residual currents flowing to ground or any other path are acquired.

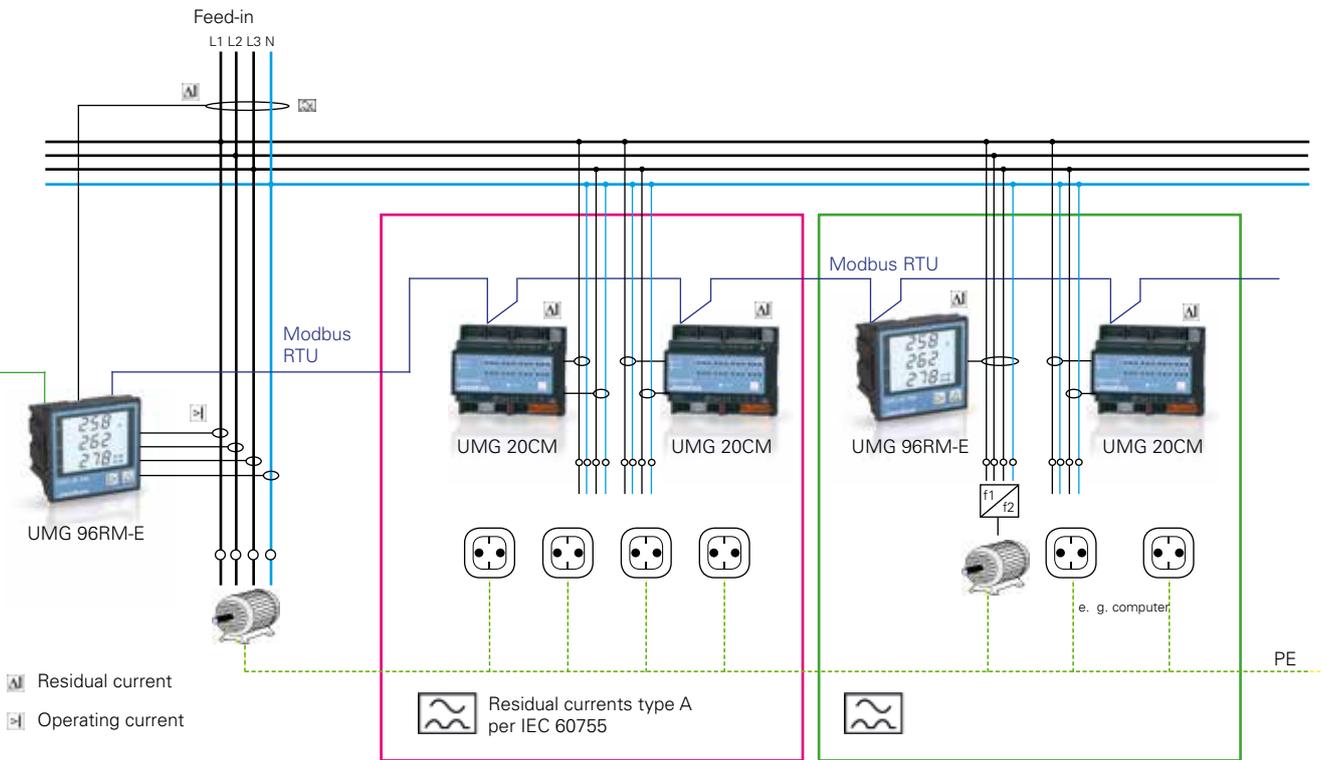

## Your benefits

### The intelligent system solution

- Early warning with system failures
- Avoidance of costly and hazardous system downtimes; the availability of systems is increased
- Localisation of individual faulty feeders, reduced work when troubleshooting
- Early detection of an overloading of the N conductor and critical residual currents, resulting in increased fire safety
- Through parameterisation of the system in new condition and constant monitoring, all changes to the system state after the point of commissioning can be detected
- Fulfilment of the safety criteria "RCM residual current monitoring" in data centres
- Convenient monitoring and parameterisation solution with GridVis® software
- Operating current acquisition of all relevant consumers as a basis for an energy management system (EnMS)

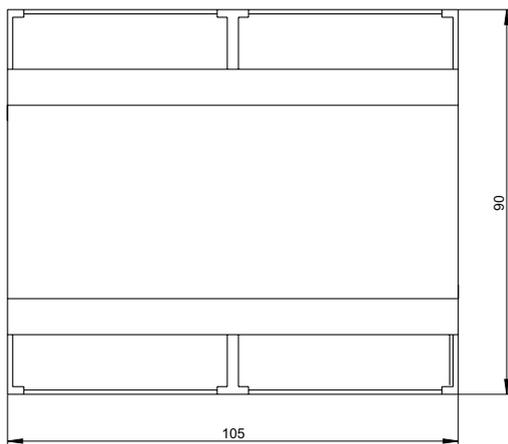

Fig.: Constant processes and highly sensitive applications such as data centres, are based on RCM monitoring.

Ethernet gateway

Homepage

Graphic  
programming

### Communication

- Profibus (DP/ V0)
- Modbus (RTU, UDP, TCP, Gateway)
- TCP/IP
- BACnet (optional)
- HTTP (configurable homepage)
- FTP (file transfer)
- SNMP
- TFTP
- NTP (time synchronisation)
- SMTP (email function)
- DHCP

### Interfaces

- Ethernet
- RS232
- RS485

### Accuracy of measurement

- Energy: Class 0.5S (... / 5 A)
- Current: 0.2 %
- Voltage: 0.2 %

### Peak demand management (optional)

- Up to 64 switch-off stages

### Power quality

- Harmonics up to 40th harmonic
- Short-term interruptions (> 20 ms)
- Transient recorder (> 50 µs)
- Starting currents (> 20 ms)
- Unbalance
- Full wave effective value recording (up to 4.5 min.)

### Networks

- IT, TN, TT networks
- 3 and 4-phase networks
- Up to 4 single-phase networks

### Measured data memory

- 128 MByte Flash

### Programming language

- Jasic®

### 2 digital inputs

- Pulse input
- Logic input
- State monitoring
- HT / LT switching

### 2 digital outputs

- Pulse output kWh / kvarh
- Switch output
- Threshold value output
- Logic output

(expandable via external I/O modules, see FBM modules in chapter 05)

### Temperature measurement

- PT100, PT1000, KTY83, KTY84

### Network visualisation software

- Free GridVis®-Basic

## Areas of application

- Master device for energy management systems, (e.g. ISO 50001)
- Measurement, monitoring and checking of electrical characteristics in energy distribution systems
- Consumption data acquisition
- Monitoring of the power quality (harmonics, short-term interruptions, transients, starting currents, etc.)
- Measured value transducer for building management systems or PLC
- Control tasks e.g. depending on measured value or limit values being reached
- Peak demand management
- Ethernet gateway for subordinate measurement points
- Remote monitoring

## Main features

### Power quality

- Harmonics analysis up to 40th harmonic
- Unbalance
- Distortion factor THD-U /THD-I
- Measurement of positive, negative and zero sequence component
- Short-term interruptions (> 20 ms)
- Logging and storage of transients (> 50  $\mu$ s)
- Start-up processes
- Fault recorder function
- Rotary field indication

### DIN mounting rail (6TE):

#### Simple and cost-optimised installation

- Mounting on a 35 mm DIN rail
- Clear cost advantages in the switch cabinet construction through lower installation and connection effort
- Simple integration into the LVDB, in machinery construction, in installation subdistribution panel for building management systems, in IT and in data centres

### Modern communications architecture via Ethernet

- Rapid, cost-optimised and reliable communication through integration into an existing Ethernet architecture
- Integration in PLC systems and building management systems
- High flexibility due to the use of open standards
- Simultaneous polling of interfaces possible

Fig.: DIN rail mounting (6TE)

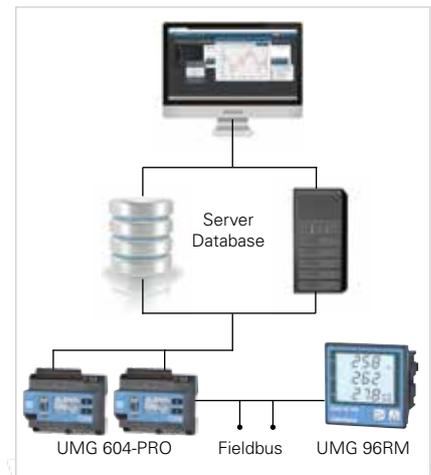

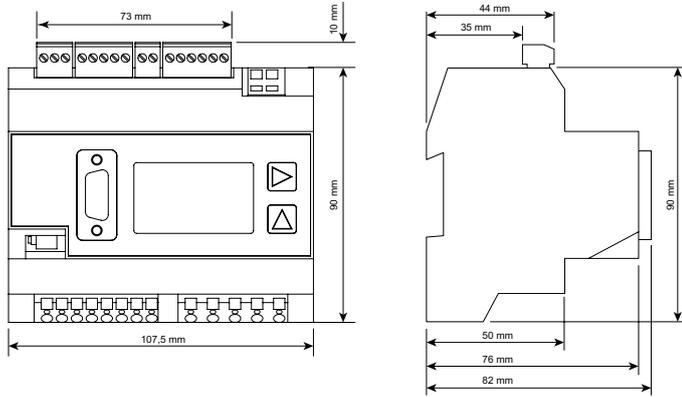

Fig.: Modern communication architecture

# Chapter 02

## UMG 604-PRO

# UMG 605-PRO

Power quality analysers for DIN rails

## Areas of application

- Power quality monitoring
- Ethernet gateway for subordinate measurement points
- Analysis of electrical disturbances in the event of network problems
- Report generator for various power quality standards
- Control tasks e.g. depending on measured value or limit values being reached
- Measured value transducer for building management systems or PLC

## Main features

### Power quality

- Continuous power quality monitoring (e.g. EN 50160)
- Harmonics analysis up to the 63rd harmonic, even and odd
- Interharmonics
- Distortion factor THD-U / THD-I
- Measurement of positive, negative and zero sequence component
- Flicker measurement in accordance with DIN EN 61000-4-15
- Logging and storage of transients ( $> 50 \mu\text{s}$ )
- Recording of short-term interruptions ( $> 10 \text{ ms}$ )
- Monitoring start-up processes
- Recorder for limit value events

Fig.: GridVis®- Flicker Monitoring

### Power

- 4 voltage and 4 current measurement inputs
- Logging and digitalisation of effective values (true RMS) of currents and voltages (15 – 440 Hz)
- Continuous sampling of the voltage and current measurement inputs at 20 kHz
- Recording of over 2,000 measured values per measurement cycle (200 ms)
- Stipulation of nominal current possible for measuring current events
- Fourth current measurement input is suitable for measuring the current in the neutral or PE conductor or for measuring any potential difference between N and PE.
- Large measured data memory (memory range = 5 000 000 measured values)
- Simple remote polling of measured data via the device's own homepage
- All interfaces can be used simultaneously
- Up to 4 ports can be accessed simultaneously

### Impressive reporting with GridVis®

- Automatic generation and sending of power quality reports
- Power quality reports per EN 50160, EN 61000-2-4, IEEE519
- Illustration of the ITI-(CBEMA) curve
- Freely definable time planning for the generation of reports

### Modern communications architecture via Ethernet

- Rapid, cost-optimised and reliable communication through integration into an existing Ethernet architecture
- Integration in PLC systems and building management systems
- High flexibility due to the use of open standards
- Simultaneous polling of interfaces possible

### Ethernet-Modbus gateway

- Simple integration of Modbus-RTU devices into an Ethernet architecture through the Modbus gateway function
- Integration of devices with identical file formats and matching function codes possible via Modbus RTU interface

### Powerful alarm management

- Can be programmed via the graphic programming or Jasic® source code
- All measured values can be used
- Can be arbitrarily, mathematically processed
- Individual forwarding via email sending, switching of digital outputs, writing to Modbus addresses etc.
- Watchdog APP
- Further alarm management functions via GridVis®-Service alarm management

Fig.: Automatic reporting

Fig.: Alarm management, alarm list (logbook)

**High-speed Modbus**

- Fast and reliable data exchange via RS485 interface
- Speed up to 921.6 kB/s

**Graphical programming**

- Comprehensive programming options on the device, 7 programs simultaneously (PLC functionality)
- Jasic® source code programming
- Functional expansions far beyond pure measurement
- Complete APPs from the Janitza library

**Convenient home page and email functions**

- Information can be received conveniently by email and via the device homepage
- Access to powerful device homepage via web browser
- Online data, historical data, graphs, events and much more, is available direct from the homepage

**Large measurement data memory**

- 128 MByte
- 5,000,000 saved values
- Recording range up to 2 years
- Recording freely configurable by the user

Fig.: Example for the connection of an S0 pulse transducer to digital input 2

# UMG 96L / UMG 96

## Universal measurement device

Threshold value monitoring

Pulse outputs

### Measuring accuracy

- Energy: Class 2
- Current .../1 A, .../5 A
- Voltage L - N:  $\pm 1\%$

### Networks

- TN-, TT-Networks

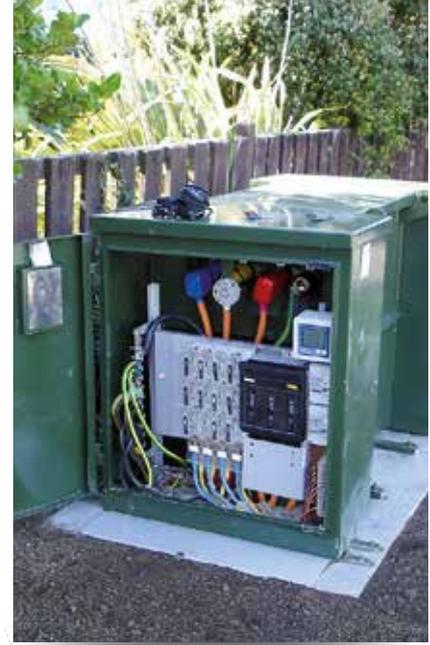

### 2 digital outputs (UMG 96)

- Pulse output kWh / kvarh
- Switch output

## Areas of application

- Replaces analogue measurement devices
- Display and checking of electrical characteristics in energy distribution systems
- Limit value monitoring

## Main features

### Display selection and automatic display rotation

- Generous LCD display
- All measured values can be called up in factory setting
- Measured values that are not required can be hidden and displayed again

### Operating hours counter

- The operating hours counter is active as soon as the device is switched on
- The time is measured with a resolution of 15 minutes
- Display in hours mode

### Digital outputs for reactive or active energy

- Transmission of the reactive and active energy via digital outputs
- The active energy should be assigned to output 1 and the reactive energy to output 2

Fig.: Effective power, all three phases at a glance

### Digital outputs for threshold values (UMG 96)

- Digital outputs also suitable for use as switch outputs
- Programming the digital outputs for threshold monitoring of measurement data
- Assignment of a measured value (threshold value) per switch output
- The associated output reacts in response to the value exceeding or dropping below the threshold value
- Transistor outputs

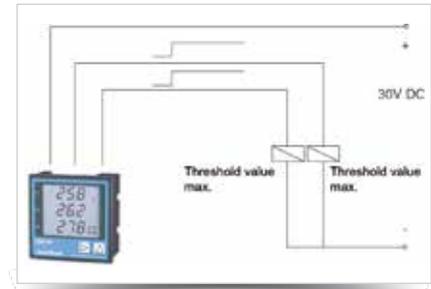

Fig.: Digital output for threshold value monitoring

### Password

- 3-digit password protects against unauthorised changing of the programming and configurations
- Changes in the following program menus can only be implemented after entering the correct user password
- Password is not factory-programmed

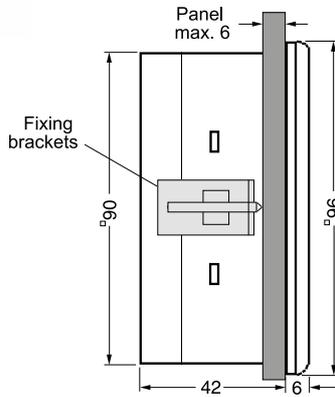

Fig.: Password protection

# UMG 96RM

## Multifunction power analyser

## Areas of application

- Measurement, monitoring and checking of electrical characteristics in energy distribution systems
- Recording of load profiles for energy management systems (e.g. ISO 50001)
- Acquisition of the energy consumption for cost centre analysis
- Measured value transducer for building management systems or PLC (Modbus)

## Main features

### Particular advantages

- Compact construction saves space and costs during installation
- Seamless and sustained recording thanks to large measured data memory or via the online data acquisition (e.g. GridVis<sup>®</sup>-Service)
- High data security and redundancy
- Comprehensive communications options and protocols
- Multifaceted, pre-defined reports for power quality and energy consumption analysis (via GridVis<sup>®</sup>-Service)
- Simple report generation at the press of a button or automatically in accordance with defined time plans
- Precision measurement results provide an effective infrastructure as well as high production availability
- Generic Modbus profile: Arbitrary Modbus-capable devices and systems from other manufacturers can be incorporated and visualised in the monitoring solutions
- Long-term availability of the measurement devices guarantees simple retrofitting with system expansions

### Energy data acquisition & load profile

- Detailed acquisition of the energy data and the load profile
- More transparency in energy supply through energy analyses
- Safer design of the power distribution systems

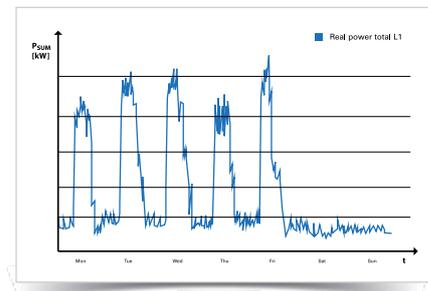

Fig.: Load profiles are the basis for energy management

### Cost centre analysis

- Determination of energy costs
- Breakdown and allocation of energy consumers

### Energy management systems (ISO 50001)

- Continuous increase in energy efficiency
- Cost reduction
- UMG 96RM series multifunctional power analysers are an important part of energy management systems

### Transparency of energy supply

- More transparency through a multi-stage, scalable measurement system
- Acquisition of individual events through continuous measurement with high resolution

	January	February	March	April	December	Total
HICA Water Boiler Heating	2480 12 kWh	1240 6 kWh	160 0,8 kWh	380 1,9 kWh	240 1,2 kWh	4500 € 21,9 kWh

Fig.: Cost centre analysis

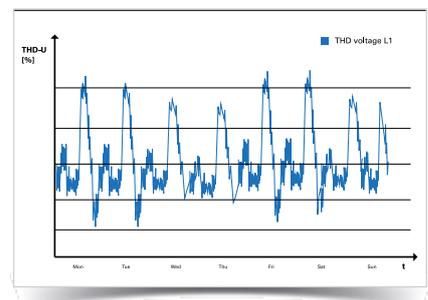

Fig.: Transparency of energy supply

### Power quality monitoring

- Notification of inadequate power quality
- Introduction of measures to address network problems
- Prevention of production downtimes
- Significantly longer service life for equipment
- Improved sustainability

### Measurement accuracy of 0.2 % (V), kWh class = 0.5S

- High sampling rate at 21.3 kHz
- Reliable measurement accuracy of 0.2 % (V)
- Effective energy class (kWh): 0.5S

### Energy meter with 8 tariffs, effective and reactive energy

- Energy measurement in 4 quadrants, each with 8 tariffs for effective and reactive energy
- Safe and precise acquisition of operational values for individual electrical loads

### Communications options: Ethernet, Profibus, Modbus, M-Bus, ...

- Numerous interfaces and protocols, guaranteeing an easy system connection (energy management system, PLC, SCADA, BMS)

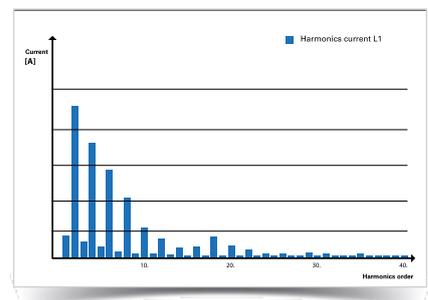

Fig.: Power quality monitoring (Harmonics analysis for the current up to 40th order harmonics)

#### Large measurement data memory

- Saving of measurement data possible over very long periods of time
- Recording freely user configurable

#### Harmonics analyser

- Harmonics analysis up to 40th harmonic
- Information about power quality, grid disturbances and possible "network polluters"

#### Pluggable screw terminals

- Convenient installation even where spaces are tight

#### Backlight

- Large, high-contrast LCD display with backlighting
- Very good readability and intuitive operation, even in poor lighting conditions

#### Basic device

- RS485 interface with Modbus protocol and 2 digital outputs enable quick and low-cost monitoring of power quality and energy consumption

#### Profibus and digital IOs

- The Profibus connection is used in systems where the UMG 96RM-P is to be incorporated into the automation environment (PLC controllers)

#### M-Bus

- The UMG 96RM-M can be simply and cost-effectively integrated into consumption data acquisition systems via the M-Bus connection.
- The M-Bus is primarily used for the acquisition of consumption data collection from various different consumption meters, such as water, gas, heat or electrical current.

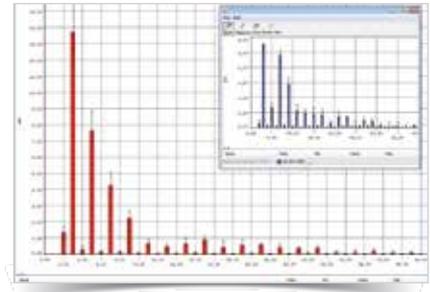

Fig.: GridVis® software: Harmonics analysis

Fig.: Pluggable screw terminals for easy connection

Fig.: LCD Display backlight

### Ethernet (TCP/IP) with the UMG 96RM-EL

- Simple integration into the Ethernet (LAN) network
- Fast and reliable data communication

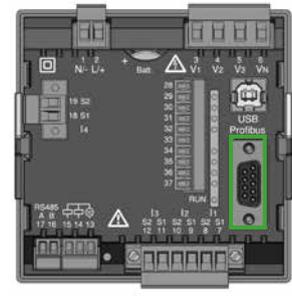

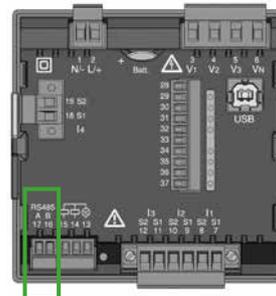

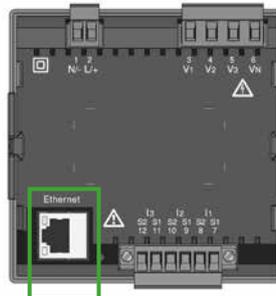

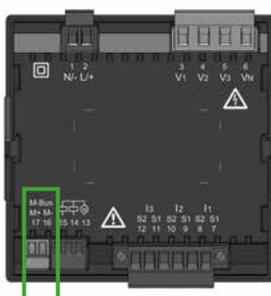

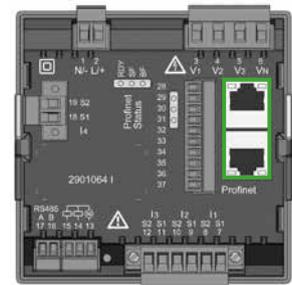

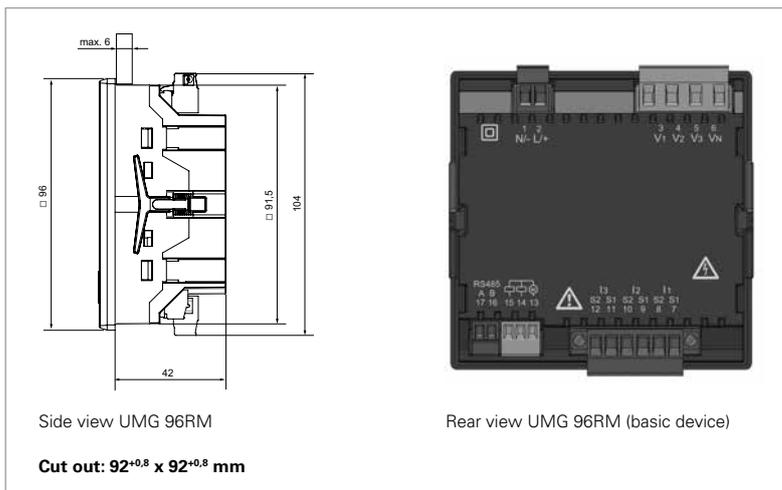

### 4th current transformer input

- Continuous monitoring of the N-conductor by means of the 4th current input
- Available with variants UMG 96RM-P and UMG 96RM-CBM

## Dimension diagrams

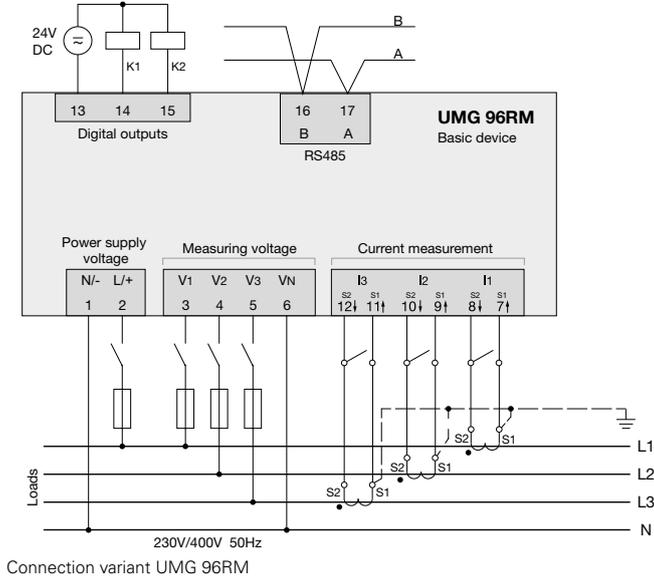

All dimensions in mm

The illustrations shown here are examples. Further dimensional drawings and connection diagrams are available on request or can be viewed on our homepage.

## Typical connection

The illustration shown here is an example. Further connection diagrams are available on request or can be viewed on our homepage.

## Chapter 02

### UMG 96RM

Measured voltage input	
Overvoltage category	300 V CAT III
Measured range, voltage L-N, AC (without potential transformer)	0 <sup>rs</sup> ... 300 Vrms
Measured range, voltage L-L, AC (without potential transformer)	0 <sup>rs</sup> ... 520 Vrms
Resolution	0.01 V
Impedance	3 MOhm / phase
Frequency measuring range	45 ... 65 Hz
Power consumption	approx. 0.1 VA
Sampling frequency per channel (50 / 60 Hz)	21.33 / 25.6 kHz
Measured current input	
Rated current	1 / 5 A
Resolution	0.1 mA
Measurement range	0.005 ... 6 Amps
Overvoltage category	300 V CAT II
Measurement surge voltage	2 kV
Power consumption	approx. 0.2 VA (Ri = 5 mOhm)
Overload for 1 sec.	120 A (sinusoidal)
Sampling frequency per channel (50 / 60 Hz)	21.33 / 25.6 kHz
Digital inputs and outputs	
Digital inputs <sup>*5</sup>	
Maximum counting frequency	20 Hz
Input signal present	18 ... 28 V DC (typical 4 mA)
Input signal not present	0 ... 5 V DC, current < 0.5 mA
Digital outputs <sup>*6</sup>	
Switching voltage	max. 60 V DC, 33 V AC
Switching current	max. 50 mA Eff AC / DC
Response time	10 / 12 periods + 10 ms
Pulse output (energy pulse)	max. 50 Hz
Maximum cable length	up to 30 m unscreened, from 30 m screened
Mechanical properties	
Weight	approx. 0.3 kg
Protection class per EN 60529	Front: IP40; Front with seal: IP54; Back: IP20
Assembly per IEC EN 60999-1 / DIN EN 50022	Front panel installation
Cable cross section	
Supply voltage	0.2 to 2.5 mm <sup>2</sup>
Current measurement	0.2 to 2.5 mm <sup>2</sup>
Voltage measurement	0.08 to 4.0 mm <sup>2</sup>
Environmental conditions	
Temperature range	Operation: K55 (-25 ... +70 °C)
Relative humidity	Operation: 0 to 90 % RH
Operating height	0 ... 2000 m above sea level
Degree of pollution	2
Installation position	user-defined
Electromagnetic compatibility	
Electromagnetic compatibility of electrical equipment	Directive 2004/108/EC
Electrical equipment for use within certain voltage limits	Directive 2006/95/EC
Equipment safety	
Safety requirements for electrical equipment for measurement, regulation, control and laboratory use – Part 1: General requirements	IEC/EN 61010-1
Part 2-030: Particular requirements for testing and measuring circuits	IEC/EN 61010-2-030
Noise immunity	
Class A: Industrial environment <sup>*7</sup>	IEC/EN 61326-1
Electrostatic discharge	IEC/EN 61000-4-2
Voltage dips	IEC/EN 61000-4-11
Emissions	
Class B: Residential environment	IEC/EN 61326-1
Radio disturbanc voltage strength 30 – 1000 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 0.15 – 30 MHz	IEC/CISPR11/EN 55011
Firmware	
Firmware update	Update via GridVis <sup>®</sup> software. Firmware download (free of charge) from the website: <a href="http://www.janitza.com/downloads">http://www.janitza.com/downloads</a>

• = included - = not included

<sup>\*5</sup> The information relates exclusively to the measurement devices UMG 96RM-CBM, UMG 96RM-P and UMG 96RM-PN.

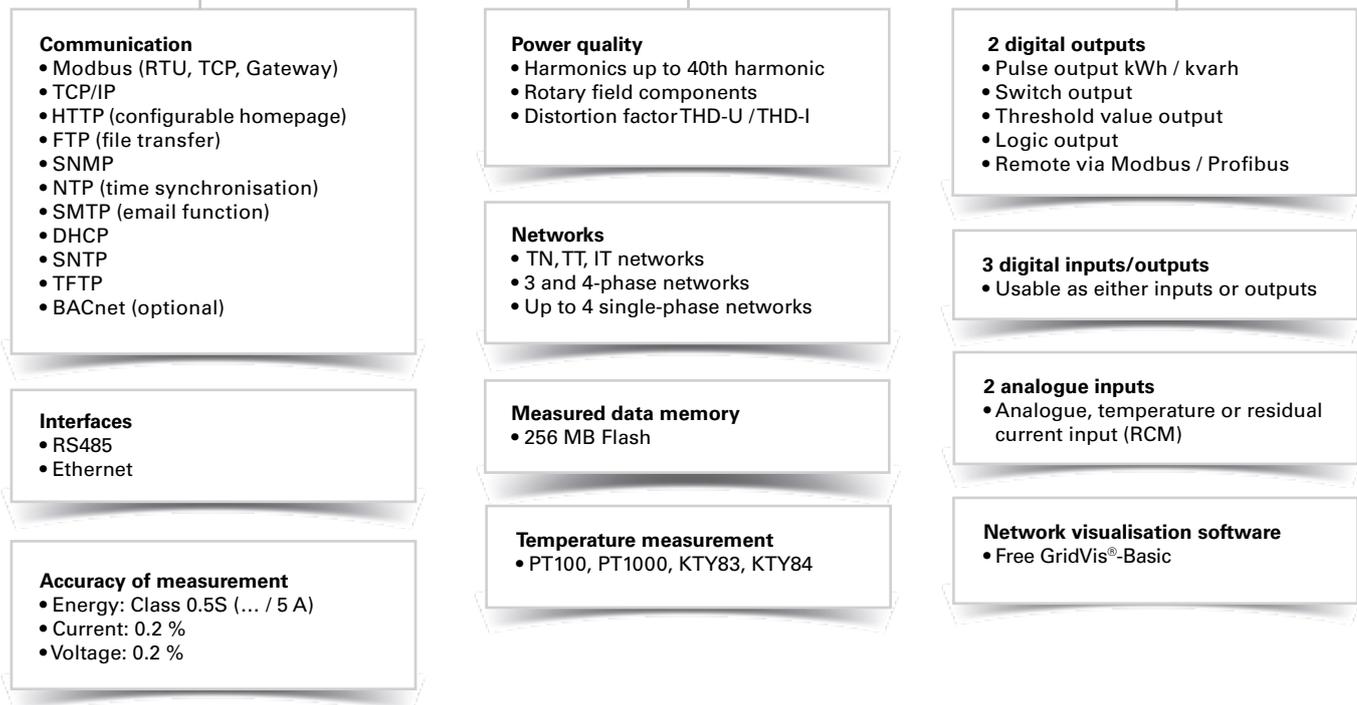

<sup>\*6</sup> The information relates exclusively to the measurement devices UMG 96RM, UMG 96RM-M, UMG 96RM-CBM, UMG 96RM-P and UMG 96RM-PN.

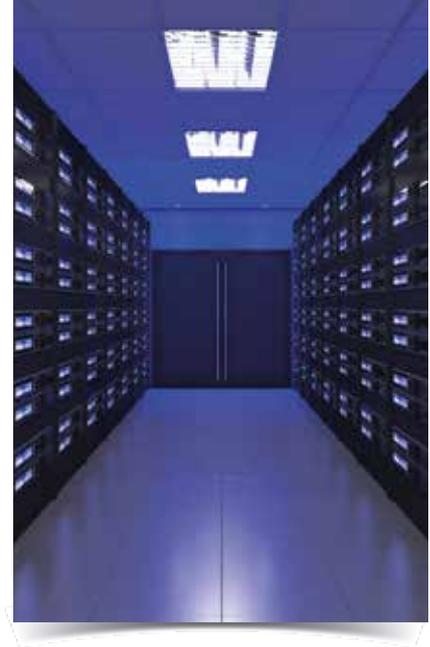

<sup>\*7</sup> UMG 96RM-PN exclusive Class A: Industrial environment

<sup>\*8</sup> The UMG 96RM can only detect measurements when a voltage L1-N greater than 20 V eff (4-wire measurement) at voltage input V1 or a voltage L1-L2 greater than 34 V eff (3-wire measurement) is applied.

# UMG 96 RM-E

Power analyser with Ethernet and RCM

## Areas of application

- Measurement, monitoring and checking of electrical characteristics in energy distribution systems
- Recording of load profiles in energy management systems (e.g. ISO 50001)
- Acquisition of the energy consumption for cost centre analysis
- Measured value transducer for building management systems or PLC (Modbus)
- Monitoring of power quality characteristics, e.g. harmonics up to 40th harmonic
- Residual current monitoring (RCM)

## Main features

### Universal meter

- Operating current monitoring for general electrical parameters
- High transparency through a multi-stage and scalable measurement system in the field of energy measurement
- Acquisition of events through continuous measurement with 200 ms high resolution

### RCM device

- Continuous monitoring of residual currents (Residual Current Monitor, RCM)
- Alarming in case a preset threshold fault current reached
- Near-realtime reactions for triggering countermeasures
- Permanent RCM measurement for systems in permanent operation without the opportunity to switch off

### Energy measurement device

- Continuous acquisition of the energy data and load profiles
- Essential both in relation to energy efficiency and for the safe design of power distribution systems

### Harmonics analyser / event recorder

- Analysis of individual harmonics for current and voltage
- Prevention of production downtimes
- Significantly longer service life for equipment
- Rapid identification and analysis of power quality fluctuations by means of user-friendly tools (GridVis®)

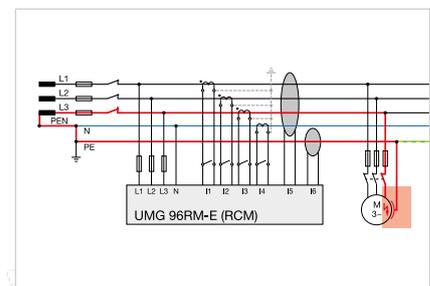

Fig.: UMG 96RM-E with residual current monitoring via measuring inputs I5 / I6

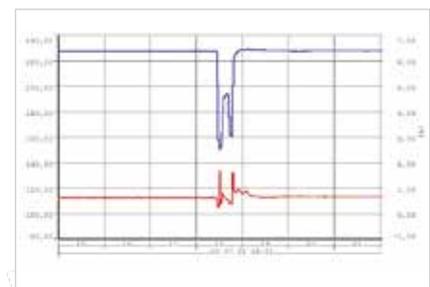

Fig.: Event logger: Voltage dip in the low voltage distribution system

7  
Tariffs

**Extensive selection of tariffs**

- 7 tariffs each for effective energy (consumption, delivery and without backstop)
- 7 tariffs each for reactive energy (inductive, capacitive and without backstop)
- 7 tariffs for apparent energy
- L1, L2 and L3, for each phase

**Highest possible degree of reliability**

- Continuous leakage current measurement
- Historical data: Long-term monitoring of the residual current allows changes to be identified in good time, e.g. insulation faults
- Time characteristics: Recognition of time relationships
- Prevention of neutral conductor carryover
- RCM threshold values can be optimized for each individual case: Fixed, dynamic and stepped RCM threshold value
- Monitoring of the CGP (central ground point) and the sub-distribution panels

**Analysis of fault current events**

- Event list with time stamp and values
- Presentation of fault currents with characteristic and duration
- Reproduction of phase currents during the fault current surge
- Presentation of the phase voltages during the fault current surge

**Analysis of the harmonic fault current components**

- Frequencies of the fault currents (fault type)
- Current peaks of the individual frequency components in A and %
- Harmonics analysis up to 40th harmonic
- Maximum values with real-time bar display

**Digital IOs**

- Extensive configuration of IOs for intelligent integration, alarm and control tasks

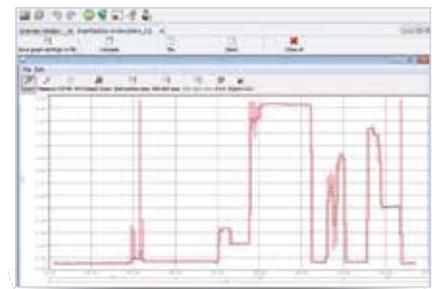

Fig.: Continuous leakage current measurement

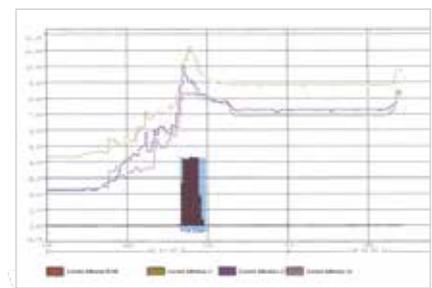

Fig.: Analysis of fault current events

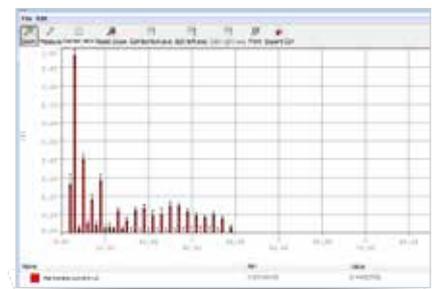

Fig.: Analysis of the harmonic fault current components

### Ethernet (TCP/IP)- / Homepage- / Ethernet-Modbus gateway functionality

- Simple integration into the network
- More rapid and reliable data transfer
- Modern homepage
- World-wide access to measured values by means of standard web browsers via the device's inbuilt homepage
- Access to measurement data via various channels
- Reliable saving of measurement data possible over a very long periods of time in the 256 MByte measurement data memory
- Connection of Modbus slave devices via Ethernet-Modbus gateway

Fig.: Ethernet-Modbus gateway functionality

### Measuring device homepage

- Webserver on the measuring device, i.e. device's own homepage
- Remote operation of the device display via the homepage
- Comprehensive measurement data incl. PQ
- Online data directly available via the homepage, historic data optional via the APP measured value monitor, 51.00.246

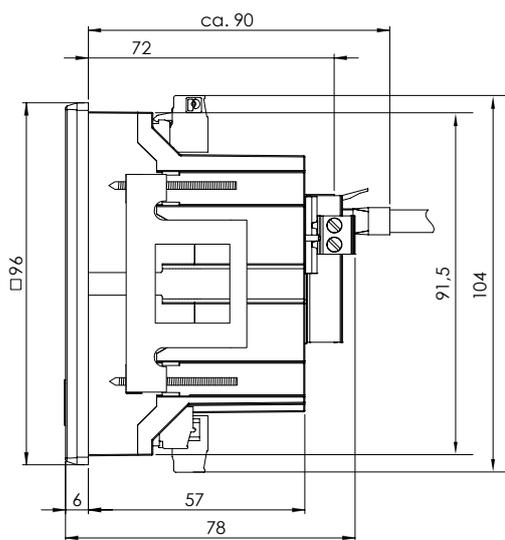

Fig.: Illustration of the online data via the device's inbuilt homepage

# UMG 96-PA

4-in-1 energy measurement device - four functions one solution

## Areas of application

- Measurement, monitoring and checking of electrical characteristics in energy distribution systems
- Recording of load profiles in energy management systems (e.g. ISO 50001)
- Acquisition of the energy consumption for cost centre analysis
- Measured value transducer for building management systems or PLC (Modbus)
- As MID variant, suitable for accounting applications
- Optional module-based extension for residual and leakage current measurement
- Near-realtime reactions for triggering countermeasures
- Permanent RCM measurement for systems in permanent operation without the opportunity to switch off

## Main features

### Power quality

- Harmonics analysis up to 25th harmonic, indirect
- Distortion factor THD-U / THD-I
- Minimum and maximum values
- Measurement of positive, negative and zero sequence component

### Features

- 3 Voltage measurement inputs (600 V CATIII)
- 3 Current measurement inputs
- Continuous sampling of the voltage and current measurement inputs
- Measurement of the reactive distortion power
- Sampling rate 8.33 kHz
- Transfer of the measured values via a serial interface

### Extension of functions by add-on modules

- 2 analogue inputs – can be selected as 0–20 mA analogue inputs or as RCM measuring inputs with detection of cable breaks and additional temperature measurement
- Module – selectable with Ethernet interface
- Continuous monitoring of residual currents (Residual Current Monitoring, RCM)

Fig.: UMG 96-PA energy measurement device

Fig.: UMG 96-PA incl. module with Ethernet connection

### Digital IOs

- Additional application options with comprehensive peripherals (three digital inputs and outputs and an analogue output)
- Extensive configuration of IOs for intelligent integration for monitoring of limit values and message upon exceedance

### User-friendly, colour graphical display with intuitive user guidance

- High resolution colour graphical display 320 x 240 pixels, 6 buttons
- User-friendly, self-explanatory and intuitive operation
- Illustration of measured values in numeric form, as a bar graph or line graph

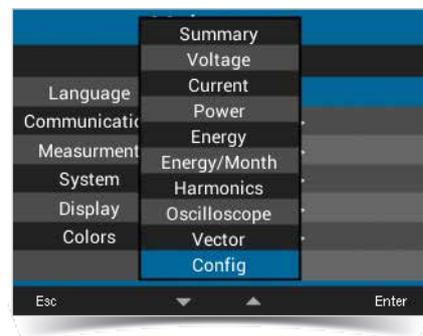

Fig.: UMG 96-PA colour graphics display

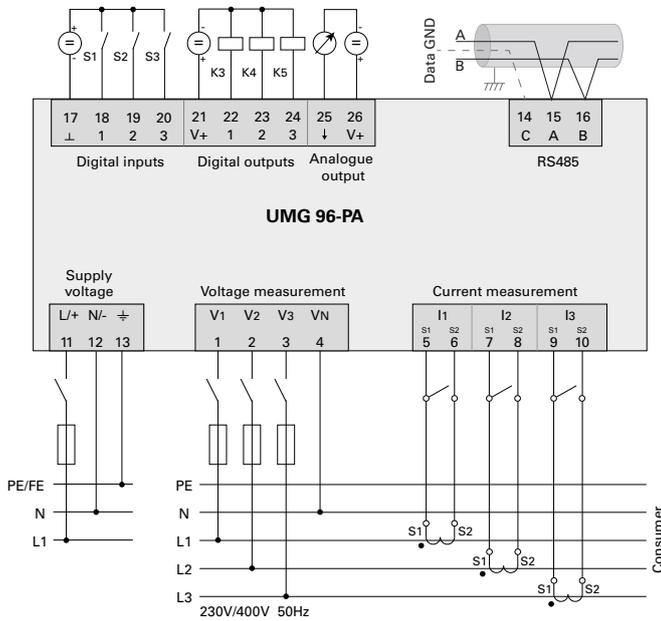

### MID-compliant measurement

- Certified and tamp-proof measurement
- Legally secure accounting & energy acquisition (EEG [German renewable energy sources] law, StromStG [German electricity tax law])
- Fulfilment of legal stipulations

## Typical connection variant

## Device overview and technical data, basic device

Basic device without MID <sup>1</sup>	UMG 96-PA

Comparator (2 Groups with 3 comparators each)	•
Type of measurement	Continuous real effective value measurement up to the 25th harmonic
Nominal voltage, three-phase, 4-conductor (L-N, L-L)	417 / 720 V AC (+ 10%)
Measurement in quadrants	4
Networks	TN, TT
<b>Measured voltage input</b>	
Overvoltage category	600 V CAT III
Maximum metering range, voltage L-N, AC (without transformer)	0 <sup>2</sup> - 600 Vrms
Maximum metering range, voltage L-L, AC (without transformer)	0 <sup>2</sup> - 1040 Vrms
Resolution	0.01 V
Frequency measuring range	45 to 65 Hz
Power consumption	4.5 VA
Measurement voltage surge	6 kV
Sampling rate	8.33 kHz / phase
<b>Measured current input</b>	
Rated current	1 / 5 A
Resolution	0.1 mA
Metering range	0.005 - 6 Amps
Overvoltage category	300 V CAT II
Measurement voltage surge	2 kV
Power consumption	Approx. 0.2 VA (Ri = 5 mOhm)
Overload for 1 sec.	60 A (sinusoidal)
Sampling rate	8.33 kHz / phase
<b>Inputs and outputs</b>	
Digital inputs	3
Digital outputs	3
Analog outputs	1
<b>Mechanical properties</b>	
Weight	250 g
Device dimensions in mm (H x W x D)	Approx. 96 x 96 x 86
Protection class per EN 60529	Front IP40 / back IP20
Assembly per IEC EN 60999-1 / DIN EN 50022	Front panel installation
Connecting phase (U), Single core, multi-core, fine-stranded Terminal pins, core end sheath	0.08 to 4.0 mm <sup>2</sup> 0.2 to 2.5 mm <sup>2</sup>
Connecting phase (I), Single core, multi-core, fine-stranded Terminal pins, core end sheath	0.2 to 2.5 mm <sup>2</sup> 0.2 to 2.5 mm <sup>2</sup>

\*2 The device can only determine measurement values if there is at the voltage measurement input V1 a voltage L1-N greater than 20 Veff (4-wire measurement) or a voltage L1-L2 greater than 34 Veff (3-wire measurement).

Environmental conditions	
Temperature range	Operation: K55 (-10 ... +55 °C)
Relative humidity	Operation: 0 to 75 %
Operating altitude	0 to 2,000 m above sea level
Pollution degree	2
Installation position	any
Electromagnetic compatibility	
Electromagnetic compatibility of equipment	Directive 2004/108/EC
Electrical equipment for use within certain voltage limits	Directive 2006/95/EC
Equipment safety	
Safety requirements for electrical equipment for measurement, control, and laboratory use – Part 1: General requirements	IEC/EN 61010-1
Part 2-030: Particular requirements for testing and measuring circuits	IEC/EN 61010-2-030
Immunity from interference	
Industrial area	IEC/EN 61326-1
Electrostatic discharge	IEC/EN 61000-4-2
Voltage dips	IEC/EN 61000-4-11
Emissions	
Class A: Residential area	IEC/EN 61326-1
RFI Field Strength 30 – 1,000 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 0.15 – 30 MHz	IEC/CISPR11/EN 55011
Safety	
Europe	CE labelling
USA and Canada	UL certified
Firmware	
Firmware update	Update via GridVis® software. Firmware download (free of charge) from the website: <a href="http://www.janitza.de">http://www.janitza.de</a>

\*1 Optional additional functions with the packages GridVis®-Professional, GridVis®-Service and GridVis®-Ultimate.

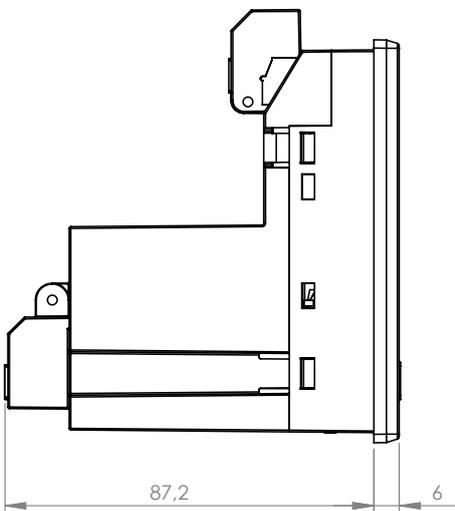

Comment: For detailed technical information please refer to the operation manual and the Modbus address list.

## Device overview and technical data module

Modules for the UMG 96-PA	
Module <b>without</b> Ethernet connection	Available soon
Module <b>with</b> Ethernet connection	Available soon
<b>Residual current input</b>	
Analogue inputs	2 for residual current or analogue measurement
Rated current	30 mA rms
Triggering current	50 $\mu$ A
Resolution	1 $\mu$ A
<b>Temperature measurement</b>	
Update time	1 second
Connectable sensors	PT100, PT1000, KTY83, KTY84
<b>Current measurement N measuring (I4)</b>	
Rated current	1 / 5 A
Overvoltage category	300 V CAT II
Power consumption	Approx. 0.2 VA (Ri = 5 mOhm)
Sampling rate	8.33 kHz
<b>Interface</b>	
Ethernet connection	RJ45, 10/100 Mbit

## Typical connection variant

# UMG 508

## Multifunction power analyser

Power quality

Ethernet connection

Graphic programming

Colour graphical display

Ethernet-Modbus gateway

Alarm management

### Communication

- Profibus (DP/V0)
- Modbus (RTU, TCP, Gateway)
- TCP/IP
- BACnet (optional)
- HTTP (Homepage)
- FTP (File transfer)
- SNMP
- TFTP
- NTP (time synchronisation)
- SMTP (email function)
- DHCP

### Interfaces

- Ethernet
- Profibus / RS485 (DSUB-9)

### Accuracy of measurement

- Energy: Class 0.2S (... / 5 A)
- Current: 0.2 %
- Voltage: 0.1 %

### Power quality

- Harmonics up to 40th harmonic
- Short-term interruptions (> 20 ms)
- Transient recorder (> 50  $\mu$ s)
- Starting currents (> 20 ms)
- Unbalance
- Full wave effective value recording (up to 4.5 min.)

### Networks

- IT, TN, TT networks
- 3 and 4-phase networks
- Up to 4 single-phase networks

### Measured data memory

- 256 MByte Flash
- 32 MB SDRAM

### PLC functionality

- Graphical programming
- Jasic<sup>®</sup> programming language
- Programming of threshold values etc.

### 8 digital inputs

- Pulse input
- Logic input
- State monitoring
- HT / LT switching

### 5 digital outputs

- Pulse output kWh / kvarh
- Switch output
- Threshold value output
- Logic output

### Peak demand management (optional)

- Up to 64 switch-off stages

### Network visualisation software

- Free GridVis<sup>®</sup>-Basic

## Areas of application

- Continuous monitoring of the power quality
- Energy management systems (ISO 50001)
- Master device with Ethernet gateway for subordinate measurement points
- Visualisation of the energy supply in the LVDB
- Analysis of electrical disturbances in the event of power quality problems
- Cost centre analysis
- Remote monitoring in the property operation
- Use in test fields (e.g. in universities)

## Main features

### High quality measurement with high sampling rate (20 kHz per channel)

#### Power quality

- Harmonics analysis up to 40th harmonic
- Acquisition of short-term interruptions
- Acquisition of transients
- Display of waveforms (current and voltage)
- Unbalance
- Vector diagram

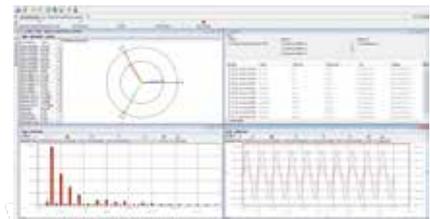

Fig.: GridVis® – Graph set

#### User-friendly, colour graphical display with intuitive user guidance

- High resolution graphics display
- User-friendly, self-explanatory and intuitive operation
- Clear and informative representation of online graphs and further power quality events

Fig.: Large colour display, e.g. 12 monthly demand values

#### Modern communications architecture via Ethernet

- Ethernet interface and web server
- Faster, better cost-optimised and more reliable communication system
- High flexibility due to the use of open standards
- Integration in PLC systems and BMS through additional interfaces
- BACnet optionally available

### Modbus Gateway function

- Economical connection of devices without Ethernet interface
- Integration of devices with Modbus-RTU interface possible
- Data can be scaled and described
- Minimised number of IP addresses required

### Graphical programming

- Comprehensive programming options (PLC functionality)
- Jasic® source code programming
- Sustainable functional expansions far beyond pure measurement
- Complete APPs from the Janitza library

### Powerful alarm management

- Can be programmed via the graphic programming or Jasic® source code
- All measured values can be used
- Can be arbitrarily, mathematically processed
- Individual forwarding via email sending, switching of digital outputs, writing to Modbus addresses etc.
- Watchdog APP
- Further alarm management functions via GridVis®-Service alarm management

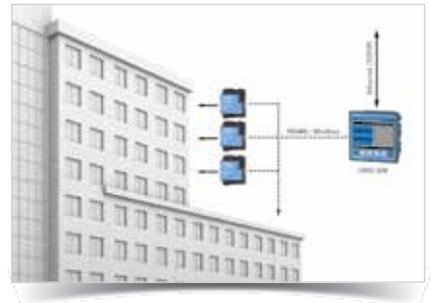

Fig.: GridVis® topology view

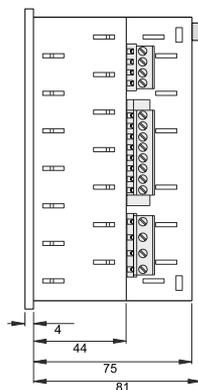

Fig.: The alarm management system reports events arising in good time.

Measurement in quadrants	4
Networks	TN, TT, IT
Measurement in single-phase/multi-phase networks	1 ph, 2 ph, 3 ph, 4 ph and up to 4 times 1 ph
<b>Measured voltage input</b>	
Overvoltage category	600 V CAT III
Measured range, voltage L-N, AC (without potential transformer)	0*3 ... 600 Vrms

Comment:  
For detailed technical information please refer to the operation manual and the Modbus address list.

• = included - = not included

\*1 Optional additional functions with the packages GridVis®-Professional, GridVis®-Service and GridVis®-Ultimate.

\*2 With UL variants: 347/600 V

\*3 The UMG 508 can only detect measurement values if a voltage L-N larger than 10 Veff or a voltage L-L larger than 18 Veff is applied to at least one voltage measurement input.

## Chapter 02

### UMG 508

Measured range, voltage L-L, AC (without potential transformer)	0 <sup>3</sup> ... 1000 Vrms
Resolution	0.01 V
Impedance	4 MOhm / phase
Frequency measuring range	40 ... 70 Hz
Power consumption	approx. 0.1 VA
Sampling frequency	20 kHz / phase
<b>Measured current input</b>	
Rated current	1 / 5 A
Resolution	0.1 mA
Measurement range	0.005 ... 8.5 Amps
Overvoltage category	300 V CAT III
Measurement surge voltage	4 kV
Power consumption	approx. 0.2 VA (Ri = 5 MOhm)
Overload for 1 sec.	120 A (sinusoidal)
Sampling frequency	20 kHz
<b>Digital inputs and outputs</b>	
Number of digital inputs	8
Maximum counting frequency	20 Hz
Reaction time (Jasic® program)	200 ms
Input signal present	18 ... 28 V DC (typical 4 mA)
Input signal not present	0 ... 5 V DC, current < 0.5 mA
Number of digital outputs	5
Switching voltage	max. 60 V DC, 30 V AC
Switching current	max. 50 mA Eff AC / DC
Output of voltage dips	20 ms
Pulse output (energy pulse)	max. 20 Hz
Maximum cable length	up to 30 m unshielded, from 30 m screened
<b>Mechanical properties</b>	
Weight	1080 g
Device dimensions in mm (H x W x D)	144 x 144 x approx. 81
Battery	Type CR1/2AA, 3 V, Li-Mn
Protection class per EN 60529	Front: IP40; Rear: IP20
Assembly per IEC EN 60999-1 / DIN EN 50022	Front panel installation
Connecting phase (U / I), Single core, multi-core, fine-stranded Terminal pins, core end sheath	0.2 to 2.5 mm <sup>2</sup> 0.2 to 2.5 mm <sup>2</sup>
<b>Environmental conditions</b>	
Temperature range	Operation: K55 (-10 ... +55 °C)
Relative humidity	Operation: 0 ... 75 % RH
Operating height	0 ... 2,000 m above sea level
Degree of pollution	2
Installation position	user-defined
<b>Electromagnetic compatibility</b>	
Electromagnetic compatibility of electrical equipment	Directive 2004/108/EC
Electrical appliances for application within particular voltage limits	Directive 2006/95/EC
<b>Equipment safety</b>	
Safety requirements for electrical equipment for measurement, regulation, control and laboratory use – Part 1: General requirements	IEC/EN 61010-1
Part 2-030: Particular requirements for testing and measuring circuits	IEC/EN 61010-2-030
<b>Noise immunity</b>	
Class A: Industrial environment	IEC/EN 61326-1, EMV-ILA Version 01-03
Electrostatic discharge	IEC/EN 61000-4-2
Voltage dips	IEC/EN 61000-4-11, EMV-ILA V01-03
<b>Emissions</b>	
Class B: Residential environment	IEC/EN 61326-1, EMV-ILA Version 01-03
Radio disturbanc voltage strength 30 – 1000 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 0.15 – 30 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 9 – 150 kHz	EMV-ILA V01-03
<b>Safety</b>	
Europe	CE labelling
USA and Canada	UL variants available
<b>Firmware</b>	
Firmware update	Update via GridVis® software. Firmware download (free of charge) from the website: <a href="http://www.janitza.com">http://www.janitza.com</a>

Comment:  
For detailed technical information please refer to the operation manual and the Modbus address list.

• = included - = not included

\*3 The UMG 508 can only detect measurement values if a voltage L-N larger than 10 Veff or a voltage L-L larger than 18 Veff is applied to at least one voltage measurement input.

# UMG 509-PRO

Multifunction power analyser with RCM

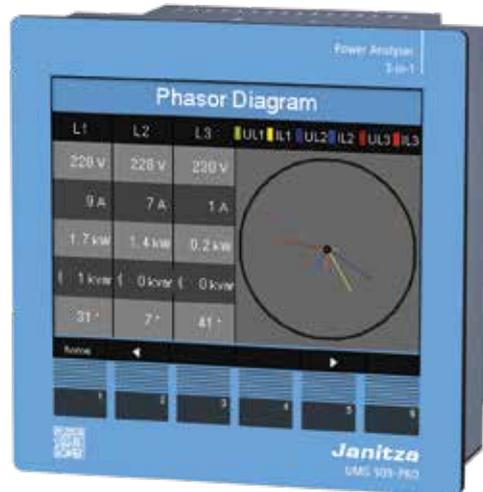

Power quality

Ethernet connection

Graphic programming

Residual current monitoring

Ethernet-Modbus gateway

Alarm management

## Communication

- Profibus (DP/V0)
- Modbus (RTU, TCP, Gateway)
- TCP/IP
- BACnet (optional)
- HTTP (Homepage)
- FTP (File transfer)
- SNMP
- TFTP
- NTP (time synchronisation)
- SMTP (email function)
- DHCP

## Interfaces

- Ethernet
- Profibus (DSUB-9)
- RS485 Modbus (terminal strip)

## Accuracy of measurement

- Energy: Class 0.2S (... / 5 A)
- Current: 0.2 %
- Voltage: 0.1 %

## Power quality

- Harmonics up to 63th harmonic
- Short-term interruptions (> 20 ms)
- Transient recorder (> 50 µs)
- Starting currents (> 20 ms)
- Unbalance

## Networks

- IT, TN, TT networks
- 3 and 4-phase networks
- Up to 4 single-phase networks

## Measured data memory

- 256 MByte Flash
- 32 MB SDRAM

## PLC functionality

- Graphical programming
- Jasic® programming language
- Programming of threshold values etc.

## 2 digital inputs

- Pulse input
- Logic input
- State monitoring
- HT / LT switching

## 2 digital outputs

- Pulse output kWh / kvarh
- Switch output
- Threshold value output
- Logic output

## Network visualisation software

- Free GridVis®-Basic

## Thermistor input

- PT100, PT1000, KTY83, KTY84

## RCM – Residual Current Monitoring

- 2 residual current inputs

## Areas of application

- Continuous monitoring of the power quality
- Energy management systems (ISO 50001)
- Master device with Ethernet gateway for subordinate measurement points
- Visualisation of the energy supply in the LVDB
- Analysis of electrical disturbances in the event of power quality problems
- Cost centre analysis
- Remote monitoring in the property operation
- Use in test fields (e.g. in universities)

## Main features

### High quality measurement with high sampling rate (20 kHz per channel)

#### Power quality

- Harmonics analysis up to 63rd harmonic
- Acquisition of short-term interruptions
- Acquisition of transients
- Display of waveforms (current and voltage)
- Unbalance
- Vector diagram

#### RCM (Residual Current Monitoring)

- Continuous monitoring of residual currents (Residual Current Monitor, RCM)
- Alarming in case a preset threshold fault current reached
- Near-realtime reactions for triggering countermeasures
- Permanent RCM measurement for systems in permanent operation without the opportunity to switch off
- Ideal for the central earthing point in TN-S systems

#### Modern communications architecture via Ethernet

- Ethernet interface and web server
- Faster, better cost-optimised and more reliable communication system
- High flexibility due to the use of open standards
- Integration in PLC systems and BMS through additional interfaces
- BACnet optionally available
- Up to 4 ports simultaneous
- Versatile IP protocols

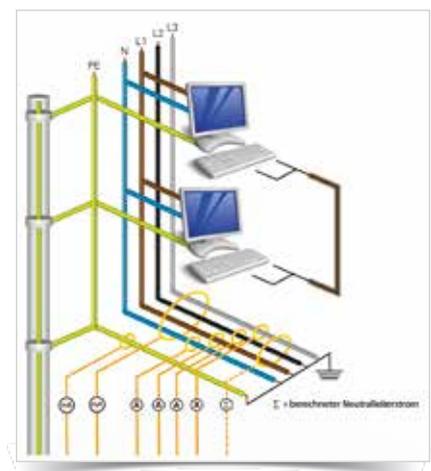

Fig.: Example RCM measurement

### Modbus Gateway function

- Economical connection of devices without Ethernet interface
- Integration of devices with Modbus-RTU interface possible
- Data can be scaled and described
- Minimised number of IP addresses required

### Graphical programming

- Comprehensive programming options (PLC functionality)
- Jasic® source code programming
- Sustainable functional expansions far beyond pure measurement
- Complete APPs from the Janitza library

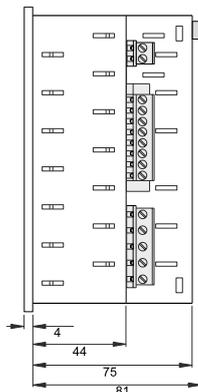

### Powerful alarm management

- Can be programmed via the graphic programming or Jasic® source code
- All measured values can be used
- Can be arbitrarily, mathematically processed
- Individual forwarding via email sending, switching of digital outputs, writing to Modbus addresses etc.
- Watchdog APPs
- Further alarm management functions via GridVis®-Service alarm management

Frequency measuring range	40 ... 70 Hz
Power consumption	approx. 0.1 VA
Sampling frequency	20 kHz / phase
<b>Measured current input</b>	
Rated current	1 / 5 A
Resolution	0.1 mA
Measurement range	0.005 ... 7 Amps
Overvoltage category	300 V CAT III
Measurement surge voltage	4 kV
Power consumption	approx. 0.2 VA (Ri = 5 MOhm)
Overload for 1 sec.	120 A (sinusoidal)
Sampling frequency	20 kHz
<b>Residual current / Temperature inputs</b>	
Residual current inputs	2
Measurement range, residual current inputs	0,05 ... 30 mA
Temperature input	1
<b>Digital inputs and outputs</b>	
Number of digital inputs	2
Maximum counting frequency	20 Hz
Reaction time (Jasic® program)	200 ms
Input signal present	18 ... 28 V DC (typical 4 mA)
Input signal not present	0 ... 5 V DC, current < 0.5 mA
Number of digital outputs	2
Switching voltage	max. 60 V DC, 30 V AC
Switching current	max. 50 mA Eff AC / DC
Output of voltage dips	20 ms
Pulse output (energy pulse)	max. 20 Hz
Maximum cable length	up to 30 m unscreened, from 30 m screened
<b>Mechanical properties</b>	
Weight	1080 g
Device dimensions in mm (H x W x D)	144 x 144 x approx. 81
Battery	Type CR2450, 3 V, Li-Mn
Protection class per EN 60529	Front: IP40; Rear: IP20
Assembly per IEC EN 60999-1 / DIN EN 50022	Front panel installation
Connecting phase (U / I), Single core, multi-core, fine-stranded	0.2 to 2.5 mm <sup>2</sup>
Terminal pins, core end sheath	0.2 to 2.5 mm <sup>2</sup>
<b>Environmental conditions</b>	
Temperature range	Operation: K55 (-10 ... +55 °C)
Relative humidity	Operation: 0 ... 75 % RH
Operating height	0 ... 2,000 m above sea level
Degree of pollution	2
Installation position	user-defined
<b>Electromagnetic compatibility</b>	
Electromagnetic compatibility of electrical equipment	Directive 2004/108/EC
Electrical appliances for application within particular voltage limits	Directive 2006/95/EC
<b>Equipment safety</b>	
Safety requirements for electrical equipment for measurement, regulation, control and laboratory use – Part 1: General requirements	IEC/EN 61010-1
Part 2-030: Particular requirements for testing and measuring circuits	IEC/EN 61010-2-030
<b>Noise immunity</b>	
Class A: Industrial environment	IEC/EN 61326-1
Electrostatic discharge	IEC/EN 61000-4-2
Voltage dips	IEC/EN 61000-4-11
<b>Emissions</b>	
Class B: Residential environment	IEC/EN 61326-1
Radio disturbanc voltage strength 30 – 1000 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 0.15 – 30 MHz	IEC/CISPR11/EN 55011
<b>Safety</b>	
Europe	CE labelling
USA and Canada	UL variants available
<b>Firmware</b>	
Firmware update	Update via GridVis® software. Firmware download (free of charge) from the website: <a href="http://www.janitza.com">http://www.janitza.com</a>

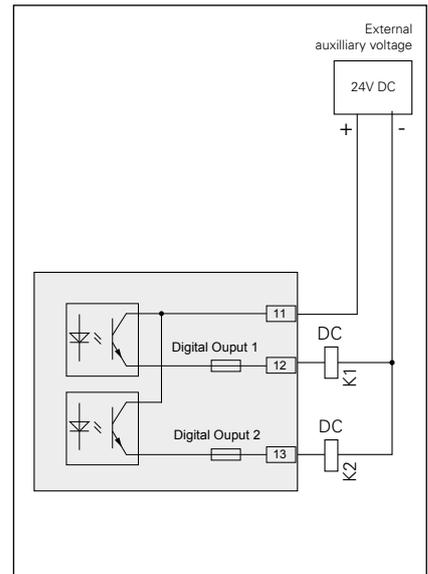

Fig. Example for two electronic relays connected to the digital outputs

Comment:

For detailed technical information please refer to the operation manual and the Modbus address list.

• = included - = not included

\*<sup>3</sup>The UMG 509-PRO can only determine measured values, if an L-N voltage of greater than 10 Veff or an L-L voltage of greater than 18 Veff is applied to at least one voltage measurement input.

# UMG 511

## Class A power quality analyser

**Communication**

- Profibus (DP/V0)
- Modbus (RTU, TCP, Gateway)
- TCP/IP
- BACnet (optional)
- HTTP (configurable homepage)
- FTP (file transfer)
- TFTP
- NTP (time synchronisation)
- SMTP (email function)
- DHCP
- SNMP

**Interfaces**

- Ethernet
- Profibus / RS485 (DSUB-9)

**Accuracy of measurement**

- Energy: Class 0.2S (... / 5 A)
- Current: 0.2 %
- Voltage: 0.1 %

**Power quality acc. Class A**

- Harmonics up to the 63rd harmonic
- Flicker measurement
- Short-term interruptions (> 10 ms)
- Transient recorder (> 50 µs)
- Starting currents (> 10 ms)
- Unbalance
- Half wave RMS recordings (up to 4.5 min.)

**Networks**

- IT, TN, TT networks
- 3 and 4-phase networks

**Measured data memory**

- 256 MByte Flash

**Programming language**

- Graphical programming
- Jasic®
- PLC functionality

**8 digital inputs**

- Pulse input
- Logic input
- State monitoring
- HT / LT switching

**5 digital outputs**

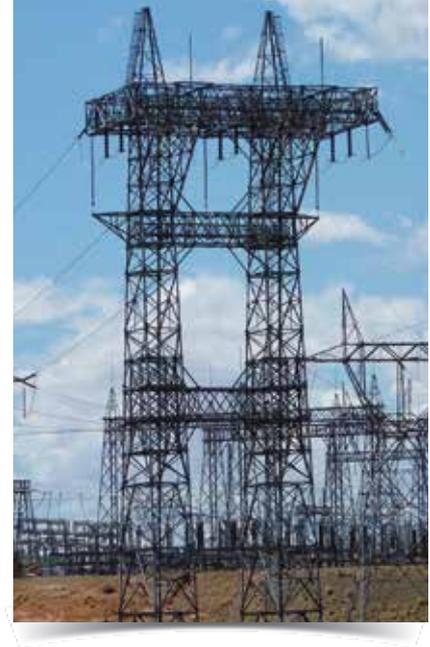

- Pulse output kWh / kvarh
- Switch output
- Threshold value output
- Logic output (expandable via external I/O modules)

**Peak demand management (optional)**

- Up to 64 switch-off stages

**Network visualisation software**

- Free GridVis®-Basic
- PQ Report Generator

## Areas of application

- Continuous monitoring of the power quality
- Harmonics analysis with power quality problems
- Checking the internal supply network according to EN 61000-4-7, EN 6100-4-15, EN 61000-4-30
- Fault analysis in case of problems with the energy supply
- Documentation of the power quality for customers and regulatory authorities
- Ethernet Gateway for subordinate measurement points
- Report generator for power quality standards: EN 50160, IEE519, ITIC ...
- Report generator for energy consumptions
- Energy Dashboard
- Remote monitoring of critical processes

## Main features

### Power quality

- Harmonics analysis up to the 63rd harmonic, even / odd (U, I, P, Q)
- Interharmonics (U, I)
- Distortion factor THD-U / THD-I / TDD
- Measurement of positive, negative and zero sequence component
- Unbalance
- Direction of rotation field
- Voltage crest factor
- Flicker measurement in accordance with DIN EN 61000-4-15
- Logging and storage of transients (> 50  $\mu$ s)
- Short-term interruptions (> 10 ms)
- Monitoring start-up processes

### High quality measurement

- Constant true RMS measurement
- Measurement process in accordance with IEC 61000-4-30
- Certified accuracy of measurement according to class A
- Continuous sampling of the voltage and current measurement inputs at 20,000 Hz
- 400 measurement points per period
- Recording of over 2,000 measured values per measurement cycle
- Accuracy of active energy measurement: Class 0.2S
- Fast measurement even enables the logging of rapid transients from 50  $\mu$ s
- Logging of currents and voltages (15 – 440 Hz)

Fig.: UMG 511 Class A-certified

### User-friendly, colour graphical display with intuitive user guidance

- High resolution colour graphical display 320 x 240, 256 colours, 6 buttons
- User-friendly, self-explanatory and intuitive operation
- Backlight for optimum reading, even in darker environments
- Illustration of measured values in numeric form, as a bar graph or line graph
- Clear and informative representation of online graphs and power quality events
- Multilingual: German, English, Russian, Spanish, Chinese, French, Japanese, Turkish ...

### Various characteristics

- 4 voltage and 4 current measurement inputs, i.e. logging of N and / or PE possible
- 8 digital inputs, e.g. as data logger for S0 meter
- 5 digital outputs for alarm message or e.g. for connection to a BMS or PLC
- Free name assignment for the digital IOs, e.g. if used as data logger

### Comprehensive communication and connection possibilities

- Modbus
- Profibus
- Ethernet (TCP/IP)
- Digital IOs
- BACnet (optional)
- Configurable Firewall

### Modern communications architecture via Ethernet

- Simple integration in an Ethernet network
- Reliable and cost-optimised establishment of communication
- Ideal for Master-Slave structures
- High flexibility due to the use of open standards
- Integration in PLC systems and BMS through additional interfaces
- Various IP protocols: SNMP, ICMP (Ping), NTP, FTP ...

Transients (1..8)		
Phase	Reason	Date/Time
L1	delta	2011 Mar 16 15:33:07,122
L4	delta	2011 Mar 16 15:32:29,826
L3	delta	2011 Mar 16 15:32:29,819
L2	delta	2011 Mar 16 15:32:29,813
L2	delta	2011 Mar 16 15:32:29,806
L1	delta	2011 Mar 16 15:32:29,799
L4	delta	2011 Mar 16 15:32:29,793
L3	delta	2011 Mar 16 15:32:29,786

Fig.: Transients list

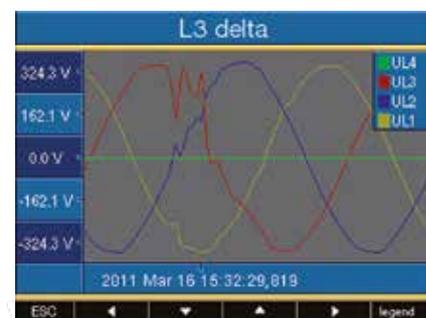

Fig.: Graphical representation of a transient

### Measuring device homepage

- Web server on the measuring device, i.e. device's inbuilt homepage
- Function expansion possible through APPs
- Remote operation of the device display via the homepage
- Comprehensive measurement data incl. PQ (transients, events...)
- Online data directly available via the homepage, historic data optional via the APP measured value monitor, 51.00.245

Fig.: Illustration of the historic data via the homepage

### BACnet protocol for building communication

- Optimal interoperability between devices from various manufacturers
- Predefined BIBBs (BACnet Interoperability Building Block)
- BACnet is optionally available with UMG 511
- UMG 511 supports the device type B-SA with the BIBBs DS-RP-B and DS-WP-B
- Furthermore, the BIBBs DS-COV-B and DM-UTC-B are also supported

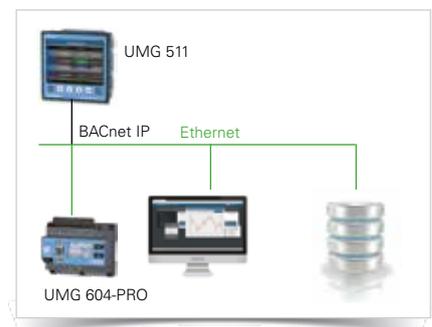

Fig.: BACnet topology

### Modbus Gateway function

- Economical connection of subordinate measuring devices without Ethernet interface
- Integration of devices with Modbus-RTU interface possible (harmonisation of data format and function code necessary)
- Data can be scaled and described
- Minimised number of IP addresses required
- Tried and tested integrated solution without additional hardware

### Programming / PLC functionality

- Further processing of the measurement data in the measuring device (local intelligence)
- Monitoring and alarm functions simple to program
- Sustainable functional expansions far beyond pure measurement
- Comprehensive programming options with
  - Jasic® source code programming
  - Graphical programming
- Complete APPs from the Janitza library

### Large measurement data memory

- 256 MB data memory
- Memory range up to 2 years (configuration-dependent)
- Individually configurable recordings

- Recording averaging times can be freely selected
- PQ recordings template preconfigured for conventional standards (e.g. EN 50160)
- User-defined memory segmenting possible

### Powerful alarm management

- Information available immediately by email
- Inform maintenance personnel via the powerful device homepage
- Via digital outputs, Modbus addresses, GridVis® software
- Programming via Jasic® or graphical programming
- Further alarm management functions via GridVis®-Service alarm management

### Peak load representation and peak load management

- Illustration of the 3 highest monthly power peaks on the LCD display (P, Q, S)
- Rolling bar chart representation of the peak power values over 3 years on the LCD display (P, Q, S)
- Plain text representation on the LCD display (P)

### GridVis®-Basic power quality analysis software

- Multilingual
- Manual read-out of the measuring devices
- Manual report generation (power quality and energy consumption reports)
- Comprehensive PQ analysis with individual graphs
  - Online graphs
  - Historic graphs
  - Graph sets
- Integrated databases (Janitza DB, Derby DB)
- Graphical programming
- Topology views
- High memory range

### Certified quality through independent institutes

- ISO 9001
- Energy management certified according to ISO 50001
- Class A certificate (IEC 61000-4-30)
- UL certificate
- EMC-tested product

General information	
Use in low, medium and high voltage networks	•
Accuracy voltage measurement	0.1 %
Accuracy current measurement	0.2 %
Accuracy active energy (kWh, .../5 A)	Class 0.2S
Number of measurement points per period	400
Seamless measurement	•
RMS - momentary value	
Current, voltage, frequency	•
Active, reactive and apparent power / total and per phase	•
Power factor / total and per phase	•
Energy measurement	
Active, reactive and apparent energy [L1, L2, L4, L3, $\Sigma$ L1-L3, $\Sigma$ L1-4]	•
Number of tariffs	8
Recording of the mean values	
Voltage, current / actual and maximum	•
Active, reactive and apparent power / actual and maximum	•
Frequency / actual and maximum	•
Demand calculation mode (bi-metallic function) / thermal	•
Other measurements	
Operating hours measurement	•
Clock	•
Weekly timer	Jasic®
Power quality measurements	
Harmonics per order / current and voltage	1st - 63rd
Harmonics per order / active and reactive power	1st - 63rd
Distortion factor THD-U in %	•
Distortion factor THD-I in %	•
Voltage unbalance	•
Current and voltage, positive, zero and negative sequence component	•
Flicker	•
Transients	> 50 $\mu$ s
Error / event recorder function	•
Short-term interruptions	10 ms
Oscillogram function (wave form U and I)	•
Ripple voltage signal	•
Under and overvoltage recording	•
Measured data recording	
Memory (Flash)	256 MB
Average, minimum, maximum values	•
Measured data channels	8
Alarm messages	•
Time stamp	•
Time basis average value	freely user-defined
RMS averaging, arithmetic	•

Technical data	
Type of measurement	Constant true RMS up to the 63rd harmonic
Nominal voltage, three-phase, 4-conductor (L-N, L-L)	417 / 720 V AC <sup>2</sup>
Nominal voltage, three-phase, 3-conductor (L-L)	600 V AC
Measurement in quadrants	4
Networks	TN, TT, IT
Measurement in single-phase/multi-phase networks	1 ph, 2 ph, 3 ph, 4 ph and up to 4 times 1 ph
Measured voltage input	
Overvoltage category	600 V CAT III
Measured range, voltage L-N, AC (without potential transformer)	0 <sup>3</sup> ... 600 Vrms
Measured range, voltage L-L, AC (without potential transformer)	0 <sup>3</sup> ... 1000 Vrms
Resolution	0.01 V
Impedance	4 MOhm / phase
Frequency measuring range	15 ... 440 Hz
Power consumption	approx. 0.1 VA
Sampling frequency	20 kHz / phase
Measured current input	
Rated current	1 / 5 A
Resolution	0.01 mA
Measurement range	0.005 ... 8.5 Amps
Overvoltage category	300 V CAT III
Measurement surge voltage	4 kV
Power consumption	approx. 0.2 VA (Ri = 5 MOhm)
Overload for 1 sec.	120 A (sinusoidal)
Sampling frequency	20 kHz

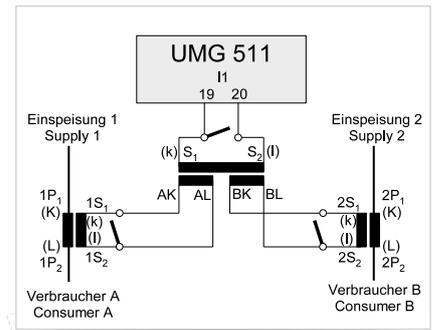

Fig.: Example, current measurement via a summation current transformer

Comment:  
For detailed technical information please refer to the operation manual and the Modbus address list.

• = included - = not included

\*1 Optional additional functions with the packages Grid-Vis®-Professional, GridVis®-Service and GridVis®-Ultimate.

\*2 With UL variants: 347/600 V

\*3 The UMG 511 can only ascertain measurement values when a measurement voltage higher than 10 Veff L-N or 18 Veff L-L is applied to at least one voltage measurement input

Digital inputs and outputs	
Number of digital inputs	8
Maximum counting frequency	20 Hz
Reaction time (Jasic® program)	200 ms
Input signal present	18 ... 28 V DC (typically 4 mA)
Input signal not present	0 ... 5 V DC, current < 0.5 mA
Number of digital outputs	5
Switching voltage	max. 60 V DC, 30 V AC
Switching current	max. 50 mA Eff AC / DC
Output of voltage dips	10 ms
Pulse output (energy pulse)	max. 20 Hz
Maximum cable length	up to 30 m unscreened, from 30 m screened
Mechanical properties	
Weight	1080 g
Device dimensions in mm (H x W x D)	144 x 144 x approx. 81
Battery	Type CR1/2AA, 3 V, Li-Mn
Protection class per EN 60529	Front: IP40; Rear: IP20
Assembly per IEC EN 60999-1 / DIN EN 50022	Front panel installation
Connecting phase (U / I), Single core, multi-core, fine-stranded Terminal pins, core end sheath	0.2 to 2.5 mm² 0.25 to 2.5 mm²
Environmental conditions	
Temperature range	Operation: K55 (-10 ... +55 °C)
Relative humidity	Operation: 0 to 95 % RH
Operating height	0 ... 2,000 m above sea level
Degree of pollution	2
Installation position	user-defined
Electromagnetic compatibility	
Electromagnetic compatibility of electrical equipment	Directive 2004/108/EC
Electrical appliances for application within particular voltage limits	Directive 2006/95/EC
Equipment safety	
Safety requirements for electrical equipment for measurement, regulation, control and laboratory use – Part 1: General requirements	IEC/EN 61010-1
Part 2-030: Particular requirements for testing and measuring circuits	IEC/EN 61010-2-030
Noise immunity	
Class A: Industrial environment	IEC/EN 61326-1
Electrostatic discharge	IEC/EN 61000-4-2
Voltage dips	IEC/EN 61000-4-11
Emissions	
Class B: Residential environment	IEC/EN 61326-1
Radio disturbanc voltage strength 30 – 1000 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 0.15 – 30 MHz	IEC/CISPR11/EN 55011
Safety	
Europe	CE labelling

# UMG 512-PRO

Class A power quality analyser with RCM

## Areas of application

- Continuous monitoring of the power quality
- Harmonics analysis with power quality problems
- Checking the internal supply network according to EN 61000-4-7, EN 6100-4-15, EN 61000-4-30
- Fault analysis in case of problems with the energy supply
- Documentation of the power quality for customers and regulatory authorities
- Ethernet Gateway for subordinate measurement points
- Report generator for power quality standards: EN 50160, IEE519, EN61000-2-4, ITIC ...
- Report generator for energy consumptions
- Energy Dashboard
- Remote monitoring of critical processes

## Main features

### Power quality

- Harmonics analysis up to the 63rd harmonic, even / odd (U, I, P, Q)
- Interharmonics (U, I)
- Distortion factor THD-U / THD-I / TDD
- Measurement of positive, negative and zero sequence component
- Unbalance
- Direction of rotation field
- Voltage crest factor
- Flicker measurement in accordance with DIN EN 61000-4-15
- Logging and storage of transients ( $> 39 \mu\text{s}$ )
- Short-term interruptions ( $> 10 \text{ ms}$ )
- Monitoring start-up processes

### High quality measurement

- Constant true RMS measurement
- Measurement process in accordance with IEC 61000-4-30
- Certified accuracy of measurement according to class A
- Continuous sampling of the voltage and current measurement inputs at 25,6 kHz
- 512 measurement points per period
- Recording of over 2,000 measured values per measurement cycle
- Accuracy of active energy measurement: Class 0.2S
- Fast measurement even enables the logging of rapid transients from  $39 \mu\text{s}$
- Logging of currents and voltages (15 – 440 Hz)

Fig.: UMG 512-PRO Class A certified

### RCM (Residual Current Monitoring)

- Continuous monitoring of residual currents (Residual Current Monitor, RCM)
- Alarming in case a preset threshold fault current reached
- Near-realtime reactions for triggering countermeasures
- Permanent RCM measurement for systems in permanent operation without the opportunity to switch off
- Ideal for the central earthing point in TN-S systems

### User-friendly, colour graphical display with intuitive user guidance

- High resolution colour graphical display 320 x 240, 256 colours, 6 buttons
- User-friendly, self-explanatory and intuitive operation
- Backlight for optimum reading, even in darker environments
- Illustration of measured values in numeric form, as a bar graph or line graph
- Clear and informative representation of online graphs and power quality events
- Multilingual: German, English, Russian, Spanish, Chinese, French, Turkish ...

### Various characteristics

- 4 voltage and 6 current measurement inputs
- 2 digital inputs, e.g. as data logger for S0 meter
- 2 digital outputs for alarm message or e.g. for connection to a BMS or PLC
- Free name assignment for the digital IOs, e.g. if used as data logger

### Comprehensive communication and connection possibilities

- Modbus
- Profibus
- Ethernet (TCP/IP)
- Digital IOs
- BACnet (optional)
- Configurable Firewall

### Modern communications architecture via Ethernet

- Simple integration in an Ethernet network
- Reliable and cost-optimised establishment of communication
- Ideal for Master-Slave structures
- High flexibility due to the use of open standards
- Integration in PLC systems and BMS through additional interfaces
- Various IP protocols: SNMP, ICMP (Ping), NTP, FTP ...
- Up to 4 ports simultaneous

### Measuring device homepage

- Web server on the measuring device, i.e. device's inbuilt homepage
- Function expansion possible through APPs
- Remote operation of the device display via the homepage
- Comprehensive measurement data incl. PQ (transients, events...)
- Online data directly available via the homepage, historic data optional via the APP measured value monitor, 51.00.245

### BACnet protocol for building communication

- Optimal interoperability between devices from various manufacturers
- Predefined BIBBs (BACnet Interoperability Building Block)
- BACnet is optionally available with UMG 512-PRO
- UMG 512-PRO supports the device type B-SA with the BIBBs DS-RP-B and DS-WP-B
- Furthermore, the BIBBs DS-COV-B and DM-UTC-B are also supported

### Modbus Gateway function

- Economical connection of subordinate measuring devices without Ethernet interface
- Integration of devices with Modbus-RTU interface possible (harmonisation of data format and function code necessary)
- Data can be scaled and described
- Minimised number of IP addresses required
- Tried and tested integrated solution without additional hardware

### Programming / PLC functionality

- Further processing of the measurement data in the measuring device (local intelligence)
- Monitoring and alarm functions simple to program
- Sustainable functional expansions far beyond pure measurement
- Comprehensive programming options with
  - Jasic® source code programming
  - Graphical programming
- Complete APPs from the Janitza library

Fig.: Illustration of the historic data via the homepage (APP measurement monitor)

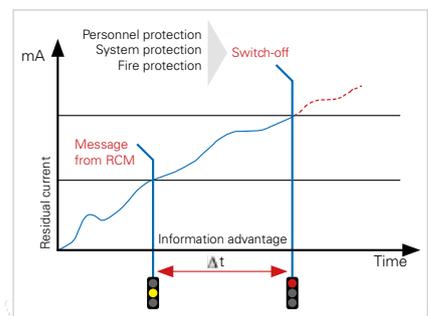

Fig.: Report prior to switching off – an aim of residual current monitoring

### Large measurement data memory

- 256 MB data memory
- Memory range up to 2 years (configuration-dependent)
- Individually configurable recordings
- Recording averaging times can be freely selected
- PQ recordings template preconfigured for conventional standards (e.g. EN 50160)
- User-defined memory segmenting possible

### Powerful alarm management

- Information available immediately by email
- Inform maintenance personnel via the powerful device homepage
- Via digital outputs, Modbus addresses, GridVis® software
- Programming via Jasic® or graphical programming
- Further alarm management functions via GridVis®-Service alarm management

### Peak load representation

- Illustration of the 3 highest monthly power peaks on the LCD display (P, Q, S)
- Rolling bar chart representation of the peak power values over 3 years on the LCD display (P, Q, S)
- Plain text representation on the LCD display (P)

### GridVis®-Basic power quality analysis software

- Multilingual
- Manual read-out of the measuring devices
- Manual report generation (power quality and energy consumption reports)
- Comprehensive PQ analysis with individual graphs
  - Online graphs
  - Historic graphs
  - Graph sets
- Integrated databases (Janitza DB, Derby DB)
- Graphical programming
- Topology views
- High memory range

### Certified quality through independent institutes

- ISO 9001
- Energy management certified according to ISO 50001
- Class A certificate (IEC 61000-4-30)
- UL certificate
- EMC-tested product

Supply voltage DC	80 ... 300 V DC	24 ... 150 V DC
<b>Device options</b>		
BACnet communication	52.17.081	52.17.081

General information	
Use in low, medium and high voltage networks	•
Accuracy voltage measurement	0.1 %
Accuracy current measurement	0.1 %
Accuracy active energy (kWh, .../5 A)	Class 0.2S
Number of measurement points per period	512
Seamless measurement	•
<b>RMS - momentary value</b>	
Current, voltage, frequency	•
Active, reactive and apparent power / total and per phase	•
Power factor / total and per phase	•
<b>Energy measurement</b>	
Active, reactive and apparent energy [L1, L2, L4, L3, Σ L1-L3, Σ L1-4]	•
Number of tariffs	8
<b>Recording of the mean values</b>	
Voltage, current / actual and maximum	•
Active, reactive and apparent power / actual and maximum	•
Frequency / actual and maximum	•
Demand calculation mode (bi-metallic function) / thermal	•
<b>Other measurements</b>	
Operating hours measurement	•
Clock	•
Weekly timer	Jasic®
<b>Power quality measurements</b>	
Harmonics per order / current and voltage	1st - 63rd
Harmonics per order / active and reactive power	1st - 63rd
Distortion factor THD-U in %	•
Distortion factor THD-I in %	•
Voltage unbalance	•
Current and voltage, positive, zero and negative sequence component	•
Flicker	•
Transients	> 39 μs
Error / event recorder function	•
Short-term interruptions	10 ms
Oscillogram function (wave form U and I)	•
Ripple voltage signal	•
Under and overvoltage recording	•
<b>Measured data recording</b>	
Memory (Flash)	256 MB
Average, minimum, maximum values	•
Measured data channels	10
Alarm messages	•
Time stamp	•
Time basis average value	freely user-defined
RMS averaging, arithmetic	•

Technical data	
Type of measurement	Constant true RMS up to the 63rd harmonic
Nominal voltage, three-phase, 4-conductor (L-N, L-L)	417 / 720 V AC <sup>*2</sup>
Nominal voltage, three-phase, 3-conductor (L-L)	600 V AC
Measurement in quadrants	4
Networks	TN, TT, IT
Measurement in single-phase/multi-phase networks	1 ph, 2 ph, 3 ph, 4 ph and up to 4 times 1 ph
Measured voltage input	
Overvoltage category	600 V CAT III
Measured range, voltage L-N, AC (without potential transformer)	0 <sup>*3</sup> ... 600 Vrms
Measured range, voltage L-L, AC (without potential transformer)	0 <sup>*3</sup> ... 1000 Vrms
Resolution	0.01 V
Impedance	4 MOhm / phase
Frequency measuring range	15 ... 440 Hz
Power consumption	approx. 0.1 VA
Sampling frequency	25,6 kHz / phase
Measured current input	
Rated current	1 / 5 A
Resolution	0.1 mA
Measurement range	0.005 ... 7 Amps
Overvoltage category	300 V CAT III
Measurement surge voltage	4 kV
Power consumption	approx. 0.2 VA (Ri = 5 MOhm)
Overload for 1 sec.	120 A (sinusoidal)
Sampling frequency	25,6 kHz

Comment:  
For detailed technical information please refer to the operation manual and the Modbus address list.

• = included - = not included

<sup>\*1</sup> Optional additional functions with the packages  
GridVis®-Professional, GridVis®-Service and  
GridVis®-Ultimate.

<sup>\*2</sup> With UL variants: 347/600 V

<sup>\*3</sup> The device can only determine measured values, if an L-N voltage of greater than 10 Veff or an L-L voltage of greater than 18 Veff is applied to at least one voltage measurement input.

Digital inputs and outputs	
Number of digital inputs	2
Maximum counting frequency	20 Hz
Reaction time (Jasic® program)	200 ms
Input signal present	18 ... 28 V DC (typically 4 mA)
Input signal not present	0 ... 5 V DC, current < 0.5 mA
Number of digital outputs	2
Switching voltage	max. 60 V DC, 30 V AC
Switching current	max. 50 mA Eff AC / DC
Output of voltage dips	10 ms
Pulse output (energy pulse)	max. 20 Hz
Maximum cable length	up to 30 m unshielded, from 30 m shielded
Mechanical properties	
Weight	1080 g
Device dimensions in mm (H x W x D)	144 x 144 x approx. 81
Battery	Type Li-Mn CR2450, 3 V (approval i.a.w. UL 1642)
Protection class per EN 60529	Front: IP40; Rear: IP20
Assembly per IEC EN 60999-1 / DIN EN 50022	Front panel installation
Connecting phase (U / I), Single core, multi-core, fine-stranded Terminal pins, core end sheath	0.2 to 2.5 mm <sup>2</sup> 0.25 to 2.5 mm <sup>2</sup>
Environmental conditions	
Temperature range	Operation: K55 (-10 ... +55 °C)
Relative humidity	Operation: 0 to 95 % RH
Operating height	0 ... 2,000 m above sea level
Degree of pollution	2
Installation position	user-defined
Electromagnetic compatibility	
Electromagnetic compatibility of electrical equipment	Directive 2004/108/EC
Electrical appliances for application within particular voltage limits	Directive 2006/95/EC
Equipment safety	
Safety requirements for electrical equipment for measurement, regulation, control and laboratory use – Part 1: General requirements	IEC/EN 61010-1
Part 2-030: Particular requirements for testing and measuring circuits	IEC/EN 61010-2-030
Noise immunity	
Class A: Industrial environment	IEC/EN 61326-1
Electrostatic discharge	IEC/EN 61000-4-2
Voltage dips	IEC/EN 61000-4-11
Emissions	
Class B: Residential environment	IEC/EN 61326-1
Radio disturbance voltage strength 30 – 1000 MHz	IEC/CISPR11/EN 55011
Radiated interference voltage 0.15 – 30 MHz	IEC/CISPR11/EN 55011
Safety	
Europe	CE labelling
USA and Canada	UL variants available
Firmware	
Firmware update	Update via GridVis® software. Firmware download (free of charge) from the website: <a href="http://www.janitza.com">http://www.janitza.com</a>

# MRG 96RM-E RCM Flex & MRG 512-PRO PQ Flex

## Areas of application

- High quality PQ analysis at class A level (IEC 61000-4-30)
- Temporary measurement e.g. for the design of power factor correction systems
- Analysis of electrical disturbances in the event of PQ problems
- Fault analysis with power quality problems
- High quality comparative measurement of energy measurement devices and meters
- Calibration of measurement devices (ISO 50001 audit)
- Recording of residual currents over an external current transformer (not included in the scope of delivery)

## Main features

- Monitoring of the power quality
- Capturing of all power quality parameters (harmonics, short-term interruptions, asymmetries etc.)
- Remote access via Ethernet and embedded web server
- GridVis® PQ analysis software
- Standard PQ reports, depending on the version:  
EN 50160 , IEEE519, ITIC, EN 61000-2-4
- Cost centre report
- Large 256 MB internal memory for storing measurement data
- UPS-supported power supply for up to 3 hours

Fig.: MRG 512-PRO PQ Flex –  
Portable power quality analyser with RCM  
(Image similar)

### **MRG 512-PRO PQ Flex: User-friendly, colour graphical display with intuitive user guidance**

- High resolution graphics display
- User-friendly, self-explanatory and intuitive operation
- Clear and informative representation of online graphs and further power quality events

### **Modern communications architecture via Ethernet**

- Ethernet interface and web server
- Faster, better cost-optimised and more reliable communication system
- High flexibility due to the use of open standards

Fig.: MRG 96RM-E RCM Flex –  
Portable energy measurement device with RCM  
(Image similar)

### **Large measurement data memory**

- 256 MByte
- Recording range of up to 2 years, depending on the recording configuration
- Recording freely configurable

### RCM (Residual Current Monitoring)

- Continuous monitoring of residual currents (Residual Current Monitoring, RCM)
- Alarming in case a preset threshold fault current reached
- Near-realtime reactions for triggering countermeasures
- Permanent RCM measurement for systems in permanent operation without the opportunity to switch off
- Ideal for the central earthing point in TN-S systems

### Graphical programming (only MRG 512-PRO)

- Comprehensive programming options (PLC functionality)
- Jasic® source code programming
- Sustainable functional expansions far beyond pure measurement
- Complete APPs from the Janitza library

### Scope of delivery for the MRG product range

- Compact, robust plastic housing with measurement device and all connections
- UPS-supported power supply for up to 3 hours
- Supplementary description for each measurement device
- Operation manual for each measurement device
- DVD with following content:
  - Programming software GridVis®-Basic
  - Functional description - GridVis®
- Carry soft bag for accessories
- Mains connection cable
- 1 Crossover patch cable, CAT5e
- 1 set of voltage measuring cables with fuses (brown, black, grey, blue, green/yellow)
- Voltage tap-offs
- 2 connection cable 3 m for residual current measuring with connector
- Incl. Rogowski coil Ø 95 mm (MRG 96RM-E RCM Flex), Ø 175 mm (MRG 512-PRO PQ Flex); length 300 mm

### Optional accessories:

Differential current transformer on request.

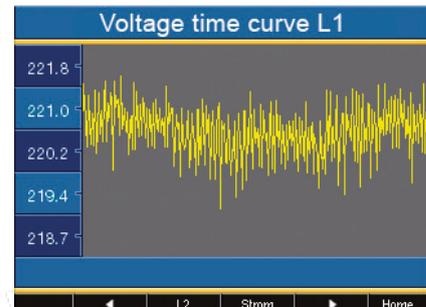

Fig.: Colour graphical display MRG 512-PRO PQ Flex – Example voltage profile over time

# 03 Energy management

## ProData® data logger

Page 03/2

- Compact and universal data logger
- Acquisition of electrical and non electrical values
- Modbus Ethernet Gateway functionality enables simple integration of slave devices

## Field bus modules series FBM

Page 03/8

- Decentralised I/O field bus modules
- Connection with master devices via RS485 interface
- Seamless recording of various measurement and process data

# ProData® DATA LOGGER

Ethernet

Modbus-Ethernet gateway

Memory 32 MB

Pulse inputs and  
Pulse outputs

Thermistor input

Threshold value monitoring

**Smart and compact:**

**Save energy costs through the universal data logger**

- Basis for a comprehensive energy management system (ISO 50001)
- Mapping of all consumption and process data (current, water, gas, steam, pressure, etc.)
- Monitoring of switching statuses (e.g. circuit breaker, etc.)
- Analysis of energy consumption and operating hours
- Flexible integration in superordinate systems (Modbus-Ethernet gateway)
- Long-term storage of data with 32 MB onboard memory
- Saving of 24 differential monthly energy values as well as maximum power values - for each of the fifteen individual inputs on board
- Direct reading out and analysis of data via GridVis® software
- Free programming of 64 independent weekly timers
- Tariff conversion: Each digital input can be assigned a selected tariff from 1 to 8

**Universal data logger for all consumption media**

- 15 digital / pulse inputs
- 3 digital outputs, switchable via Modbus, weekly timer, threshold value and temperature monitoring
- Temperature measurement input
- Ethernet interface (ModbusTCP/IP, NTP ...)
- RS485 (Modbus RTU, slave, up to 115 kbps)
- 32 MB flash data memory
- Clock and battery function
- 64 weekly timers
- Threshold value monitoring
- Modbus-Ethernet gateway functionality
- Saving of minimum and maximum values (with time stamp)
- Configurable records, can be read out via RS485 and Ethernet

**Applications**

- EnMS per ISO 50001
- Integration of previously installed pulse counters in an EnMS
- Logging of non-electrical values
- Generation of performance indicators (key figures)
- Logging and monitoring of status messages
- Generation of alarms
- Ethernet-Modbus-Slave gateway

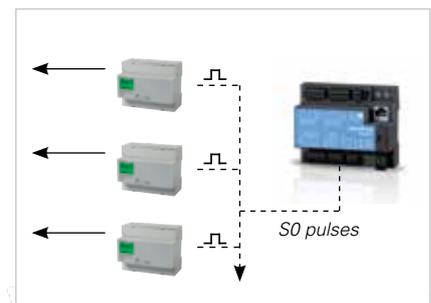

Fig.: Easy integration of existing meters

Fig.: Consolidation of diverse consumption media

### Ethernet with gateway functionality

- Communication via Ethernet and Modbus RS485
- Simple integration in the LAN network
- Rapid and reliable data transfer
- Access to measurement data via various channels

### Simple integration of existing meters

- Via Modbus-Ethernet Gateway integration and read-out of subordinate Modbus slave devices (e.g. electricity meters) possible with ease
- Conveniently capture measurements from all brands of meter with an S0 pulse output

### Well thought-out to the last (vital) detail

- Internal clock generates precise data and time information for records and events
- Permanent operation of the clock thanks to integrated emergency battery
- Battery not permanently installed; as such convenient replacement possible

### The ProData is the practical person's favourite

- Wide range power adapter (20 – 250 V AC, 20 – 300 V DC)
- Auto-Baud detection of the communication interface
- Screwable plug-in terminals
- Modbus address easily externally adjustable
- Rapid DIN rail installation

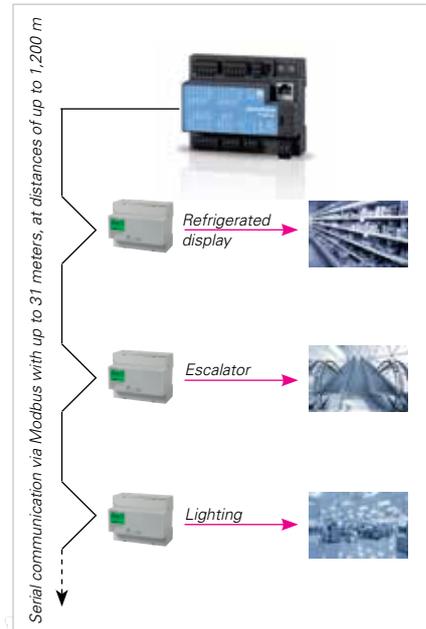

Fig.: Simple consolidation of Modbus meters

# FIELD BUS MODULES SERIES FBM

## Chapter 03

### Field bus modules series FBM

#### Decentralised I/O field bus module series FBM10

- RS485 interface
- Protocol Modbus RTU
- Can be used as a slave device to the measurement devices from series UMG 604-PRO, UMG 605-PRO, UMG 508, UMG 509-PRO, UMG 511 and UMG 512-PRO
- Also possible to connect over a distance of 1,000 m to the RS485 Modbus Master interface of the device; either via Profibus cable or e.g. a cable of type Li2YCY(TP) 2 x 2 x 0.22
- Modules are available pre-configured and programmed according to the selected measurement device

#### Use of the modules FBM10I and FBM10R

- Consolidation of various input and output signals in order to distribute to the respective participants
- Connection with the respective Modbus master from the device series UMG 604-PRO, UMG 605-PRO, UMG 508, UMG 509-PRO, UMG 511 or UMG 512-PRO is required in order to use the field bus modules.
- All data points are integrated into the Janitza system
- Detection of a wide range of key variables such as process data, states, error messages, threshold values, alarm outputs, etc.
- Archiving and visualisation via the software GridVis®

#### Example of using the inputs

- Tariff conversion
- Synchronising measurement periods
- Error messages
- State measurements

#### Example of using the outputs

- Threshold value outputs for measured values

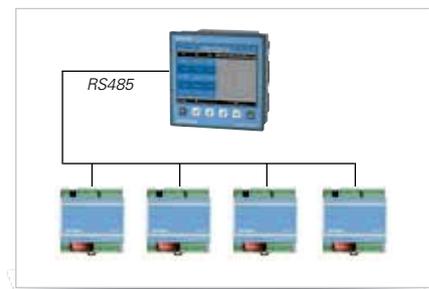

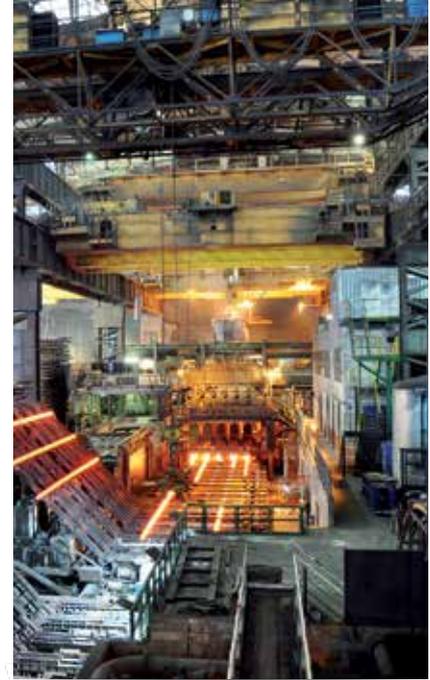

Fig.: Connection of the I/O field bus modules takes place via the RS485 interface of the UMG measurement device

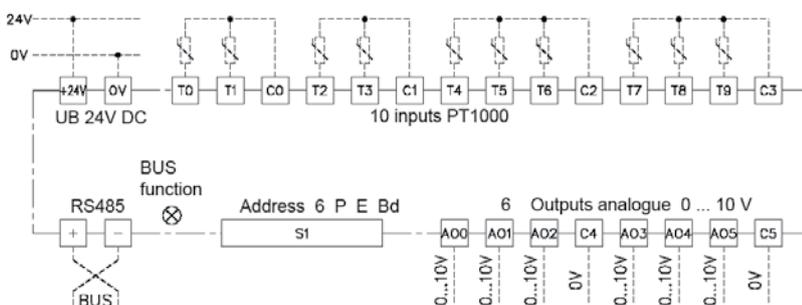

Fig.: Connection diagram FBM10 PT1000/PT100; thermistor input 2-wire

### Use of the FBM10PT1000 module

- Temperature field bus module
- Logging of up to 10 temperature measurements (e.g. via PT100 or PT1000)
- The recording and visualisation of the measured values takes place with the aid of UMG 604-PRO, UMG 605-PRO, UMG 508, UMG 509-PRO, UMG 511 or UMG 512-PRO and the required expansion (see chapter 04 APPs – Expansion with know-how)

Fig.: Following the APP installation it is also possible to save the values.

### Example

- Temperature monitoring
- Temperature logging

Field bus modules series FBM					
Type	Relay outputs	Digital inputs* <sup>1</sup>	Analogue inputs* <sup>2</sup>	Thermistor inputs	Item no.
FBM10I* <sup>3</sup>	–	10	–	–	15.06.076
FBM10PT1000* <sup>3</sup>	–	–	–	10	15.06.077
FBM10R-NC* <sup>3</sup>	10	–	–	–	15.06.078
FBM DI8-AI8* <sup>3</sup>	–	8	8	–	15.06.079

\*<sup>1</sup> Only state message

\*<sup>2</sup> 4 – 20 mA

\*<sup>3</sup> The modules are not suitable for the ProData in gateway operation.

General technical data	
Supply voltage	24 V DC ±20 %
No-load current	20 mA
Interface, protocol	RS485, Modbus-RTU
Transmission rate	4,800 to 38,400 Bit/s
Digital input	24 V DC, 5 mA
Relay outputs	24 V DC 0.5 A / 250 V / 3 A AC1 / 2 A AC3
Ambient temperature	-10 ... +50 °C
Accuracy	<0.1 % for temperature measurement PT1000
EMC	per EN 55011
Terminal	plug-in terminals up to 1 mm <sup>2</sup>
Housing	45 mm installation row system 90 x 88 x 58 mm (H x W x D)
Installation	top-hat rail
Humidity	<95 % rel. humidity non-condensing
Protection class	IP20
Standards	CE conformity

# JANITZA SOFTWARE AND IT SOLUTIONS

# Janitza software & IT solutions

Fig.: The device's own homepage

#### UMG measurement devices – homepage & APPs

- Display the measured values via the device's own homepage
- Expansions (APPs) for various different UMG measurement devices

#### Energy portal

- Cloud solution for energy management
- No investment in software, databases and IT infrastructure required
- Simple summarization of all energy data from different locations

Fig.: Energy-Portal

#### GridVis®-Basic

Free basic version:

- Maximum of five measuring devices
- Graphs and analysis tools
- Database (Jan-DB)
- Reports:
  - NEW starting with version 7.3\*: Commissioning report
  - Energy and consumption reports
  - PQ reports (EN 50160, EN 61000-2-4 etc.)
  - Fault monitoring/RCM report

#### GridVis®-Professional

As GridVis®-Basic, but with the following additional features:

- Unlimited number of devices and data points
- Database driver (MSSQL, MySQL)
- Automation (readout, time setting, etc.)
- Virtual measuring devices and logic
- User administration

#### GridVis®-Service

As GridVis®-Professional, but with the following additional features:

- NEW starting with version 7.3\* – Enhanced reports:
  - High availability
  - LET (Limits, Events, Transients)
  - Energy billing
- NEW starting with version 7.3\*: COMTRADE & MSCONS Export
- Service, including REST API
- Online recorder
- Alarm management
- Measurement and consumption data export (CSV)
- Third party devices (generic Modbus)
- Enhanced automation: Reports, database actions, E-mail/alerting, cost centers and rate formation

#### GridVis®-Ultimate

As GridVis®-Service, but with the following additional features:

- Web interface GridVis®-Energy
- Enhanced user administration
- Dashboard and template manager
- Widgets
- Key performance indicator evaluation (KPI)
- Sankey diagram (energy flow analysis)
- Device overview with graph function
- NEW starting with version 7.3\*: OPC UA Client
- NEW starting with version 7.3\*: Image and symbol library

\* Available as of July 2018

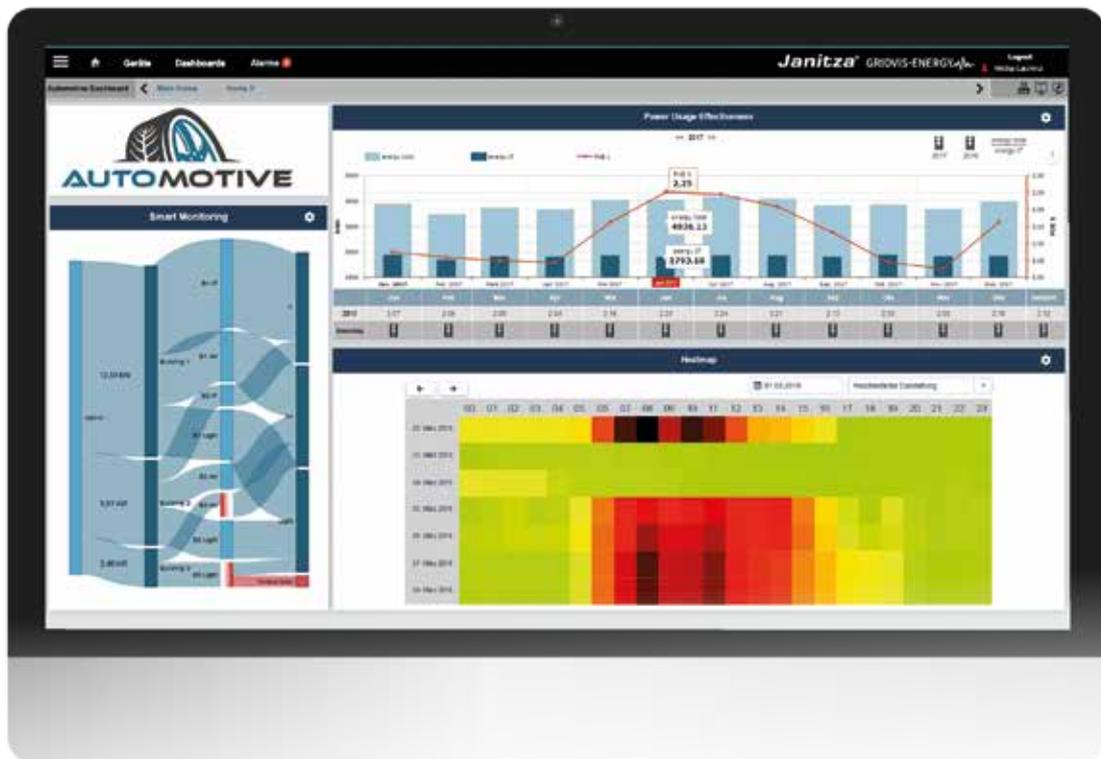

# GridVis® – Grid visualisation software

# GridVis®

Three applications in a single software tool: energy management, power quality, ground fault monitoring (RCM)

GridVis® reveals potential energy savings. In addition, the measured parameters measured can be analyzed to detect possible production stoppages at an early stage and thus to optimize your operating equipment uptime. The scalable, user-friendly software is perfect for building standard-compliant energy, fault monitoring/RCM and power quality monitoring systems.

## Energy management (EnMS)

Certified in accordance with ISO 50001. You are on the safe side with Janitza GridVis® when it comes to topics such as energy management.

## Transparency

Keep track of consumption data and costs. Recognize cost generators as well as problems in the power quality. Discover rising fault currents and overloads. Define key performance figures from consumption and measurement data in line with the specifications of ISO 50006.

## Network analysis & evaluation

Analyze and evaluate measurement data. The GridVis® software offers numerous functions, such as statistics, line diagrams, pie charts, heat maps, CBE-MA curves, continuous lines, tables, Sankey diagrams, key performance indicators, etc. The functions can be designed intuitively. Measurement data can be analyzed as required by the user.

## Safety & alarm management

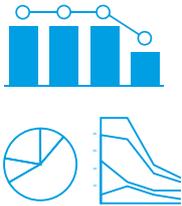

Monitor limit values of measured variables, consumption data, residual currents as well as device communication. Reliable alerting via e-mail and the web interface. With Janitza's GridVis® measurement technology and network visualization software, you give your company more reliability and safety.

## Visualization & documentation

Web visualization in line with your needs. Quickly and easily create your own dashboards and overview with a large selection of functions and graphics, without programming skills. Benefit from prepared reports and documentation on the topics of energy management, power quality and residual current monitoring.

## Open system

Regardless of whether it's OPC UA, REST API or CSV, we offer many data import and export options as well as data access options. An open and future-proof system. Third-party devices can be easily integrated via OPC UA or Modbus. No other system offers more connectivity.

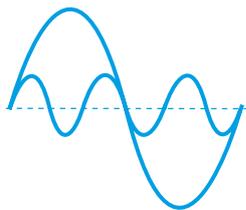

- FREE LAYOUT DESIGN
- APPLICATION-ORIENTED FUNCTIONS

## Visualization

Design your own overviews with numerous functions and graphics

- Professional editor for the creation of dashboards
- Dashboards and templates: free design of overviews
- User management and regulation of access rights
- Numerous widgets and functions: line diagrams, bar charts and pie charts, heat maps, Sankey diagrams, key performance indicators (KPI), tables, indicators, continuous lines, weather, live values, links and much more.

- PROFESSIONAL TOOLS FOR EVALUATING ALL MEASUREMENT AND CONSUMPTION DATA

## Analysis & Evaluation

All details in an overview, with our tools for analyzing and evaluating your measurement data

- Result and transient browser
- Graph and graph set functions
- Statistical evaluations
- CBEMA curve
- Continuous line
- Dashboards & widgets
- Ground fault monitoring (RCM) analysis

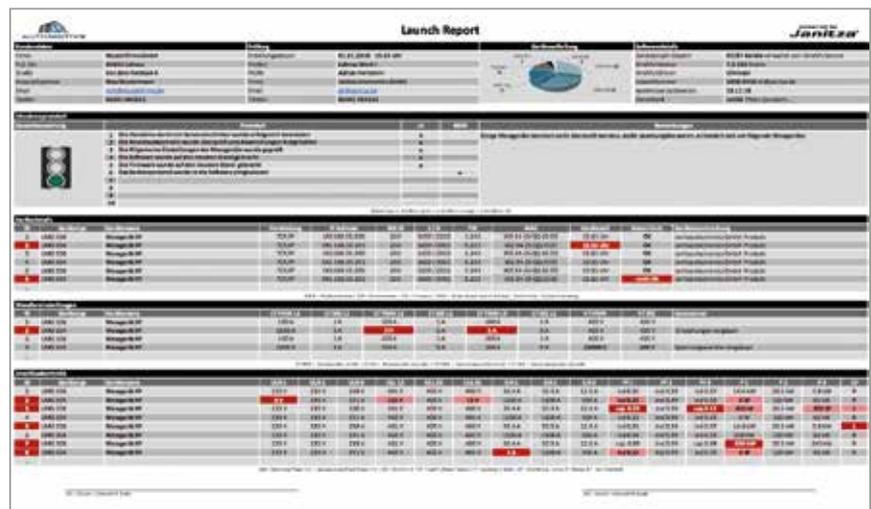

Fig.: GridVis® Launch-Report

## Documentation

### Reports optimized for EnMS, power quality and ground fault monitoring (RCM)

- EN 50160 & EN 61000-2-4 evaluation
- High availability analysis as well as statistical analyses
- Results, transients and limit-value violation
- Energy overviews
- Energy billing
- Residual current analysis
- System acceptance

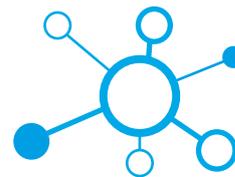

- XLS- UND PDF-OUTPUT
- AUTOMATIC E-MAIL SENDING

## Connectivity

### Data access, data export and import made easy

- OPC UA client and server (optional)
- REST API (M2M solution)
- Modbus third-party devices
- CSV, XLS import & export
- GridVis® Collector (mobile data collector)
- MSCONS (Lastprofil und Zählerdaten)
- COMTRADE (transients and events)

- FUTURE-PROOF SOLUTIONS
- OPEN SYSTEM
- THE LATEST TECHNOLOGIES

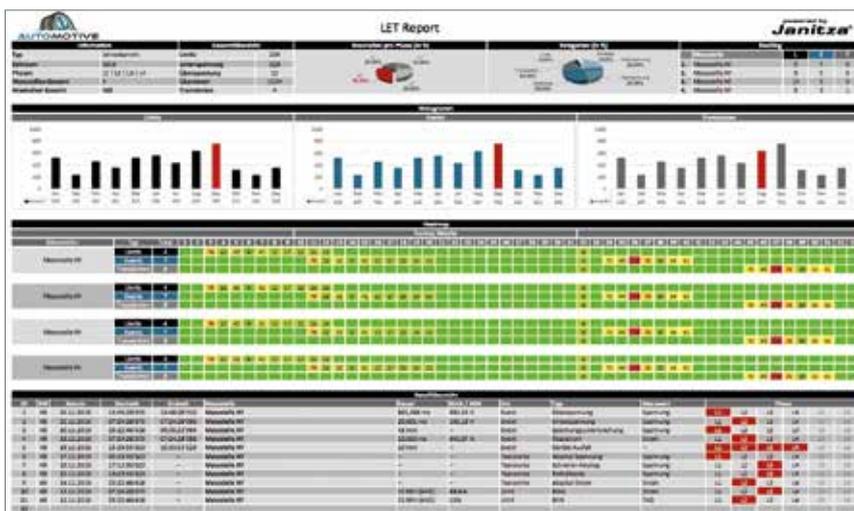

Fig.: GridVis® LET-Report

- HIGH AVAILABILITY
- RELIABILITY AND SAFETY THROUGH MONITORING
- MEASUREMENT TECHNOLOGY AND MEASURED VALUES UNDER CONTROL

## Alerting

### System and energy monitoring at the highest level

- Monitoring communication, limit values and much more
- Alerting via web UI, e-mail or external program
- Acknowledgement requirement with logging & history
- Escalation levels for needs-based alerting
- Full access to measurement data and communication parameters

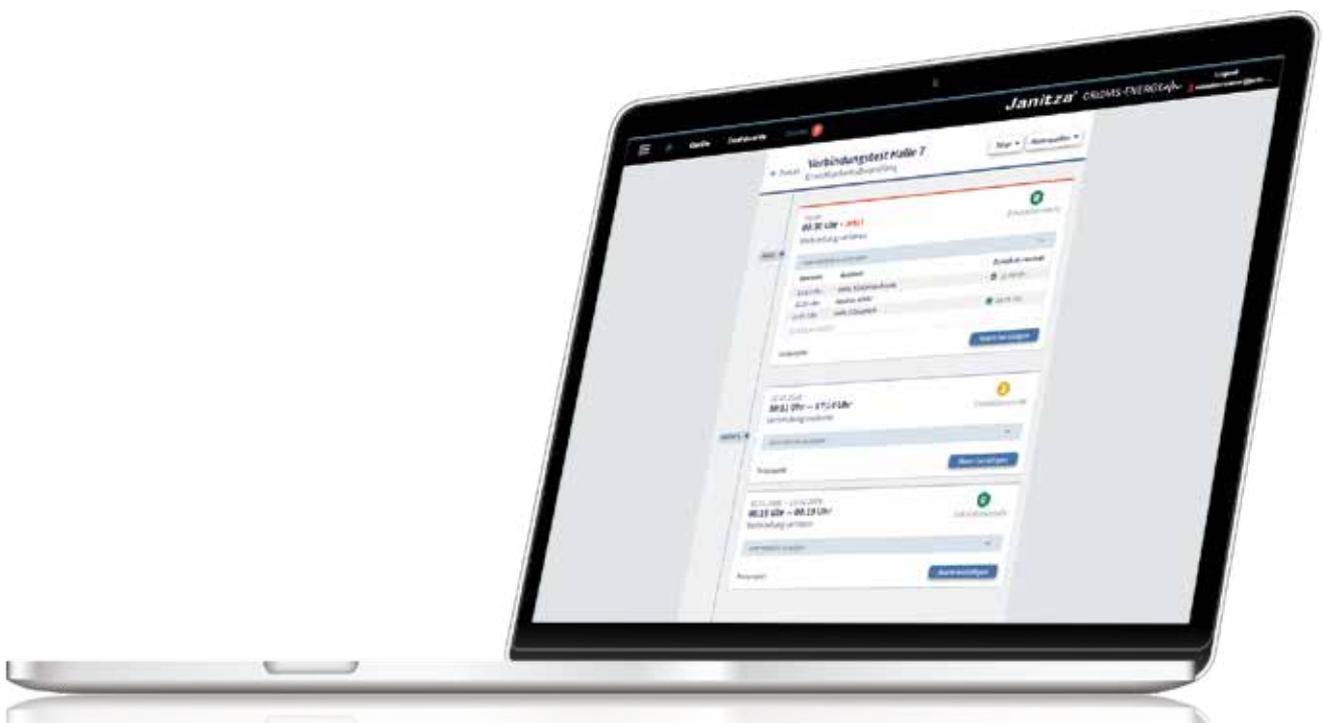

- TIME TASK MANAGEMENT
- EASY SYSTEM HANDLING THROUGH AUTOMATION FUNCTIONS

## Automation

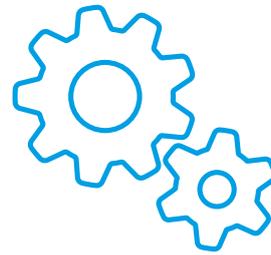

### Plan the functions and automate your system

- Planning of device readouts, time synchronization, report creation or e-mail sending
- Automatic data import
- Database management with automation functions
- Shift schedules and rates

## Web interface

- Dashboards and widgets
- No local installation required

## Engineering Tool

- Local installation
- Commissioning and parameterization of measuring devices
- Analysis and evaluation

## Database

- Jan DB (database in the scope of delivery)
- MySQL (driver) ■ MSSQL (driver)

## Service

- Background process
- Operable without registered users

## User administration & language

- Password protection and access control
- User management
- German, English, Spanish

## Virtual measurement points & logic

- Measurement points without measuring device
- Mathematic operations

## Data recording & device configuration

- Memory readout
- Online recorder
- Device parameterization

## GridVis® editions – the right package of functions for every requirement profile

### GridVis® – ULTIMATE

51.00.190

#### Like GridVis®– Service, plus:

- Web interface GridVis®-Energy
- Enhanced user administration
- Dashboard and template manager
- Widgets
- Key performance indicator evaluation (KPI)
- Sankey diagram (energy flow analysis)
- Device overview with graph function
- NEW starting with version 7.3\*: OPC UA Client
- NEW starting with version 7.3\*:  
Image and symbol library

### GridVis® – SERVICE

51.00.180

#### Like GridVis®– Professional, plus:

- NEW starting with version 7.3\*:  
Enhanced reports:
  - High availability
  - LET (Limits, Events, Transients)
  - Energy billing
- NEW starting with version 7.3\*:  
COMTRADE & MSCONS Export
- Service, including REST API
- Online recorder
- Alarm management
- Measurement and consumption data export (CSV)
- Third party devices (generic Modbus)
- Enhanced automation:
  - Reports
  - Database actions
  - E-mail/alerting
  - Cost centers and rate formation

GridVis® – PROFESSIONAL

51.00.160

**Like GridVis® – Basic, plus:**

- Unlimited number of devices and data points
- Database driver (MSSQL, MySQL)
- Automation (readout, time setting, etc.)
- Virtual measuring devices and logic
- User administration

GridVis® – BASIC

51.00.116

**Free basic version:**

- Maximum of five measuring devices
- Graphs and analysis tools
- Database (Jan-DB)
- Reports:
  - NEW starting with version 7.3\*:
    - Commissioning report
    - Energy and consumption reports
    - PQ reports (EN 50160, EN 61000-2-4 etc.)
    - Fault monitoring / RCM report

\* Available as of July 2018

## Rely on connectivity and a professional altering on the web

With GridVis® 7.3, Janitza has expanded the powerful GridVis® to include many interesting functions. Add-on tools (e.g. the OPC UA server and GridVis® Collector), which are not included in the standard functions package, expand your options for data collection and processing.

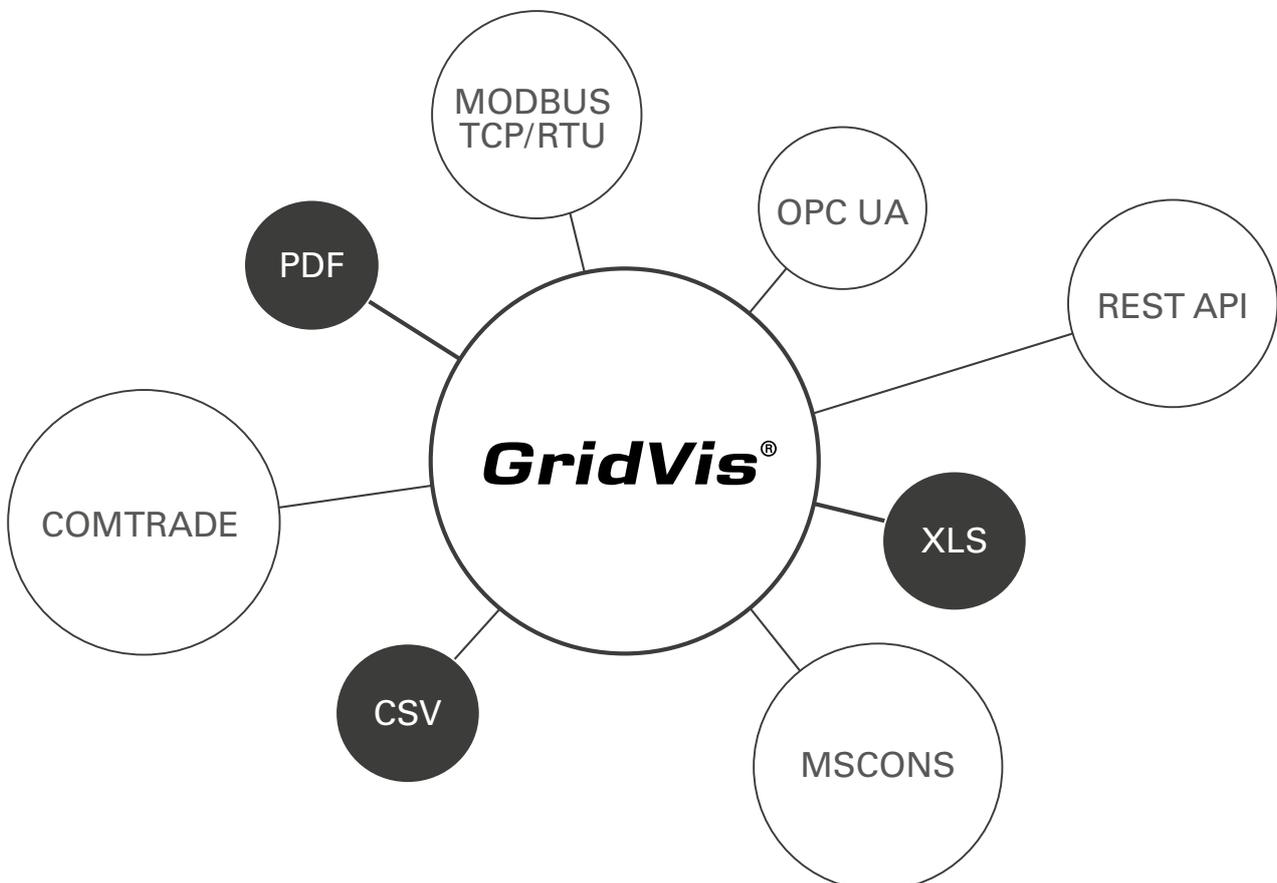

### Expanded functions of GridVis® 7.3:

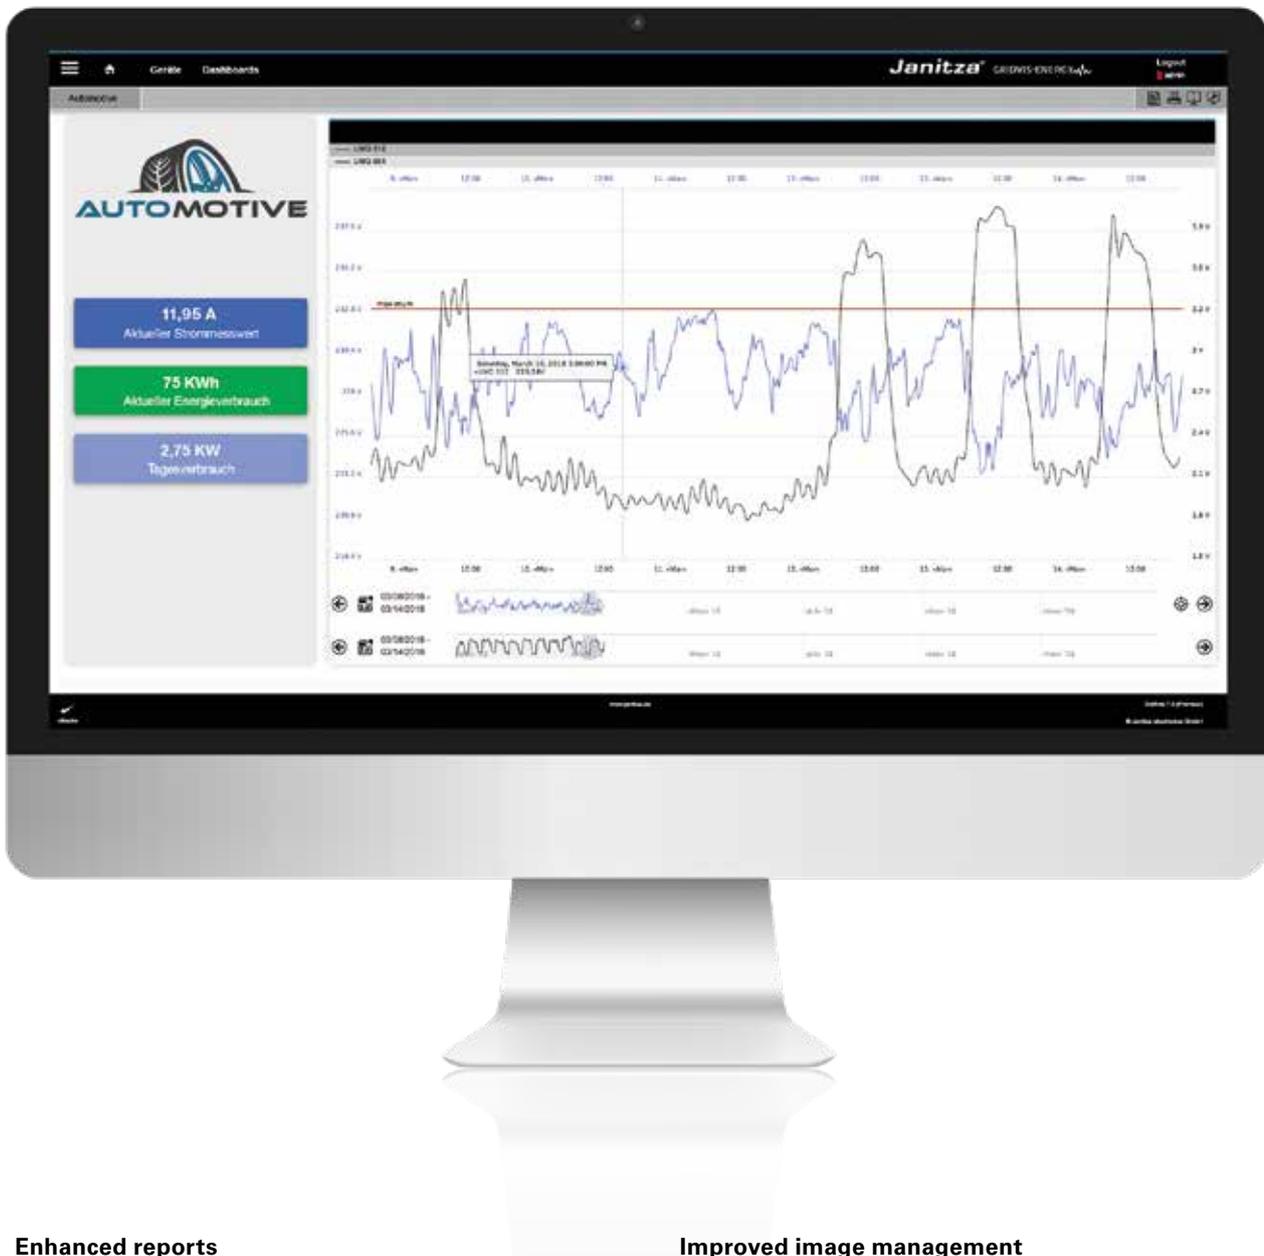

#### Connectivity

- OPC UA client: fully integrate the OPC UA server in our system, use the values for mathematical operations, key performance indicators or record them with our online recorder.
- COMTRADE export
- MSCONS export

#### Alarm list in the WEB

- User-friendly and intuitive web interface
- Acknowledgment and history on the web
- Search and filter functions

#### Enhanced reports

- High availability report – maximum system reliability with statistical evaluation
- LET report – events, transients, limit value violations
- Energy billing calculation – support of price groups, performance values and extra reactive energy, rates
- Commissioning report – acceptance protocol with connection check

#### Improved image management

- Pre-installed image and symbol library
- Grouping and search function

#### New line diagram

- Simple and intuitive configuration
- Dual time axis mode
- Limit value line
- Continuous line as a function
- Improved layout design

## GridVis® Collector – mobile data readout

As a mobile unit, the GridVis® Collector makes it possible to read out measurement data from Janitza measurement devices on site without a communication connection. This data can be compared and evaluated in a project with other measurement points. With a battery runtime of up to 9 hours, the GridVis® Collector can manage up to 200 measuring devices. The handling is easy to understand and can be done by a qualified electrician in just a few easy steps.

The synchronization of measurement data with a locally installed GridVis® can be done via Ethernet or WLAN.

The GridVis® Collector offers the ideal solution for collecting measurement data in local network stations or other autonomous electrical distribution systems, which do not have a wireless or network connection.

**GridVis® Collector**  
Item no. 51.00.400

The GridVis® Collector is not part of a GridVis® edition and can be purchased as an option.

## OPC UA server – increase your connectivity

Increase the connectivity with the OPC UA server. In addition to the OPC UA client (part of the GridVis® Edition Ultimate), Janitza offers you an OPC UA server. With the OPC UA server, measured values, key performance indicators and other numerical values can be provided directly to an OPC UA client and processed further. In addition to the direct GridVis® connection, the OPC UA server also offers KNX, SNMP as well as BACnet clients.

The additionally installed server communicates directly with GridVis® and offers online values for all of the devices and functions incorporated in GridVis®. The OPC UA server is not a part of a GridVis® edition. It can be purchased as an option.

We would be happy to create an offer for you. The prices are based on the required data points.

OPC UA Server 250	item no. 51.00.151
OPC UA Server 1000	item no. 51.00.152
OPC UA Server 2500	item no. 51.00.153
OPC UA Server 10000	item no. 51.00.154

## Services

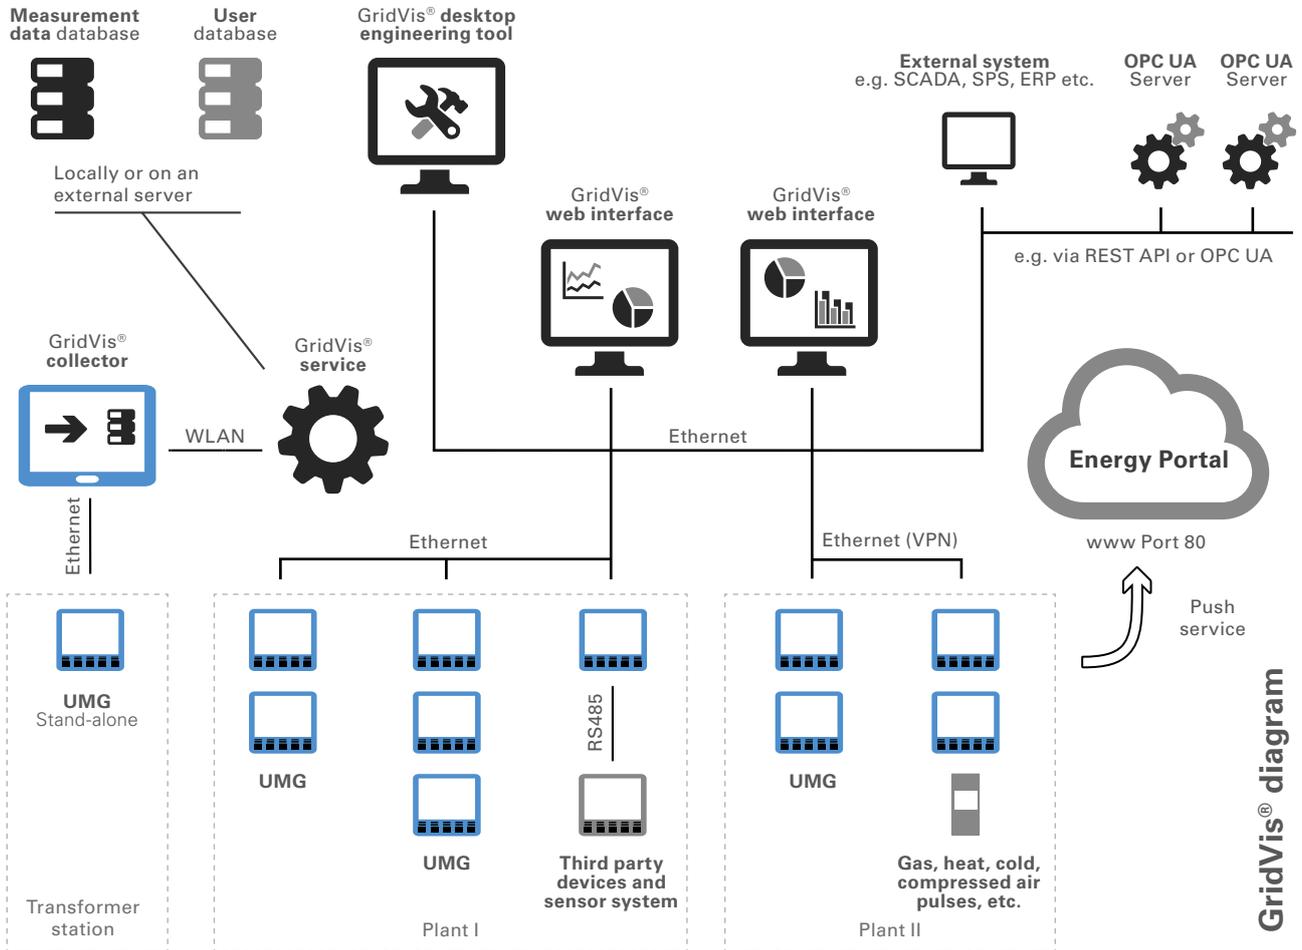

*Our support engineers as well as a network of professional solution partners offer you a large range of services. From installation or retrofitting, or the complete commissioning of the entire measurement system, to the power quality analysis by certified experts.*

### TRUST IN A STRONG PARTNER

#### **Extensive service**

Benefit from custom in-house training workshops and seminars and a diverse range of training courses at our training center in Lahnau. Professional consultation and support services are free for GridVis® customers. We will provide you with on-site assistance during your commissioning and offer fair maintenance contracts to ensure optimal system availability. Customized adjustments to reports are possible.

You can rely on a partner with an extensive product portfolio and many years of experience. As a partner with experience and know-how in numerous industries, we can help you to integrate a perfect solution in your company.

\*1 SQL database is not included in the scope of deliverables.

\*2 New starting with version 7.3, available as of July 2018

\*3 This feature is only available in conjunction with GridVis® installation on the desktop.

Number of devices: Max. number of simultaneously loaded devices (e.g. within the basic version: a project with 5 devices or 5 projects with one device).

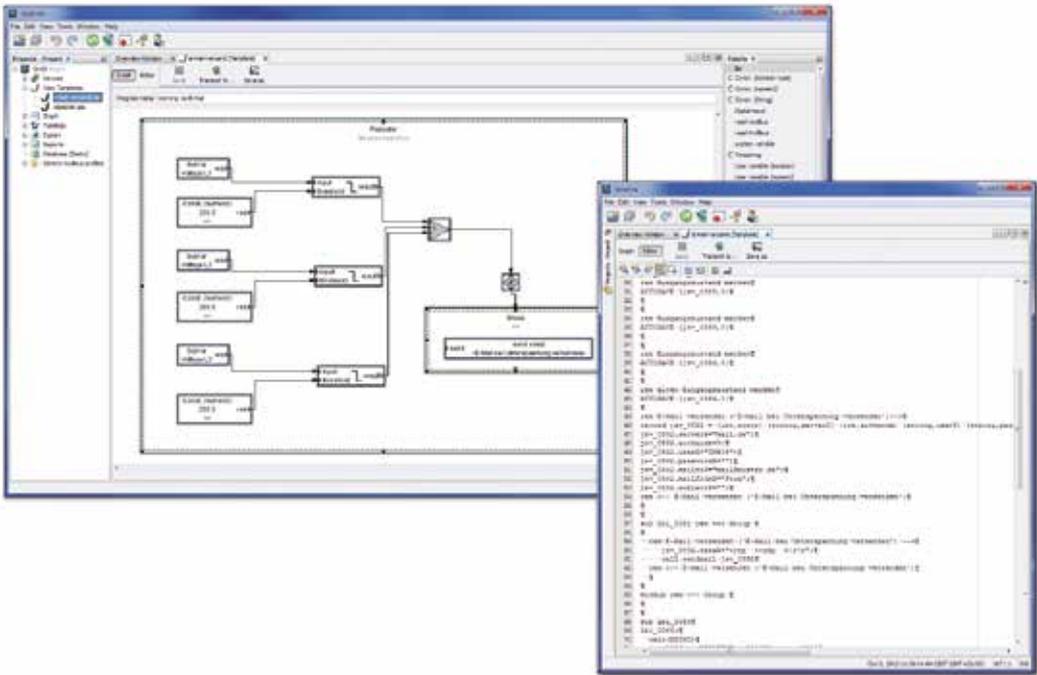

Update period: Time period in which new versions can be installed free of charge.

Automatic read-out: Device read-out in accordance with freely configurable time plans.

Online logging: Measurement data from devices without memory will be averaged in the GridVis® software.

Service: The GridVis® software runs in the background and will be started automatically. Devices can be readout time-independent and automatically. For configuration and data processing the desktop installation is required.

# Jasic® PROGRAMMING LANGUAGE

# Manifold programming options

- Special programming / script language for the measurement devices UMG 604-PRO / UMG 605-PRO / UMG 508 / UMG 509-PRO / UMG 511 and UMG 512-PRO
- The user is no longer restricted to the functionalities integrated in the measurement device, but rather the device can be expanded to suit the individual's requirements
- Graphical programming supports the creation and configuration of mathematical functions and logical links
- The devices' own digital outputs can be set
- Digital inputs can be easily evaluated
- The processing and writing of registers belonging to external devices can be implemented via the Modbus
- Free configuration of threshold value infringements, timer functions or recording of special values can be implemented
- Programs created can be stored as files or transferred directly to the measurement device
- There are 7 memory spaces available, each with 128 kByte, for the saving of the programs
- Simultaneous operation of these 7 programs possible
- User-friendly, graphical programming
- Free programming of the Jasic® source code by the user

# Graphical programming: Examples

## Example of threshold value monitoring (comparator)

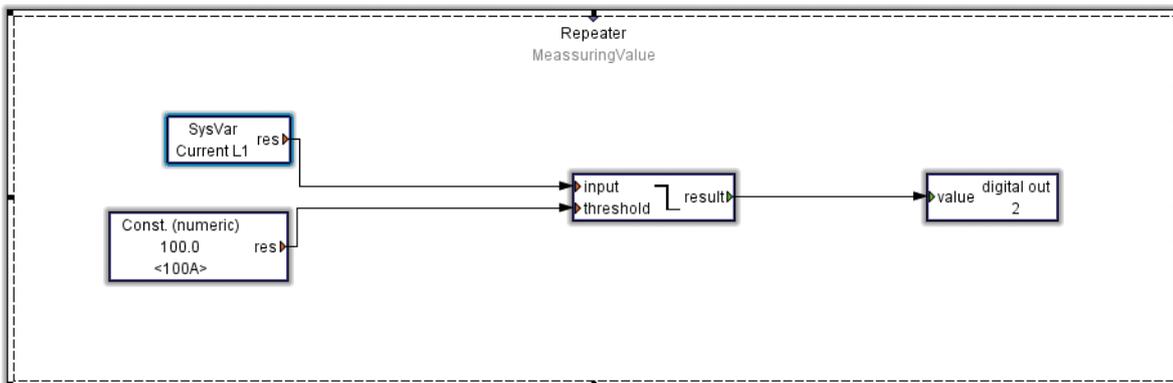

### Example 1

- Monitoring of current L1: Determination of the threshold value by means of constants, lower level 2 A, upper level 100 A
- Digital output 1 signals the exceedance of the predefined values

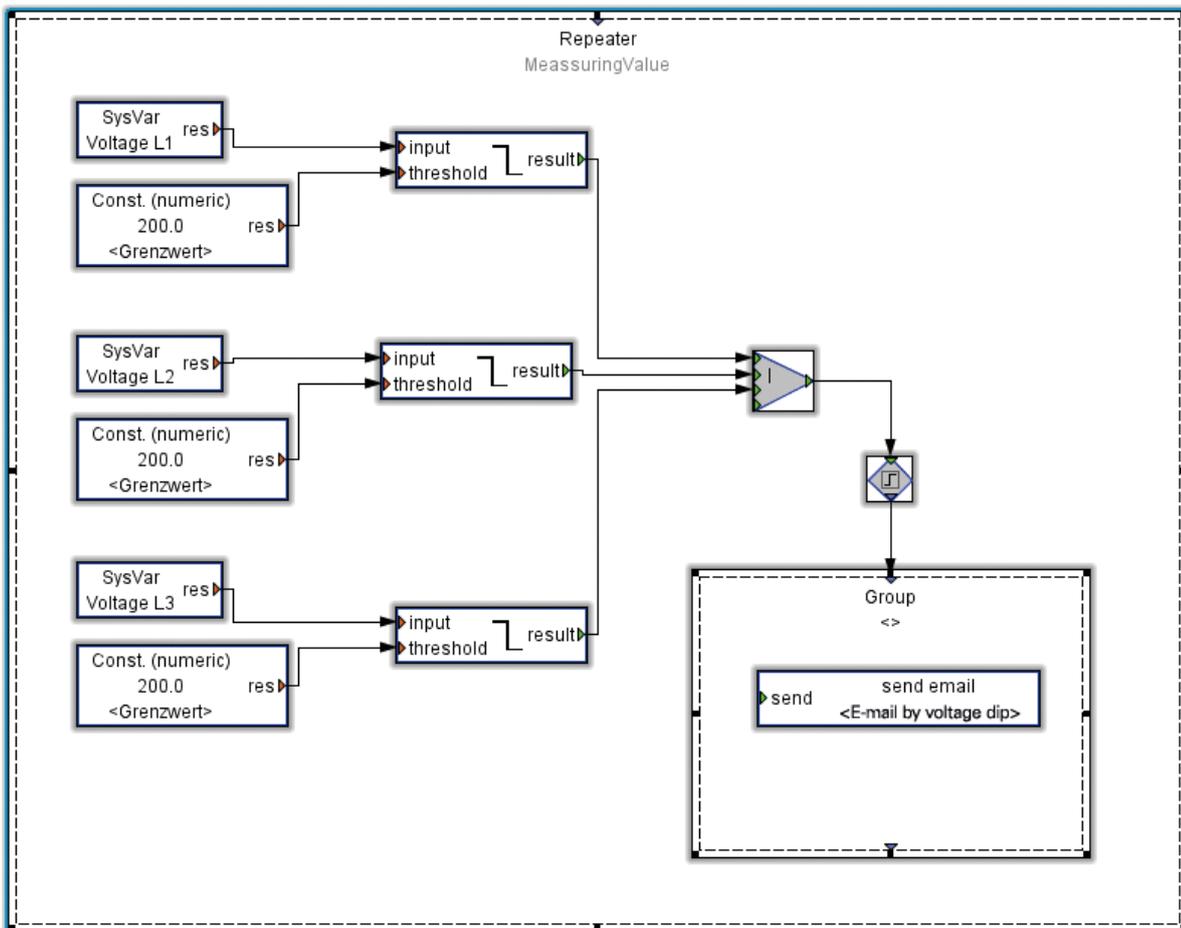

### Example 2

- Works with only one lower threshold (in this case 100 A)
- In the event of the current dropping below 100 A, digital output 2 will be activated

Example 3

- An email will be sent in the event of the value dropping below the predefined setting
- In this example the email will be sent with an undervoltage of < 200 V in phases L1, L2 or L3
- Additional information: Voltage values from the 3 phases at the time of the undervoltage

# APPs – expansions with know-how

# Software based expansions for the measurement devices

- Functions integrated in the UMG device can be expanded, controlled and visualised via APPs
- Depending on the application, consisting of several Jasic®, Flash and homepage files (administration and installation implemented via GridVis® software)
- The programming language for creating APPs is Jasic®
- Alternatively, the programming can also be implemented graphically with the GridVis®
- Development of further APPs for the measurement devices by the user and third parties possible
- The creation of APPs requires programming knowledge of Jasic®, JAVA Script, JSON, AJAX or Action Script depending on the application

Overview of product variants		
Description	Suitable for	Item number
<b>Alert Messenger</b> <sup>*6</sup> Configurable Jasic® program for sending fault messages by email	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	<b>51.00.209</b>
<b>EN50160 Watchdog</b> <sup>*6</sup> Integrated "Watchdog"-function for continuous monitoring per EN 50160	UMG 605 / UMG 512	<b>51.00.264</b>
<b>Emax peak load optimization</b> <sup>*7</sup> The APP includes peak load shedding programs for the maximum monitor function (EMAX). Up to 64 switch-off stages can be implemented (depending on the hardware). The configuration and monitoring is implemented via the device's website. The shedding operations can be carried out via FBM modules (available as options), PROFIBUS or Modbus. The APP requires Emax to be enabled (subject to purchase) on the device!	UMG 604-PRO / UMG 605-PRO / UMG 508 und UMG 511	<b>51.00.235</b>
<b>Emax enabling</b>		<b>52.16.080</b>
<b>FBM10PT1000</b> <sup>*2</sup> Up to 10 additional thermistor inputs can be implemented via the RS485 interface by means of hardware expansion	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	<b>51.00.211</b>
<b>GPS Sync</b> Synchronization of the device time via digital input. For usage of the APP the GPS receiver, item no.15.06.240, is required	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 and PRO series	<b>51.00.291</b>
<b>Humidity &amp; Temperature JFTF-I</b> <sup>*3</sup> Processing and recording of up to 8 temperature / moisture sensors possible	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	<b>15.06.337</b>
<b>IEC61000-2-4 Watchdog</b> <sup>*6</sup> Integrated "Watchdog"-function for continuous monitoring per IEC 61000-2-4	UMG 605 / UMG 512	<b>51.00.265</b>
<b>IEC61000-2-4 Watchdog Light</b> <sup>*6</sup> Integrated "Watchdog"-function for continuous monitoring per IEC 61000-2-4	UMG 604 / UMG 509	<b>51.00.309</b>
<b>Measurement monitor</b> <sup>*4 *6</sup> Display of current and historical measured values in the form of diagrams on the device's own homepage	UMG 96RM-E	<b>51.00.246</b>
<b>APP Mini EnMS</b> <sup>*6</sup> Display of current and historical measured values in numbers and diagrams from a master device and max. 15 UMGs without memory, on the device's own homepage	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 und PRO-Serie	<b>51.00.266</b>
<b>Multitouch</b> <sup>*1</sup> Reading out of 30 measured values and max. 31 slave devices via RS485	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	<b>51.00.207</b>
<b>Push Service</b> <sup>*5 *6</sup> Sending data directly from the measurement device to a server without any additional software with 10 slave devices	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512	<b>51.00.238</b>
<b>Push Service + UMG 20CM</b> <sup>*5 *6</sup> Sending data directly from the measurement device to a server without any additional software For UMG 20CM queries over: UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	<b>51.00.285</b>
<b>SNMP</b> Threshold monitoring with alarm function (SNMP-Trap)	UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series	<b>51.00.310</b>

\*1 Also needed for BACnet, if slave devices have to be visualized via RS485.

\*2 Free APP for item-no. 15.06.077.

\*3 Free APP for item-no. 15.06.074.

\*4 No APP installation; device activation required

\*5 The APP Push Service is integrated in the firmware of the measuring device UMG 96RM-EL (unencrypted).

\*6 Serial number is needed

\*7 Only in conjunction with commissioning and Emax enabling (article no: 52.16.080)

## APP Fault message **Item no. 51.00.209**

- Configurable Jasic® program for sending fault messages by email
- Depending on configuration, sending of fault messages with the following events: Total harmonic distortion voltage exceeded, short-term interruption detected, transient detected
- Saving the meter readings for the event and transient messages in the Modbus register
- Option to monitor additional measured values via an interface (not included)
- Emails\*1 with consumption values for day, week and month can be sent (a non-encrypted mail server is required)
- Serial number is needed

**Suitable for:** UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series

## APP FBM10 PT1000 **Item no. 51.00.211**

- Up to 10 additional thermistor inputs can be implemented via the RS485 interface
- Hardware expansion FBM10 PT1000 – a DIN rail module with 10 PT1000 inputs – necessary for this APP

**Suitable for:** UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series

Fig.: Measured value display via the devices' homepage

## APP Humidity & Temperature **JFTF-I** **Item no. 15.06.337**

- Can process and record the measured values from up to 8 temperature/ moisture sensors (item no. 15.06.074)
- In doing so the display of the measured values is implemented via a homepage after installing the APP, or via global variables in the GridVis®
- Measured values can be saved in a second Jasic® program via the graphical programming
- Delivers two analogue 4 – 20 mA output signals, which will be processed by the function module FBM DI8AI8 (item no. 15.06.079)

**Suitable for:** UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series

Fig.: Humidity / temperature sensor JFTF -I

# APP EN 50160 Watchdog

Item no. 51.00.264 & 51.00.305

Integrated “Watchdog” function for continuous monitoring of the power quality per EN 50160. The power quality on the supply side should comply with EN 50160. This standard describes various power quality parameters for the distribution of electrical power on public power grids. EN 50160 pertains to mains voltage, i.e. the voltage measured at the mains connection point. With power quality monitoring per EN 50160, all the algorithms (including for 95% and 100% values) are integrated in the measurement device itself.

**The auxiliary voltage of the device should be buffered to ensure that power failures can be reliably detected as events.**

- Integrated watchdog function
- No need to transmit large volumes of measured data from the measurement device to a host system
- Save on communications costs for applications with remote consumers
- Simple analysis possible thanks to integrated colour display based on a “traffic light” system
- Possible to perform power quality analyses even with no particular knowledge on the topic
- No alarm functionality
- Serial number is needed

Item no. 51.00.264 suitable for: UMG 605 and UMG 512

Item no. 51.00.305 suitable for: UMG605-PRO and UMG 512-PRO

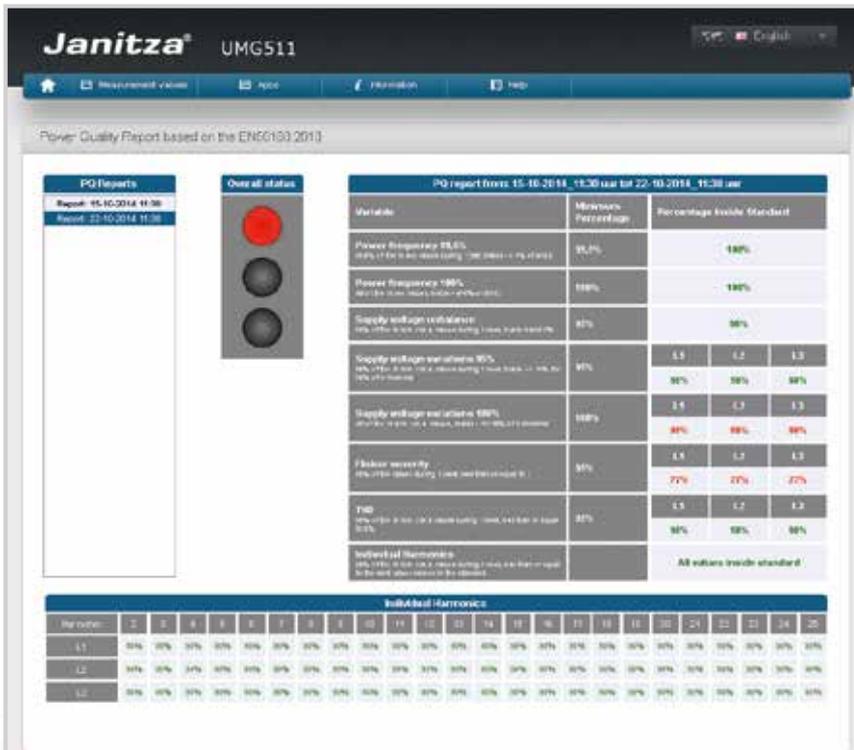

Fig.: APP Power Quality Report based on the EN 50160

# APP IEC 61000-2-4 Watchdog

Item no. 51.00.265 / 51.00.306 / 51.00.309 / 51.00.308

Integrated "Watchdog" function for continuous monitoring of the power quality per IEC 61000-2-4. The standard IEC 61000-2-4 defines numerical limits for industrial and private power distribution systems at rated voltages up to 35 kV. For the consumer, the standard IEC 61000-2-4 should be applied with reference to power quality. Therefore the power quality in all technical systems must be continuously monitored in accordance with IEC 61000-2-4, in order to ensure fault-free operation of the installed system.

**The auxiliary voltage of the device should be buffered to ensure that power failures can be reliably detected as events.**

- Integrated watchdog function accordance with standard IEC 61000-2-4
- No need to transmit large volumes of measured data from the measurement device to a host system
- Save on communications costs for applications with remote consumers
- Simple analysis possible thanks to integrated colour display based on a "traffic light" system
- Possible to perform power quality analyses even with no particular knowledge on the topic
- No alarm functionality
- Serial number is needed

Item no. 51.00.265 suitable for: UMG 605 and UMG 512

Item no. 51.00.306 suitable for: UMG 605-PRO and UMG 512-PRO

Item no. 51.00.309 suitable for: UMG 604 and UMG 509

Item no. 51.00.308 suitable for: UMG 604-PRO and UMG 509-PRO

Fig.: APP Power Quality Analyse acc. to IEC 61000-2-4

## APP Measurement monitor Item no. 51.00.246

The “Measured value monitor” APP allows you to display current and historical measured values, in the form of diagrams, on the homepage of a Janitza UMG device. User-friendly controls mean you can create diagrams quickly and easily.

- Fully web-based, you only need a web browser
- Can be run on desktops, laptops, tablets etc.
- Access the most important current and historical measured values
- Easy operation with drag & drop
- Up to 6 measured values in a diagram (2 Y-axes)
- Up to 60,000 data points in a diagram (10,000 per measured value)
- Serial number is needed

**Suitable for:** UMG 96RM-E

Fig.: APP Measurement monitor

# APP Multitouch Item no. 51.00.207 & 51.00.293

- Reads out 30 measured values (fixed default value) from up to 31 slave devices (configurable) via RS485
- Filing of the measured values in the master in global variables or on BACnet data points
- Display of the measured values is implemented via the JPC35 touch panel or via the device homepage (browser with FLASH plug-in necessary)
- Expansion for live value display
- Integrated BACnet gateway function (option, item no. 52.16.083)
- The BACnet-ID can be changed via the homepage
- Program installs a control program
- Possible communications fault (RS485-Bus) directly visible via a status display
- The number of devices and device descriptions can be configured via the master devices homepage
- The master device is automatically recognised and entered in the "Device type" field
- The BACnet configuration is likewise implemented via the master device homepage
- Each device can be assigned its own BACnet-ID
- EDE file for the import of the BACnet data points in a BACnet-GLT is included in the scope of deliverables for the APP

Item no. 51.00.207 suitable for: UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series

Item no. 51.00.293 suitable for UMG 20CM queries via: UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series

Fig.: Multitouch APP: Slave measurement devices overview on the master device homepage, e.g. up to 31 UMG Modbus slaves can be displayed via a UMG 604-PRO master device

Fig.: Display of measured values for an individual slave device

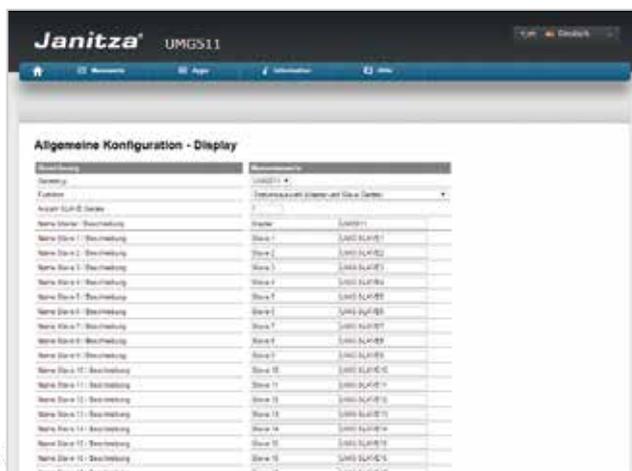

Fig.: General configuration of the monitoring master/slave devices

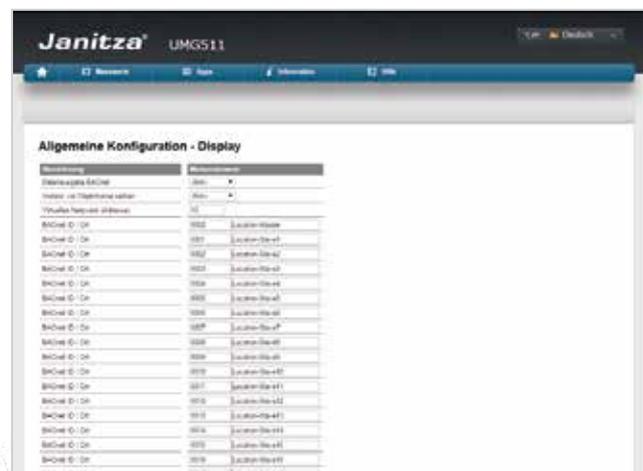

Fig.: General BACnet configuration

## APP Push Service 2.0 Item no. 51.00.238 & 51.00.307

### Applications

- Sending data directly from the device to the energy portal (without additional software)
- The delivery of data is implemented via port 80
- Data can be saved in a MySQL database automatically
- Data can be visualised via a web server by means of a web browser
- An APP must be installed on each device
- Only Jasic-capable devices are supported (UMG 604-PRO / UMG 605-PRO / UMG 508 / UMG 509-PRO / UMG 511 / UMG 512-PRO)
- UMG 96RM-EL with integrated Push App function is supported
- Prodata and UMG 20CM – only via Jasic®-capable devices

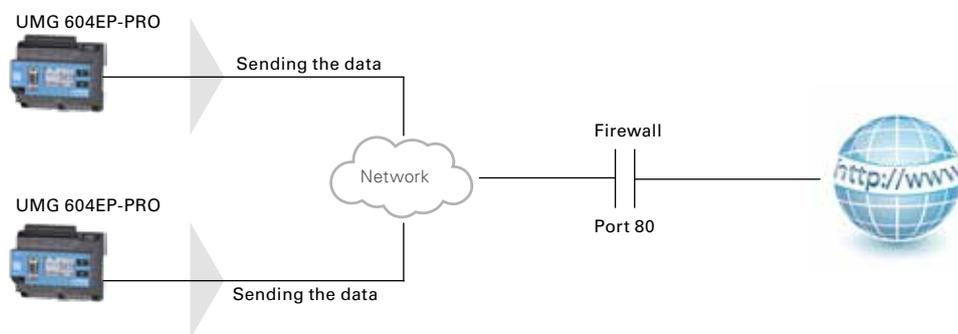

Fig.: Sending the content of the memory for the web application

### Properties

- Sending of up to 25 measured values is possible simultaneously
- Delivery of the last mean values from the ring buffer
- APP automatically detects which data in the ring buffer is saved with which averaging time, and presents these for selection
- The measured values to be sent can be selected via the homepage
- Mean values are automatically synchronised to the device time
- The transmission time can be adjusted for the transmission buffer. In the event of the network connection failing, there are no gaps in the data so long as the failure is shorter than the transmission buffer time
- View of a status display on the homepage with the last data transmitted
- Setting of a daily status email to verify a successful sending process (optional)

### Advantages

- Less data traffic
- Multiple devices can send data simultaneously
- The transmission string can be easily modified to suit individual requirements
- Thus there is an option to send data from external software
- The sending of data is implemented via port 80 (generally enabled with firewalls)
- Decentralisation and thus less susceptible to interference
- The transmission of data can be implemented as randomly controlled, so that there will be no overlapping
- Simple configuration

### Overview of the main features of the APP Push Service 2.0

- Sending of up to 25 measured variables to a "software as a service" program
- Time intervals adjustable via port 80 (via HTTP/Json)
- Configuration implemented via the device website
- APP will be delivered, encrypted, linked to an individual serial number of the UMG device (provision of the serial number necessary)
- Serial number is needed

**Item no. 51.00.238 suitable for:** UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 and UMG 512

**Item no. 51.00.307 suitable for:** UMG 604-PRO / UMG 605-PRO / UMG 509-PRO and UMG 512-PRO

Fig.: Push Service 2.0 UMG 604-PRO

The screenshot shows the configuration interface for the APP Push Service 2.0. It is divided into several sections:

- Server Apikey for identifying the sender:** A field for entering the API key.
- Setting of transmission buffer and transmission interval:** Fields for configuring the transmission buffer and the interval between transmissions.
- Server IP address:** A field for entering the IP address of the server.
- Selection of the measured values to be transmitted:** A list of measured values with checkboxes, indicating that only previously configured values will be displayed.

Fig.: Convenient configuration of the APP Push Service 2.0

## GPS Sync Item no. 51.00.291

- Synchronisation of the device time via digital input
- No NTP server required
- Easy installation
- Accuracy +/- 1 s per GPS synchronization
- A GPS receiver (item no. 15.06.240), available as an accessory, is required
- This APP is not required for the UMG 512-PRO because the GPS receiver can be connected to the digital input 1 without an APP on the UMG 512-PRO

**Suitable for:** UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 and PRO series

## SNMP Item no. 51.00.310

- The “Limit value alarm via SNMP” application monitors the settings made on the weg page and in GridVis® and sends an SNMP trap when it is exceeded.
- Freely adjustable trap number
- Until two hosts settable

**Suitable for:** UMG 604 / UMG 605 / UMG 508 / UMG 509 / UMG 511 / UMG 512 and PRO series

The screenshot shows the 'SNMP Konfiguration' page. It includes a table for host addresses, a 'Grenzwerte' section with input fields for 'Minimalwert' and 'Maximalwert' for 'Leistung' and 'Frequenz', and a 'Traps' section with checkboxes for 'Spannungsausfall', 'Überspannung', 'Frequenzabweichung', 'Leistungswertung', 'Unterspannung', 'Überspannung', 'Transiente', and 'Heizlast-Wachlog'. A 'Übernehmen' button is located at the bottom right.

Fig.: Configuration page on an UMG **without** RCM functionality

This screenshot is similar to the previous one but includes an 'RCM' checkbox in the traps section. The 'Leistung' limit values are set to 0. The 'Übernehmen' button is at the bottom right.

Fig.: Configuration page on an UMG **with** RCM functionality

# APP Mini EnMs Item no. 51.00.266

With the “Mini EnMs” APP you can set up a small, local, web-based energy management system for a maximum of 16 Janitza devices without memory. Online and historical data from the master and slave devices are displayed via the web-based user interface. The master device also acts as a data collector for the slave devices.

- Optimised for use on desktops, laptops or tablets
- Select measured variables for the master device and slave devices using drag & drop
- Select the desired time window with the integrated calendar function
- The main variables of the Modbus slaves are stored and displayed on the “main measurement device”
- No external server or software package needed; just a standard browser will suffice
- Maximum of 16 slaves (UMG 103-CBM, UMG 104 or UMG 96RM)
- Memory variables for slave devices
  - Current L1, L2, L3
  - Total effective power
  - Total apparent power
  - Total effective energy
- The master collects the data and presents it on its own device homepage. The APP was developed for small applications where GridVis® ist not being used.
- Serial number is needed

**Suitable for:** UMG 604-PRO / UMG 605-PRO / UMG 508 / UMG 509-PRO / UMG 511 / UMG 512-PRO

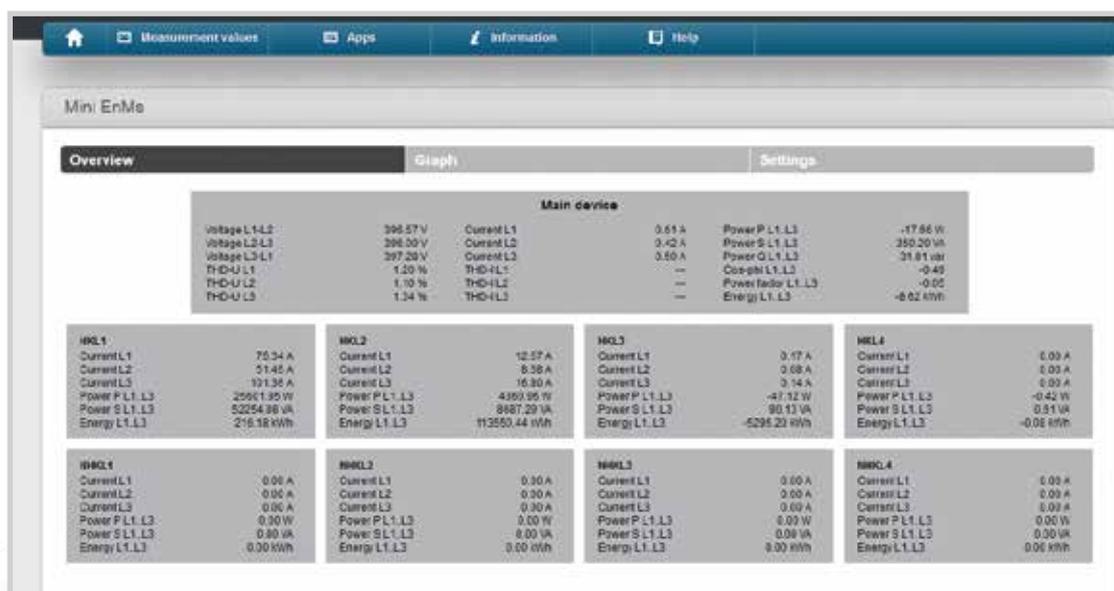

Fig.: APP Mini EnMS

# Device homepage

Power management and power quality analysis online

The device-specific homepage for the measuring devices is ideal for users or target groups within a company, who do not wish to install the GridVis® software or do not require it. For access to this, the user simply requires a conventional web browser and an Ethernet connection (or a local patch cable). The screens have been graphically revised and have now been made even more user-friendly. Each measuring device has an integrated web server, which makes a separate, password-protected homepage available. It is possible to operate the device just as comprehensively via this, as via the device display. Furthermore, extensive online and historic measuring data (standard power consumptions), including the power quality analysis, can also be called up. It is even possible to control the measuring device remotely and configure it via the display indications. Because a multitude of PQ measured values can be displayed in addition to the countless standard electrical values, for many users the measuring device homepage constitutes the basic configuration for a monitoring system.

- Access to the powerful meter-homepage via web browser
- No software installation necessary
- Real-time data, historical data etc. directly accessible via the meter home page
- Function extension via APPs possible
- Remote control of device display via homepage
- Password protection possible

Fig.: IEC 61000-2-4 analysis with traffic-light principle

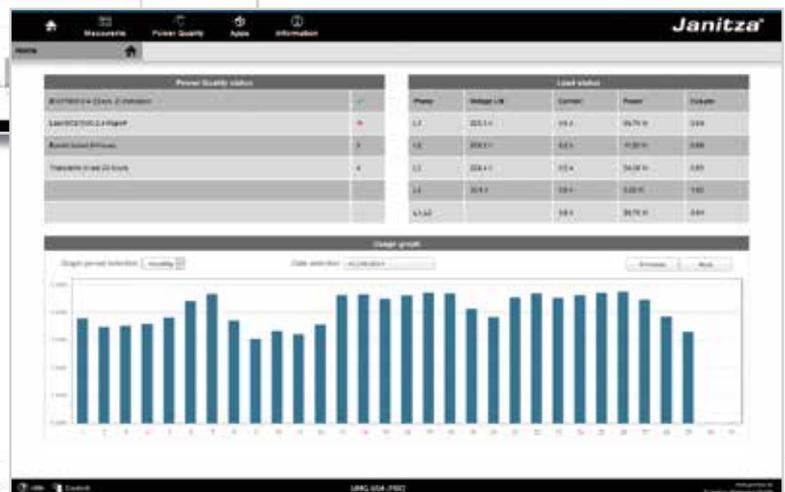

Abb.: Power Quality Statusübersicht

[www.Energy-Portal.com](http://www.Energy-Portal.com)

# Energy-Portal

## The cloud solution for energy management

- Cloud solution especially designed for energy data
- Access from anywhere in the world via the PC or tablet under [www.energy-portal.com](http://www.energy-portal.com)
- Evaluating and displaying energy data from the UMG measurement devices without requiring an IT infrastructure or expensive software
- The energy data can be pushed directly into the Energy-Portal from one location or from several locations.
- Measured values are captured at the same time from various locations
- Saves high acquisition and operating costs for software, database, server, commissioning and software maintenance
- Intuitive operation
- Data is extremely secure (HTTPS)
- Extremely cost-effective and convenient solution
- Lower data volume due to the push function

## APP Push Service 2.0 characteristics

- Up to 25 measured values per measuring device can be sent simultaneously
- After installing the APP and configuring the device's memory, the measured values that are to be sent can be selected on the measurement device homepage.
- Up to 50 measurement devices can be managed per account.
- Up to 25 measured values per measurement device can be sent simultaneously
- Mean values  $\geq 10$  minutes can be selected.
- Up to 100 dashboards are possible per account
- The APP Push Service 2.0 sends the measured data automatically to the "www.energy-portal.com" hosting server in cycles. The APP Push Service 2.0 sends the measured data automatically to the "www.energy-portal.com" hosting server in cycles.
- The measured data can then be evaluated from anywhere in the world using any web browser.
- Transferring the last measured values from the UMG ring buffer
- The APP automatically detects which measured data in the UMG ring buffer is saved with which averaging time, and presents it for selection
- The measured values to be sent can be selected via the UMG measurement device's homepage
- Mean values are automatically synchronised to the device time
- The sending time can be adjusted for the transmission buffer (1 hour – 100 days). If the communication connection fails, there are no gaps in the data as long as the failure is shorter than the transmission buffer time
- The transmission interval is adjustable (1 second – 30 minutes)
- Status indicator on the homepage shows the last measured data transmitted

**What does the solution include?**

- Server capacities, processing power (IaaS)
- Database storage capacities
- Data backup
- APP Push Service 2.0 to be installed on the UMG measurement devices
- Software as a service (SaaS): Provision of appropriate standardised visualisation software for energy consumption evaluation
- Quick and simple summarization of all energy data from different locations

Fig.: Example of a dashboard with a line chart (load profile) and the power value displayed using an analogue pointer display.

Fig.: Benchmark for the production sites with level displays. The limit values can be adjusted individually for each of the locations.

Fig.: Heat map (spectral analysis) to determine peak loads that drive costs. The scroll bar in the chart's header area can be used to adjust the threshold values individually.

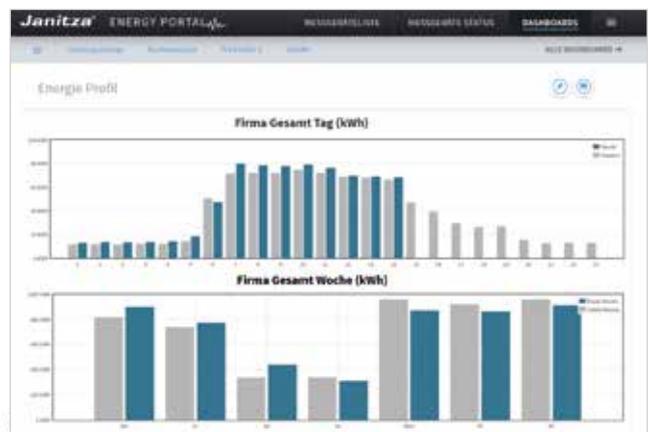

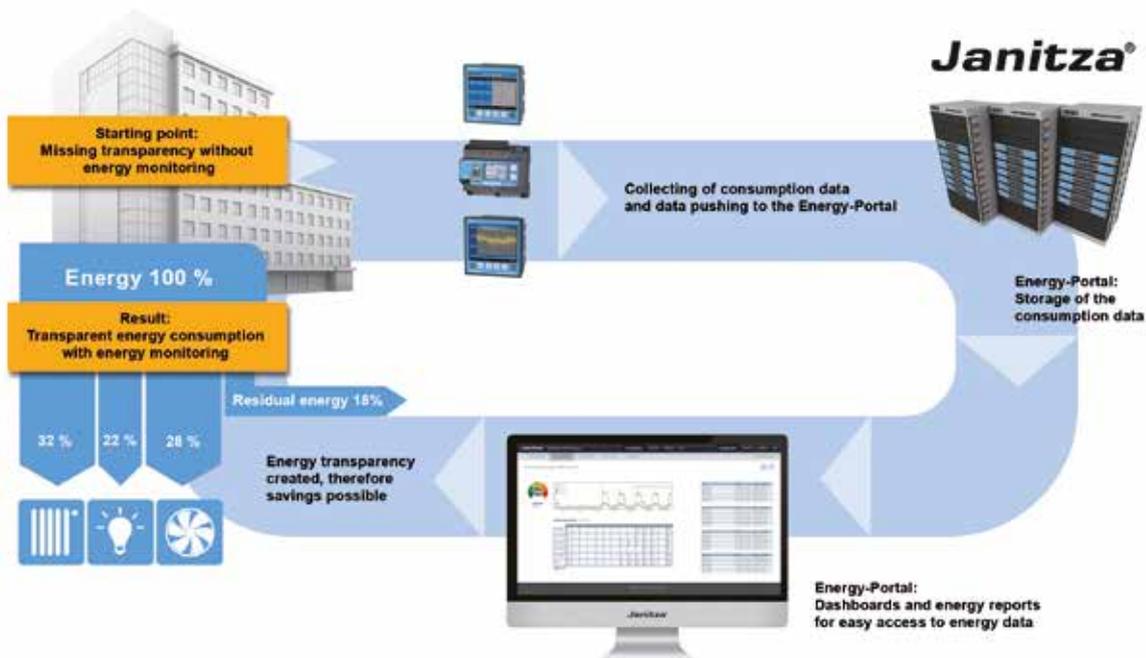

Fig.: Dashboard example with two bar charts to compare el. energy values from the current day with the previous day or the current week with the previous week.

\*1 The APP Push Service 2.0 is integrated in the firmware of the measuring device UMG 96RM-EL (unencrypted).

# OPC UA SERVER

# OPC UA Server

## Increase your connectivity

Increase the connectivity of the GridVis® with the new OPC UA server. In addition to the OPC UA client (available as of July 2018, starting with version 7.3), Janitza offers you an OPC UA server. With this expansion, we enter the next step of connectivity within GridVis®. Customers will then be able to exchange all kinds of measuring values, KPIs and any kind of process parameters via OPC UA ITEMS (Tags). The additional installed OPC UA server comes with an embedded driver to communicate directly with GridVis. No programming necessary. Online values of all metering devices which are connected to GridVis® will be easily available for different kinds of third party software applications as OPC UA Clients, SCADA Systems, ERP System or central building control systems. On top, the OPC UA server has a built-in direct driver connection to KNX, SNMP and BACnet clients. With the new OPC UA server, customers will have an obvious advantage by a minimum of engineering effort. Compared to existing solutions, one can simply integrate complete projects in less than no time instead of a step by step connection to single components.

The OPC UA server is not a part of a GridVis® edition. It can be purchased as an option.

We would be happy to create an offer for you.

Description	Item no.
OPC UA Server 250	51.00.151
OPC UA Server 1000	51.00.152
OPC UA Server 2500	51.00.153
OPC UA Server 10000	51.00.154

# DATABASE SERVER

# Database server

## Comprehensive monitoring and analyses require powerful server solutions

- Janitza electronics GmbH offers a powerful server as a complete solution
- Trouble-free and immediate use is guaranteed
- Simple and rapid integration of the pre-configured server into the existing network
- GridVis® software is already installed on the database server
- Available databases: Janitza DB, MS SQL or MySQL
- Application of a powerful tower or rack server from Dell
- The Dell PowerEdge server offers high quality and reliability with maximum expandability
- A RAID-10 system with hot-plug hard drives guarantees a high standard of data security

Fig.: Server (tower)

## Guaranteed all-round service

- Access to the database server thanks to Janitza maintenance diagnostics and fault rectification (only with authorisation)
- Rapid diagnostics and rectification of problems possible
- Highest level of security: Use of common remote maintenance solutions with three-stage encryption per industry standards

Fig.: Server (rack)

## For larger projects we currently recommend the following configuration:

- Current Intel processor
- 16 GB RAM
- RAID controller
- RAID 10 with 4 hard drives, 1 TB capacity each
- DVD-ROM drive
- Windows 2008 Server with 5 CALs, 64 Bit (German or English version)
- Installation of GridVis® software and the database driver for SQL servers
- MySQL / MS SQL databases should be provided by the client
- The integration of the server into the company's own network must be implemented by the customer's own administration

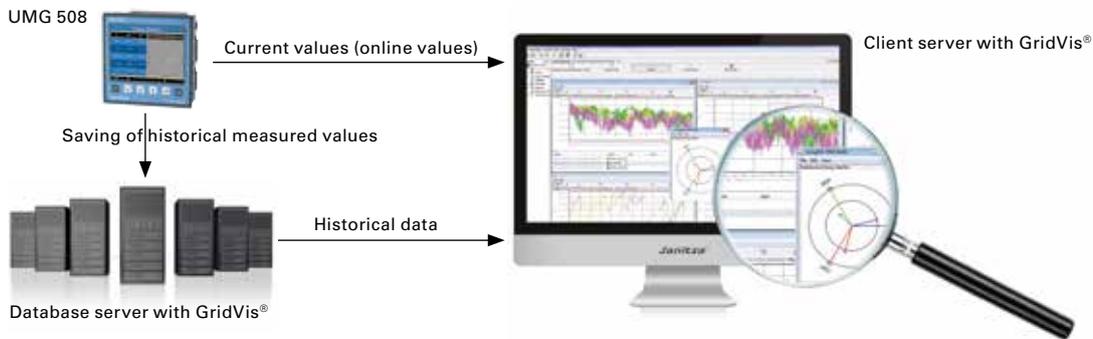

Fig.: The UMG 508, for example, currently has 6 communication ports. Of these, two are designed as gateways (port 8000) for downstream RS485 devices.

### Areas of application

- With extensive monitoring systems with a large number of measurement devices
- For applications that require a high degree of data security and maximum performance
- With companies whose systems must be scalable and expandable

### Application

- GridVis® runs as a service on the server
- Log-in of a user not required for automatic data logging
- For measured value analysis the client computer accesses the server directly via the network
- Access to measurement data within the database by any number of client systems possible
- Display of online measurement values dependent of the number of ports per device, i.e. visualisation of historical data via the database, online measurement values available direct from the UMG device

## Chapter 04

### Database server

Product overview		
Description		Item no.
Server (tower)	<ul style="list-style-type: none"> <li>• Current Intel processor</li> <li>• 16 GB RAM</li> <li>• RAID controller</li> <li>• RAID 10 with 4 hard drives, 1TB capacity each</li> <li>• DVD-ROM drive</li> <li>• Incl. mouse and keyboard with german layout</li> </ul>	<b>15.06.352</b>  (Windows version, German)
	<ul style="list-style-type: none"> <li>• Windows 2012 Server with 5 CALs, 64 Bit (German or English version)</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• GridVis® software and database driver for SQL server</li> <li>• MySQL / MS SQL databases should be provided by the customer</li> <li>• The integration of the server into the company's own network must be implemented by the customer's own administration</li> <li>• Warranty from Dell GmbH</li> </ul>	<b>15.06.353</b>  (Windows version, English)
Server (rack)	<ul style="list-style-type: none"> <li>• Current Intel processor</li> <li>• 16 GB RAM</li> <li>• RAID controller</li> <li>• RAID 10 with 4 hard drives, 1TB capacity each</li> <li>• DVD-ROM drive</li> </ul>	<b>15.06.354</b>  (Windows version, German)
	<ul style="list-style-type: none"> <li>• Windows 2012 Server with 5 CALs, 64 Bit (German or English version)</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• GridVis® software and database driver for SQL server</li> <li>• MySQL / MS SQL databases should be provided by the customer</li> <li>• The integration of the server into the company's own network must be implemented by the customer's own administration</li> <li>• Warranty from Dell GmbH</li> </ul>	<b>15.06.355</b>  (Windows version, English)
Setup package 1 for MS SQL	<ul style="list-style-type: none"> <li>• Install hard drives</li> <li>• Install operating system</li> <li>• RAID configuration (RAID 10)</li> <li>• Install updates</li> <li>• Install MS SQL Server*</li> <li>• Install GridVis®</li> </ul>	<b>51.01.018</b>
Setup package 2 for My SQL	<ul style="list-style-type: none"> <li>• Install hard drives</li> <li>• Install operating system</li> <li>• RAID configuration (RAID 10)</li> <li>• Install updates</li> <li>• Install MySQL Server*</li> <li>• Install GridVis®</li> </ul>	<b>51.01.019</b>
Setup package 3 for JanDB	<ul style="list-style-type: none"> <li>• Install hard drives</li> <li>• Install operating system</li> <li>• RAID configuration (RAID 10)</li> <li>• Install updates</li> <li>• Install JanDB</li> <li>• Install GridVis®</li> <li>• Install RTP user</li> </ul>	<b>51.01.023</b>
